VI. PERMIT TRANSFERS FROM ALASKA RURAL LOCALS TO OTHER RESIDENT TYPES

VI. PERMIT TRANSFERS FROM ALASKA RURAL LOCALS TO OTHER RESIDENT TYPES

The long-term effects of limited entry on rural coastal fishing communities have been of considerable interest to the legislature, the administration, and the public, especially the degree to which limited entry permits have been transferred away from rural fishing communities. From 1975 through 2005, over two-thirds (67.8%) of the 10,170 transfers made by Alaska rural locals have been to other Alaska rural locals. This percentage has been relatively consistent, ranging from a low of 62.2% in 1982 to a high of 74.8% in 1999 (Table 5). The remaining 32.2% (3,271) of the transfers since 1975 have been to other resident types (cross-cohort transfers). This section will present information regarding only the cross-cohort transfers from Alaska rural local residents (ARLs).

Transfer Activity Away From Alaska Rural Locals

In many years, ARLs have transferred more permits to other resident types than other resident types have transferred to them, resulting in a net decrease in ARL-held permits (Table 24). Through 2005, this cross-cohort transfer activity has resulted in a net decrease of 605 transferable permits held by ARLs. Each of the other resident types show a net increase of transferable permits through their transfer activity with ARLs. The net increases were as follows: permits held by Alaska urban nonlocals increased 221 permits; permits held by nonresidents increased 179 permits; permits held by Alaska rural nonlocals increased 75 permits; and permits held by Alaska urban locals increased 82 permits. Note that permits held by each of the resident types may have increased or decreased in exchanges with resident types besides ARLs (Table 5).

From 1976 through 1986, net shifts of permits away from ARLs due to transfer activity ranged from 22 to 94 permits per year. The annual net decreases have generally been less since the late-1980s. ARL-held permits have increased in each year between 1997 and 2005 as the net result of transfer. In 2000 transfer activity resulted in a net increase of 49 permits for ARLs, the largest increase over the 1975-2005 period.

Net transfer activity of ARL permits is presented in Table 25 for each permit type for all years combined. Similar data are presented in Appendix D by permit type and year. The Bristol Bay

¹ If there have not been any transfers of a particular permit type, that permit/fishery will not be listed on the tables.

drift and set gillnet permit types have had the largest net decreases in ARL-held permits due to transfer activity (244 and 162 permits, respectively).

While the Bristol Bay permit types have had the highest numerical decreases in the number of permits held by ARLs, other permit types have had larger proportional decreases. There are 3 permit types (other than Bristol Bay permit types) with more than 4 permits issued to ARLs that indicate net decreases greater than 25%. These are the Southeast Alaska salmon purse seine, Prince William Sound salmon setnet, Peninsula/Aleutian salmon seine, and Peninsula/Aleutian salmon drift gillnet fisheries. Transfers to the DCCED or CFAB through loan foreclosures and subsequent resale by these agencies are responsible for a net decrease of 48 ARL permits. The original 19 salmon fisheries limited in 1975 account for a net decrease of 46 ARL permits through transfer to DCCED or CFAB. A net increase in ARL permit holdings due to resale from DCCED or CFAB are seen in 4 of the original 19 salmon fisheries limited in 1975, two herring fisheries limited in 1977-1978, a pound fishery limited in 1980-1987, and a Dungeness pot fishery limited in 1997.

Table 26 provides information concerning the relationships between transfer parties for 2,562 ARL cross-cohort transfers that occurred over the 1980-2005 time period for which there were transfer surveys. The information comes from the CFEC transfer survey. As might be expected, most (62.4%) cross-cohort transfers of ARL-held permits were between persons who had no previous relationship.²

Permit Financing Methods

The methods used to acquire permits through transfers from ARLs to other resident types for the 1980-2005 period are presented in Table 27. Most (77.3%) of these cross-cohort transfers were sales (1,980 of 2,562) but considerable variation occurs across all limited entry fisheries. Other acquisition methods in the CFEC transfer survey include gift, trade, and other.

Transfer survey information on financing methods used in permit sales from ARLs to other resident types is provided in Table 28 by permit type and year. The major source of financing has been the personal resources of the buyer (66.0%). The percentage of each source of financing varies considerably among the fisheries, however.

² The relationship question in the Transfer Survey form was reworded in October 1983 from "friend" to "personal friend." This rewording may be responsible for part of the increase in the percentage of "other" responses after 1983.

The survey information also indicates that since 1984 there has been a sharp decrease in the number of sales of ARL-held permits financed by the transferor. There have not been any ARL-held permits financed by the transferor in the last 10 years.
