

CHANGES IN THE DISTRIBUTION OF ALASKA'S  
COMMERCIAL FISHERIES ENTRY PERMITS,  
1975-2010

CFEC Report Number 11-3N

---

Alaska Commercial Fisheries Entry Commission  
8800 Glacier Highway Suite 109  
P.O. Box 110302  
Juneau, Alaska 99811-0302  
(907) 789-6160

## **ABSTRACT**

This report provides detailed information on changes in the distribution of permanent entry permits in Alaska's limited fisheries. From 1975 through 2010, 79 permit types have been issued in 65 fisheries. The report provides both statewide and fishery-specific data on the number of permit transfers, the geographic distribution of permit holders, changes due to permit transfers, changes due to the relocation of permit holders and the year-end 2010 geographic distribution of permit holders.

The report also includes extensive information on the age of permit holders, age differences between transferors and transfer recipients, the incidence of intra-family and business partner transfers, transfer acquisition methods, and financing of permit purchases. The information contained in the report is derived from the Commercial Fisheries Entry Commission's permit and transfer survey files.

The report is published as two separate documents: an executive summary and the principal report, which is primarily a reference document.

## **I. INTRODUCTION**

## I. INTRODUCTION

In 1973, the Alaska State Legislature enacted Alaska's Limited Entry Act (AS 16.43) for commercial fisheries. The act established a new agency, the Commercial Fisheries Entry Commission (CFEC), to administer a program regulating entry into commercial fisheries under state jurisdiction. Limited entry was implemented in most of the salmon fisheries in 1974. By the end of 2010 permanent limited entry permits had been issued in 65 commercial fisheries:<sup>1</sup> 26 salmon fisheries, 19 herring fisheries, 9 crab fisheries, 5 sablefish fisheries, 3 shrimp fisheries and 3 dive fisheries (sea urchin, sea cucumber, and geoduck). In some limited fisheries, more than one type of permit was issued to help contain increases in fishing power. Some permits constrain the amount of gear that can be used while others constrain the length of the vessel. In some limited fisheries, non-severable permits were issued that combine permissible gear types while other permits combine harvestable species. To date, a total of 79 permit types have been issued in the 65 limited fisheries.

A legal prerequisite of the Limited Entry Act was that permits could not be locked in the hands of those who were originally issued them (i.e., "initial issuees").<sup>2</sup> After much study and debate, the legislature chose free transferability as the method for allowing permit holders to enter and exit from the fisheries.

Free transferability allows the transfer of permits from parents to their children, and allows family members to inherit a permit upon the death of a permit holder. It allows persons to enter and exit fisheries at times opportune to them, and eliminates the need for an expensive and time-consuming bureaucratic process to handle permit reallocation. Free transferability facilitates permit exchange and promotes overall efficiency. Many other transfer options were considered but were found lacking with respect to these criteria.

In 1983, the Alaska Supreme Court ruled on the *State of Alaska v. Ostrosky*,<sup>3</sup> which challenged the constitutionality of the Limited Entry Act, particularly the free transferability provisions. The court upheld the constitutionality of both the Act and of free transferability and also affirmed the

---

<sup>1</sup> By the end of 2010, maximum number regulations have been adopted for 66 fisheries. No permanent entry permits have been issued in the Prince William Sound sablefish pot gear fishery, and therefore the fishery does not appear in this report. In addition, 2 fisheries are under a vessel limited entry program, and are also not reported herein.

<sup>2</sup> Note that initial issuance refers to the issuance of a new permit whenever it occurred. Because some applicants are difficult to classify under a hardship ranking system, a final determination of their standing may come only after an extensive hearing and adjudicatory process. In other instances, permits have been issued as lawsuits brought against the commission are resolved. Thus, some permits have been issued several years after the main body of permits were issued for a given permit type.

