# EXECUTIVE SUMMARY

# CHANGES IN THE DISTRIBUTION OF ALASKA'S COMMERCIAL FISHERIES ENTRY PERMITS, 1975 to 2005

CFEC Report Number 06-2N-EXEC

Alaska Commercial Fisheries Entry Commission 8800 Glacier Highway, Suite 109 P.O. Box 110302 Juneau, Alaska 99811-0302 (907) 789-6160

This report provides detailed information on changes in the distribution of permanent permits in Alaska's limited fisheries. From 1975 through 2005, 79 permit types have been issued in 65 fisheries. The report provides both statewide and fishery-specific data on the number of permit transfers, the geographic distribution of permit holders, changes due to permit transfers, changes due to the relocation of permit holders and the year-end 2005 geographic distribution of permit holders.

The report also includes extensive information on the age of permit holders, age differences between transferors and transfer recipients, the incidence of intra-family and business partner transfers, transfer acquisition methods, and financing of permit purchases. The information contained in the report is derived from the Commercial Fisheries Entry Commission's (CFEC) permit and transfer survey files.

The report includes 2 separate documents: an executive summary and the principal report, which is primarily a reference document.

34	Endnotes

In 1972, voters amended Alaska's constitution to allow limited entry into the state's commercial fisheries. Following this amendment, in 1973 the State Legislature enacted Alaska's Limited Entry Act (AS 16.43), creating the state's limited entry program and giving the Commercial Fisheries Entry Commission (CFEC) the responsibility for administering the program.

Limited entry was implemented in 19 of the state's salmon fisheries in 1974. By the end of 2005, entry permits had been issued in a total of 65 commercial fisheries: 26 salmon fisheries, 19 herring fisheries, 9 crab fisheries, 5 sablefish fisheries, 3 shrimp fisheries, and 3 dive fisheries. In some limited fisheries, more than one type of permit was issued to help contain increases in fishing power. Some permits constrain the amount of gear that can be used and some permits constrain the length of the vessel. To date, a total of 79 permit types have been issued in the 65 limited fisheries.

A legal prerequisite of the Limited Entry Act was that permits could not be locked in the hands of those who were originally issued them (i.e., the "initial issuees"). After much study and debate, the legislature chose free transferability as the method for allowing permit holders to enter and exit the fisheries.

Free transferability allows the transfer of permits from parents to their children and allows family members to inherit a permit upon the death of a permit holder. It allows fishermen to enter and exit fisheries at times opportune to them, and eliminates the need for an expensive and time-consuming bureaucratic process to handle permit reallocation. Many other transfer options were considered but were found lacking with respect to these criteria.

In 1983 the Alaska State Supreme Court decided State of Alaska v. Ostrosky, which challenged the constitutionality of the Limited Entry Act, particularly the free transferability provisions. The court upheld the constitutionality of both the Act and of free transferability. and also affirmed the legislative objectives adopting in the transferability option. The decision was subsequently allowed to stand by the United States Supreme Court when it dismissed the Ostrosky appeal in Ostrosky v. State.

Despite the benefits of free transferability, many people remain concerned that permit result transfers might in undesirable consequences with regard to the distribution of permits. There is a concern that permits will leave the state, or that permits will disappear from isolated fishing communities which are local to a limited fishery, thereby eroding the economic base. Because of these concerns about free transferability, CFEC has produced this updated report so that the legislature, the administration, and other interested parties will be kept accurately apprised of the facts.

This edition of *Changes in the Distribution of Alaska's Commercial Fisheries Entry Permits* has been published as two separate documents. This executive summary provides summary tables that address the most common questions about limited entry permits and the effects of permit transfers and migration of permit holders on the geographic distribution of permit holdings. The principal report is primarily a reference document and includes more detailed fishery-specific and time series tables on the topics addressed in the executive summary. It also contains special sections on rural permit holders and on permit holders who live locally to fisheries where they hold permits.

Both the executive summary and the principal report cover all the limited fisheries and permit types for which permanent permits have been issued from 1975 through 2005. Updated information from Census 2000 is used to determine rural and urban classifications.

The CFEC issues both transferable and nontransferable permits in the state's limited fisheries; therefore, not all permits are available for transfer. The Limited Entry Act requires CFEC to initially allocate permits using hardship ranking systems, often called "point systems," which rank individuals based upon the relative hardship they would suffer if they were denied a permit. The Act also requires CFEC to determine levels within the systems where point persons would experience only minor economic hardship if excluded from the fishery. Persons who receive permanent permits and who are ranked at or below the minor economic hardship level receive nontransferable permits. From 1975 through 2005, 16,264 permanent limited entry permits were issued in 65 fisheries: 14,033 permits were fully transferable,<sup>1</sup> and 2,231 were nontransferable.

Some permits for a fishery may be initially issued several years after the main body of permits has been issued. This is because some applicants are difficult to classify under a hardship ranking system, and a final determination of their standing may come only after an extensive hearing and adjudication process. In other instances, permits have been issued at a later date as the result of lawsuits brought against CFEC.

# **Permit Transfers**

During the 1975-2005 time span there were 30,980 permanent permit transfers. At the end of year 2005, there were 13,653 transferable

permits, and original permit holders had transferred 10,964 permits, indicating that approximately 80.3% of all transferable permits had changed hands at least once. Over the entire period, the average annual number of transfers per number of transferable permits was 8.6% (30,980 total transfers / 362,290 sum of all annual transferable permits).

# Transfer Rates

Two types of annual transfer rates are shown in Table 1. The first is the ratio of permits transferred for the first time to the total number of transferable permits. Permits transferred for the first time are those that are held by initial issuees. Over time, this ratio would decline if no new permits were issued because each year there would be fewer permits held by initial issuees. This transfer ratio has declined from 0.08 to 0.01 over the 1975-2005 period. Over this same period, the average annual ratio of transfers from initial issuees to transferable permit years is 0.03.

The second type of annual transfer rate reported in Table 1 is the ratio of all transfers to available transferable permits, which provides a measure of the annual turnover rate for all transferable permits. This ratio varied between 0.06 and 0.13 over the 1975-2005 time period, and averaged 0.09 for all years combined.<sup>2</sup> As can be seen in Table 1, this transfer ratio dropped below the all-years average in 1989 and has remained relatively low through 2005.

Year	Number of Permanent Permits *	Number of Transferable Permits *	Annual Number of Transfers From Initial Issuees	Ratio of Transfers From Initial Issuees to Transferable Permits	Total Annual Number of Transfers **	Ratio of Transfers to Transferable Permits
1975	6,762	6,762	568	0.08	590	0.09

TABLE 1.         Statewide Transfer Data on Permanent Permits by Year, 1975-2005
--

	Sum of Annual Transferable	Total Transfers From Initial		Total Number of	
Years	Permits	Issuees	Ratio	Transfers	Ratio
1975 - 2005	362,290	10,964	0.03	30,980	0.09

Notes:

\* 1,812 permits have been cancelled. Except for 84 that were reinstated, these have been excluded from the year of cancellation forward.

\*\* The number of transfers includes 313 loan foreclosures by the Department of Commerce, Community and Economic Development or by the Commercial Fishing and Agriculture Bank, and 247 subsequent transfers from these entities.

# GEOGRAPHIC DISTRIBUTION OF PERMITS: CHANGES DUE TO TRANSFERS, MIGRATIONS, AND CANCELLATIONS

# Classification of Permits and Permit Holders

This report measures changes in permit distribution by classifying permit holders based upon where they reside. Five resident type classifications have been defined. Permit holders who reside in Alaska are classified into "rural" or "urban" and "local" or "nonlocal" groups. Nonresidents are classified into a single category. The resident types and their acronyms are listed below:

**ARL**: *Alaska* resident of a *Rural* community which is *Local* to the fishery for which the permit applies;

**ARN**: *Alaska* resident of a *Rural* community which is *Nonlocal* to the fishery for which the permit applies;

**AUL**: *Alaska* resident of an *Urban* community which is *Local* to the fishery for which the permit applies; <sup>3</sup>

AUN: *Alaska* resident of an *Urban* community which is *Nonlocal* to the fishery for which the permit applies;

NR: Nonresident of Alaska.