<sup>3</sup> *State of Alaska v. Ostrosky*, 667 P.2d 1184 (1983).

legislative objectives in adopting the transferability option. The decision was subsequently allowed to stand by the United States Supreme Court when it dismissed the *Ostrosky v. State*.<sup>4</sup>

Despite the benefits of free transferability, many persons remain concerned that permit transfers might result in undesirable consequences with regard to the distribution of permits. There is a concern that permits will leave the state, or that permits will disappear from isolated fishing communities which are local to a limited fishery, thereby eroding the economic base. The legislature has twice ordered studies of transferability options, first upon initial passage of the Act,<sup>5</sup> and again in 1980.<sup>6</sup>

Because of concerns about free transferability, CFEC has produced this report so that the legislature, the administration, and other interested parties will be kept accurately apprised of the facts.

This edition covers the 65 limited fisheries for which permanent permits have been issued in the period 1975 through 2010. It contains detailed information on transfer incidence, the initial geographic distribution of permit holders, changes in the distribution of permits due to permanent transfers of permits and migration of permit holders, and the year-end 2010 geographic distribution of permit holders. Extensive information is also provided on the age distribution of permit holders, age differences between transferors and transfer recipients, rates and characteristics of intra-family and business partner transfers, permit market values, and permit acquisition and financing methods.

## **II. TRANSFER INCIDENCE**

## II. TRANSFER INCIDENCE

### Statewide Turnover Rates

During the period 1975-2010, 16,532 permanent limited entry permits were issued in 65 limited entry fisheries. However, not all of these permits were available for transfer. AS 16.43.250 requires that CFEC develop hardship ranking systems (“point systems”) to allocate permits, and to determine point levels at which a person would experience only minor economic hardship if excluded from an initial permit allocation. Permanent permits issued to persons classified at minor economic hardship levels are nontransferable.

A total of 14,175 transferable permits and 2,357 nontransferable permits have been issued. By the end of 2010 14,415 permits remain, 13,595 transferable and 820 nontransferable. The net reduction of 580 transferable permits is due to the cancellation of 708 transferable permits and the net addition of 128 permits that were converted from nontransferable to transferable status through the CFEC adjudication process. The net reduction of 1,537 nontransferable permits is due to the cancellation of 1,409 nontransferable permits and the net conversion of 128 nontransferable permits to transferable status through the CFEC adjudication process.

During this same time span there were 36,305 permanent permit transfers. Original permit holders transferred 11,729 permits, indicating approximately 82.7% of all transferable permits had changed hands at least once by the end of 2010.

Two types of annual transfer rates are shown in Table 2-1. The first type is the ratio of the permits transferred for the first time (i.e., from initial issues) to the number of transferable permits. This ratio would be expected to decline over time if no new permits were issued because each year there would be fewer permits still held by initial issues. This transfer ratio has declined from 0.08 to 0.01 over the 1975-2010 time period. Over the same period, the average annual ratio of transfers from initial issues to the sum of annual transferable permit counts is 0.03.

The second type of annual transfer rate reported in Table 2-1 is the ratio of transfers to available transferable permits, which provides a measure of the annual turnover rate for transferable permits. This ratio varied between 0.06 and 0.13 from 1975 through 2010, and averaged 0.08 for all years combined. As can be seen in Table 2-1, the ratio dropped below the all-years average in 1989 and has remained relatively low through 2010.

### **Turnover Ratios by Permit Type, 1975-2010**

In Table 2-2, permit types were divided into groups based upon the year(s) in which they were limited. A summary of transfer rates is provided for each group. The first group consists of the original 19 salmon permit types for which permanent permits were first issued in 1975. The second group consists of the 6 Arctic-Yukon-Kuskokwim (AYK) salmon permit types for which permanent permits were first issued in 1976. The remaining limited herring, roe herring, shellfish, dive and sablefish permit types are also grouped by years of limitation. These permit type groupings appear in tables throughout the report.

The sum of annual permit counts represent a summation of the number of transferable permits existing at the end of each year. These rates are comparable to the all-years statewide summary rates presented in Table 2-1.

Two measures of average annual transfer rates for individual permit types are shown in Table 2-2. The first transfer rate is calculated by dividing the cumulative total transfers from initial issues, 1975 to 2010, by the sum of annual transferable permit counts over the same period. The permit types limited in the most recent years have the highest rates of transfers from initial issues, but this rate is expected to decline over time because each year there will be fewer initial issues remaining in the permit type.