**DCCED / CFAB**: Signifies permits which have been foreclosed upon by the Alaska Department of Commerce, Community and Economic Development (DCCED) or by the Commercial Fishing and Agriculture Bank (CFAB), and have yet to be transferred. An example of how this classification works could be a permit holder who lives in Dillingham and who holds two limited entry permits. If one permit is for the Bristol Bay drift gillnet fishery, it will be classified as a permit held by an Alaska rural local because Dillingham is a rural community and is local to Bristol Bay. If the other permit is for the Cook Inlet herring seine fishery, then that permit will be classified as one held by an Alaska rural nonlocal because Dillingham is rural, but not local to Cook Inlet.

Urban and rural designations are based upon the most recent information from Census 2000. Because editions of this report prior to 2003 used 1990 census criteria, some changes have occurred in the rural/urban designations. In general, there are now more Alaska places designated as rural, and consequently more permits issued to persons classified as rural residents.

## **Changes in the Distribution of Permits**

Table 2 provides summary information on the initial issuance and changes in permit holdings for the assigned resident types. Between 1975 and the end of 2005, 16,264 permanent permits were issued in Alaska's limited fisheries. Alaska residents received 81.7% of these permits (13,294 permits), and nonresidents received 18.3% (2,970 permits). Almost half of all permits issued (46.3%) were to Alaska rural locals, and 26.0% were issued to Alaska urban locals. The remaining permits issued to Alaskans were divided

	Total Initially	Pct	Transfer		Migration		Cancelled		Total		Total 2005	Pct
Residency	Issued	Issued	Change	Pct	Change	Pct	Change	Pct	Change	Pct	Year-end	Year-end
Alaska Rural Local	7,528	46.3%	-605	-8.0%	-784	-10.4%	-600	-8.0%	-1,989	-26.4%	5,539	38.1%

TABLE 2. Initial Issuance, Total Net Changes, and Year-end 2005 Totals of Permanent Limited Entry Permits by Resident Type

between the Alaska rural and urban nonlocal resident types.

The number of permits held by each resident type can change for three reasons: permits can be transferred to other resident types; permit holders can simply move from one locale to another (migration); or permits may be cancelled.

By the end of 2005, the total number of permits had decreased to 14,536 due to the cancellation of 1,439 Alaskan permits and 289 nonresident permits. Note that at year-end 2005, 66 permits had been foreclosed upon by the Alaska Department of Commerce, Community and Economic Development (DCCED) or the Commercial Fishing and Agriculture Bank (CFAB) and had yet to be transferred.

Cancellation normally occurs on nontransferable permits when a permit holder dies or does not renew the permit. In this report, the number of cancelled permits also includes permits that were administratively removed or reconsidered through CFEC's adjudication process. Most of the cancelled permits were in the hand troll fishery (1,055, or 61.1% of the total; see Tables 3 and 4), where a large number of nontransferable entry permits were issued.

When the effects of cancellation, transfer, and migration were combined at the end of 2005, Alaska residents held 11,171 permits (76.9%, including the 66 permits held by DCCED or CFAB) and nonresidents held 3,365 permits (23.1%).

Decreases in the number of permits held by Alaska residents are countered by increases in the number of permits held by nonresidents. Migration, or the change in residence of permit holders, has changed the resident / nonresident balance to a greater degree than permit transfers. By the end of 2005, the net result of permit transfer activity had decreased the number of permits held by nonresidents by 99 permits, whereas permit holders moving into and out of Alaska resulted in a net increase of 783 nonresident permits.

Tables 3 and 4 show permit distribution at initial issuance and at the end of 2005 for the 65 fisheries and 79 permit types where limited entry permits have been issued. Tables 5 and 6 show the net effects of transfer and migration for those same fisheries. Table 7 shows the annual results of transfers, migrations, and cancellations over all fisheries for the 5 resident types.

Some of the more noteworthy changes are:

The overall decline of 1,989 permits held by Alaska rural locals represents 26.4% of all transferable and nontransferable permits originally issued to them. Although migration accounted for the majority of this decrease (784 permits), Alaska rural locals also lost permits through transfer activity (605 permits) and cancellations (600 permits).

Of the Alaska rural local permit decline due to transfer activity, 67.1% is the result of transfers in the Bristol Bay drift (244 permits) and set gillnet (162 permits) fisheries.

Permit holders moving into and out of Alaska brought about a net increase of 783 nonresident permits. The overall net increase takes into account fisheries with both increases and decreases of nonresident-held permits due to migration. Net increases in nonresident permits due to migration occurred in 51 separate permit types, particularly in the hand troll fishery (109 permits) and salmon fisheries in Bristol Bay (171 permits), Cook Inlet (100 permits), and Kodiak (92 permits).

Transfer activity resulted in an overall net decline of 99 nonresident-held permits. Through transfers, nonresidents increased their permit holdings in 18 permit types, and registered net decreases in 38 permit types. Some fisheries in particular show large increases in nonresident-held permits due to transfer, most notably the Bristol Bay salmon fisheries, the Cook Inlet setnet fishery, the Peninsula / Aleutians salmon drift gillnet and seine fisheries, and the hand troll fishery. Other fisheries register large declines of nonresident-held permits due to net transfer activity; for example, the power troll fishery, the Kodiak salmon seine fishery, the Prince William Sound salmon drift gillnet fishery, and the Cook Inlet salmon drift gillnet fishery.

Alaska urban locals show a total net decrease of 752 permits from initial issuance through 2005. Cancellation of permits accounts for 89.2% of this decrease. The majority of the cancelled permits were in the hand troll fishery and were cancelled due to either the death of a nontransferable permit holder or the forfeiture of the permit for nonpayment of permit renewal fees. Since initial issuance, Alaska urban local permit holders show a net gain of 224 permits by transfer, and a net decrease of 305 permits through migration.

Both transfer and migration activities have contributed to a net increase in permits held by Alaska urban nonlocals. Over the 1975-2005 period, there was a cumulative net gain of 423 permits held by this resident group. This gain represents a 49.1% increase in the number of permits originally issued to this resident group. Transfer and migration activity in the Bristol Bay salmon fisheries accounted for 167 of the total net gain in permits. Altogether, Alaska urban nonlocals show net increases due to transfer in 28 permit types, and net increases due to migration in 34 permit types.

Alaska rural nonlocals are the smallest resident group. They recorded an overall net gain of 129 permits, especially through migration in the Arctic / Yukon / Kuskokwim salmon fisheries, and through transfers mainly in the Prince William Sound salmon fisheries, the Peninsula / Aleutians drift gillnet fishery, and the Norton Sound herring gillnet fishery.

### TABLE 3. Total Number of Permits Initially Issued by Permit Type and Resident Type, 1975-2005\*

\* Figures in this table include 1,812 permits which were cancelled because of forfeit, criminal action, revocation, reconsideration, or administrative error. Eightyfour of these permits were subsequently reinstated.

\*\* By 2005, the net effects of transferable and nontransferable permits changing status through the CFEC adjudication process resulted in the addition of 124 transferable permits.

TABLE 7. Summary of Annual Net Changes in Statewide Permit Ownership, 1975-2005

Figure 1 shows the annual mean ages of all persons who transferred permits (transferors), all persons who received permits through transfer (recipients), and the combined total of all persons who hold transferable permits. The statewide mean age of all transferable permit holders decreased from 43 years in 1975 to 41 years in 1977 and remained at about that level through 1985. Since then, the mean age has increased slightly each year and by the end of

2005 it had risen to 48.4 years. The increased mean age of transferable permit holders in recent years may be related to reduced transfer activity as well as an increased mean age of transferors and transfer recipients. The mean age of transfer recipients increased sharply in 2001 but declined in 2004 and 2005. At year-end 2005, the mean age of transfer recipients was 39.3.<sup>4</sup>

*Figure 1.* Mean ages for permit holders of transferable limited entry permits: transferors, transfer recipients, and all permit holders.

When limited entry permits are transferred, CFEC conducts a survey of the transfer participants. The survey collects information on whether the transfer was a gift, sale, or trade, as well as the relationship between the transfer parties. Transfer of a permit as part of an inheritance is considered a gift. For permit sale transfers, it asks for the sale price and the type of financing used. The survey has served as the source of information for CFEC's estimates of permit values, which are used to make fishing loans by the Alaska Department of Commerce, Community and Economic

Development and the Alaska Commercial Fishing and Agriculture Bank. Survey results from the 1980-2005 time period are presented in both this summary and in the main report.

Since 1980, it has been mandatory for the transfer recipient to complete the survey; however, this was not strictly enforced until 1981. There were 139 transfers in 1980 and 15 transfers in 1981 without completed surveys. In other years, there have been only small numbers of transfers with missing surveys, the majority of which are transfers to the two

TABLE 8.
Relationships of Transferors to Transfer Recipients; All Fisheries by Year
(from 1980-2005 survey data)*

Notes: \* Transfer survey information is not included for 271 permit foreclosures. However, 196 subsequent transfers of these permits are included in the "other" category.

\*\* This total includes surveys in which the relationship was not indicated.

lending agencies on foreclosed permits. These missing surveys account for the slight differences between Table 1 and the tables in this section.

### **Relationships of Transfer Participants**

Most permits are transferred between people who know one another. Table 8 shows that of the 25,499 transfer surveys received between 1980 and 2005, 38.6% indicated a transfer between immediate family members or other relatives, and 19.2% indicated a transfer between friends or business partners. Permit exchanges between people who appeared to have no pre-existing relationship accounted for the remaining 42.1% of the transfers.

The percentage of transfers between friends and business partners decreased significantly in 1983. The rewording of the "Friend" category on the survey form to "Personal Friend" may be responsible for some of the decrease. It may also account for the relatively sharp increase in the number of transfers between persons in the "Other" category.

# Relationships of Transfer Participants, by Residency

The relationship between transferors and transfer recipients varies considerably between resident types (Figure 2). Over half (55.0%) of the transfers to Alaska Rural Locals, for all years combined, were from immediate family members or relatives and nearly three-quarters (72.5%) were from family, relatives, friends or partners. In the remaining resident types, the "Other" category predominated.

### Resident Category

*Figure 2. Transfers to the resident type: Relationship between the transferor and the permit recipient.* 

# Permit Acquisition Method: Gift, Sale, Trade, and Other

Under the Limited Entry Act's terms of free transferability, permits may be sold, traded, given away, or inherited. During the 1980-2005 period, 59.9% of all transfers were sales, 34.8% were gifts, and 1.6% were trades. The remaining transfers in the "Other" category comprised 3.7% of the survey responses (Table 9).

The incidence of gift transactions has accounted for roughly 30-40% of all transfers since 1980. Because gifts accounted for only 21.5% of all transfer survey responses in the 1975-1979 period,<sup>5</sup> it has been suggested that

the 1980-2005 percentage may be a result of efforts to enforce the Limited Entry Act's prohibitions against leasing permits. Therefore, some of the "Gift" responses may actually represent lease arrangements, or carry reciprocal expectations.

The highest volume and percentage of sale transfers were from 1985 through 1988.

Individual fisheries often differ considerably from the statewide averages. Tables in the principal report show that while sale transactions predominated for most fisheries, there were 14 permit types where at least half the transfers were gifts (Table 10).

Notes:

\* Transfer survey information is not included for 298 permit foreclosures, however, 214 subsequent transfers of these permits are included in the "other" category.

\*\* This total includes surveys in which the acquisition method was not indicated.

\*\*\* Transfer of permits as an inheritance is included in the gift transfers.

Table 10. Percent of Transfers That Were Gifts, 1980-2005\*

Permit	Percent
Goodnews Bay Herring Gillnet	89.5
Lower Yukon Herring Gillnet	88.9
Nunivak Island Herring Gillnet	81.3
Nelson Island Herring Gillnet	80.3
Cook Inlet Dungeness Pot	75.0
Kuskokwim Salmon Gillnet	72.4
Bristol Bay Herring Spawn on Kelp	70.8
Lower Yukon Salmon Gillnet	64.4
Kotzebue Salmon Gillnet	62.4
Kodiak Salmon Setnet	59.3
Norton Sound Salmon Gillnet	56.9
Pen/Aleutian Salmon Seine	54.6
Upper Yukon Salmon Gillnet	50.5
Southeast Red, Blue King Crab Pot	50.0

In earlier years, fisheries with lower permit values tended to have higher proportions of gift transactions. This generality no longer appears to be true and could be due to the overall fall of permit prices. Some notable exceptions were the Peninsula / Aleutian salmon seine fishery (high percentage of gifts and high permit value), and the salmon hand troll fishery (low percentage of gifts and a low permit value) (Tables 18 and 20, principal report).

## **Acquisition Methods by Residency**

Table 11 shows a breakout of acquisition methods by the resident type of the transfer recipient. Since 1980, 49.4% of the Alaska Rural Locals who have obtained permits through transfer have received them as gifts. Sales have accounted for the majority of the transfers to each of the other resident types.

## **Financing of Permit Purchases**

The transfer survey indicates that the predominant means of financing for permit purchases has been through self-financing, which

Table 11. Permit Acquisition Methods by Residency, 1980-2005

Residency	Gift	Sale	Trade	Other
Alaska Dural Lasal	40 40/	45 10/	1 50/	4.00/
Alaska Rural Local	49.4%	45.1%	1.5%	4.0%
Alaska Rural Nonlocal	28.8%	64.9%	1.6%	4.7%
Alaska Urban Local	27.9%	66.8%	2.0%	3.3%
Alaska Urban Nonlocal	27.9%	66.7%	1.6%	3.7%
Nonresident	28.5%	67.0%	1.3%	3.2%

was used for 63.3% of all purchases surveyed from 1980 through 2005 (Table 12). The next most important source of financing has been the Department of Commerce, Community and Economic Development's loan program with 16.3%.<sup>6</sup> The remainder of the financing sources come from transferors, banks and other private lending institutions, the Commercial Fishing and Agriculture Bank, and fish processors.

The percentage of self-financed purchases has tended to increase over time; there was a significant increase in 2001 through 2005, perhaps related to decreasing permit values. This contrasts with the percentage of purchases financed by the Alaska Department of Commerce, Community and Economic Development, which have declined somewhat since the mid-1980s.

Both the percentage and the number of permit sales financed by the transferor have declined significantly since 1980 (Table 12). In 1980, 142 transfers were financed by the seller (27.7%); however, in the 10 years since 1995 only 15 transfers have been seller-financed.

Fishery-specific tables in the main report indicate that many individual fisheries deviate from the statewide percentages. For example, fisheries in which the percentages of selffinanced permits are higher than the statewide

TABLE 12. Sources of Permit Financing, All Fisheries by Year (from 1980-2005 survey data)\*

\* This table only includes the transfers where the survey respondents indicated the permit changed hands through a sales transaction.

percentage tend to be those with lower permit values, especially the Northern and Southern Southeast herring spawn on kelp pound fisheries (90.6 and 95.7%, respectively), the hand troll fishery (88.7%), the Bristol Bay herring spawn on kelp (91.7%), the Southeast dive fisheries (80.0 to 89.7%), and the 6 Arctic / Yukon / Kuskokwim salmon fisheries, which ranged between 85.7% and 69.9%.

State-financed loans were the principal means of financing in the Southeast king and Tanner crab pot (40.0% to 100.0%) and Chignik salmon seine fisheries (33.8%). Other fisheries that show high use of state financing include: Cook Inlet salmon seine, Southeast roe herring seine, Prince William Sound roe herring seine, Southeast Dungeness pots, and the Southern Southeast sablefish longline fishery.

### Permit Financing by Resident Type

Table 13 provides information from survey responses on the sources of permit financing by resident type over the entire 1980 to 2005 time period. Alaska residents have been the recipients of 10,476 permit purchases since 1980 and most commonly used either their personal resources or authorized loans from the State of Alaska as a means of financing. Urban Alaska residents have received about half (1,312 of 2,490) of the state loans. Nonresidents have the highest rates of selffinancing (75.3%) and of financing through the transferor (10.5%).

\* This table only includes the transfers where the survey respondents indicated the permit changed hands through a sales transaction.

### **Foreclosures on Permit Loans**

Figure 3 shows the number of permit loans foreclosed upon by DCCED or CFAB over the 1982 to 2005 time period. By law, these are the only lending entities that can accept an entry permit as collateral on a loan. The

number of foreclosures remained fairly constant in the 1980s, and then dropped lower following 1988. The number of permits transferred to DCCED or CFAB began increasing in 1999 and spiked dramatically in 2002 with 45 foreclosures. The number of foreclosures declined in 2003 through 2005.

Figure 3. Foreclosure of permit loans by year.

## **Permit Prices**

Table 14 shows mean and median permit prices by permit type and year for sales that occurred over the 1980 to 2005 period. If the surveys indicated a permit price of less than \$500, they were excluded from the calculations.<sup>7</sup> To preserve confidentiality, permit value statistics are not shown if there were less than 4 sales transactions for a permit type in a year. Also, no value is reported for a permit type if there were no sales transactions in a year. All the prices are in nominal dollars and do not reflect adjustments for general price inflation.

The most complete information over the longest period of time is for permit prices in the salmon fisheries. Prices in these fisheries tended to increase until around 1990, and then fall from 1991 to 2003 with modest increases in 2004 and 2005. Most of the permits in the herring fisheries show their highest values from 1989 to 1991.

Table 14. Mean and Median Permit Prices From Survey Data, By Permit Type and Year, 1980 - 2005 \*

Notes:

\* In this table, calculations of permit values exclude all permit sales of less than \$500. Other CFEC reports may use different criteria for excluding certain permit sales, with permit values that may vary somewhat from this table.

\*\* When there are less than four transactions in a year, permit values are masked due to confidentiality regulations.

### **Endnotes:**

1. (page 3) Although 14,033 transferable permits were initially issued (Table 3), the number of transferable permits remaining at the end of 2005 was 13,653 (Tables 1 and 4). The net loss of 380 transferable permits is due to the cancellation of 504 transferable permits and the addition of 124 permits that were converted from nontransferable to transferable status through the CFEC adjudication process.

2. (page 3) Because some permits may be transferred more than once during a year, the ratio of permits transferred to available transferable permits would be slightly less.

3. (page 5) The Alaska Urban Local category is not applicable for several fisheries which have no local urban communities. These fisheries are: Yakutat salmon setnet; Chignik salmon seine; Bristol Bay salmon drift and setnet; Bristol Bay herring spawn on kelp; Lower Yukon salmon and herring gillnet; Prince William Sound salmon seine, drift and setnet; Prince William Sound herring seine, gillnet and spawn on kelp pound; Prince William Sound sablefish; and the Nelson Island, Nunivak Island, and Goodnews Bay herring gillnet fisheries.

4. (page 17) Because a person may hold more than one permit, the annual mean age may include the age of a person more than one time in its calculation. A person's age is included in the calculation for each permit held.

5. (page 20) See CFEC Changes in the Distribution of Permit Ownership in Alaska's Limited Fisheries, 1975-1981; February, 1983.

6. (page 21) The percentage of state-financed permits increases to 23.6% when only the purchases by Alaska residents are considered (Table 13).

7. (page 24) Permit price estimates produced for this report may differ from the CFEC monthly permit value report due to more stringent criteria for exclusion used in the monthly report.