The second transfer rate is calculated by dividing all permanent transfers over the time period by the sum of annual transferable permit counts over the same period. For the second type of turnover rate (ratio of transfers to the sum of annual transferable permit counts), the transfer rates vary considerably by permit type. The transfer rates for about one-half of the permit types are 0.09 or greater when averaged across all years. Some of the permit types with lower annual average rates are all of the AYK salmon permit types, most of the Westward herring permit types, the Chignik Salmon Purse Seine Permit, the Goodnews Bay Herring Gillnet permit, the Cook Inlet Dungeness Pot permit, and the Kodiak Tanner Bairdi pot gear permit for vessels up to 120 feet.

The annual transfer rate within a permit type may vary considerably from year to year. This is demonstrated in Appendix B where the number of transferable permits, the number of transfers, and the transfer rates for each year are presented for individual permit types.

**Table 2-1. Statewide Transfer Data on Permanent Permits by Year**

<i>Total</i>	78		430,289	11,729	0.03	36,305	0.08

2,311 permits have been cancelled. Except for the 195 reinstated cancelled permits, cancelled permits are excluded from the year of cancellation forward.

708 transferable permits have been cancelled, and 128 transferable permits have been added through conversion from nontransferable to transferable status through the CFEC adjudication process.

The number of transfers includes 342 loan foreclosures by the Department of Commerce, Community and Economic Development or by the Commercial Fishing and Agriculture Bank, and 334 subsequent transfers from these entities.

\* The sum of annual permit counts is the total number of permits at the end of each year, summed over the entire period.

\*\* The number of transfers includes permit foreclosures and subsequent transfers of these permits.

This page intentionally left blank.

### **III. GEOGRAPHIC DISTRIBUTION OF PERMITS, TRANSFERS AND MIGRATIONS**

### **III. GEOGRAPHIC DISTRIBUTION OF PERMITS, TRANSFERS AND MIGRATIONS**

The effects of permit transfers and migration of permit holders are examined in this portion of the report. Statewide and fishery-specific information are provided.

#### **Classification of Permits**

Hardship ranking systems, or “point systems”, based upon past participation and economic dependence were developed for each limited entry fishery and used to allocate the original permits. The Limited Entry Act requires CFEC to determine levels within the point systems where persons would experience only “minor economic hardship” if excluded from an initial permit allocation. Persons who receive permanent entry permits and who are ranked at or below the minor economic hardship level receive nontransferable permits, while persons who are ranked above the minor economic hardship level receive transferable permits.

Over all permit types, 16,532 permits have been issued through year-end 2010. 14,175 transferable permits have been issued to persons ranked above the minor economic hardship level (85.7%) and 2,357 nontransferable permits have been issued to persons ranked at or below the minor economic hardship level (14.3%).

In most permit types, a majority of the permanent permits were issued as transferable permits to persons ranked above the minor economic hardship level. In a few fisheries, a higher percentage of nontransferable permits were issued. For example, 312 permanent permits were initially issued in the Southeast shrimp pot fishery in 1998; 155 transferable permits (49.7%) were issued to persons ranked above the minor economic hardship level and 157 nontransferable permits (50.3%) were issued to persons ranked at or below the minor economic hardship level (Table 3-1). Table 3-1 indicates the distribution of permits among resident types for transferable permits and all permits, both transferable and nontransferable, at initial issuance. Table 3-2 indicates the distribution of permits among resident types for transferable permits and all permits, at year-end 2010. Year-end holdings in the Southeast Salmon Seine permit type reflect a net decrease of 40 permits since initial issuance, of which 35 were forfeited under the Southeast Revitalization Association fleet consolidation program in 2008.

## Classification of Permit Holders

In order to measure the changes in the distribution of permits, permit holders have been classified into broad categories according to where they reside. Langdon<sup>1</sup> divided permit holders who were residents of Alaska into those who had domiciles that were “local” and those that were “nonlocal” to the permit type. He further defined Alaskan domiciles as “rural” or “urban.” Non-Alaskans were grouped as a single “nonresident” category. Langdon’s conceptual categories are a useful way to examine the geographic distribution of permits. Combinations of Langdon’s resident types are used in this report. The resident types are:

**ARL:** *Alaska* resident of a *Rural* community which is *Local* to the fishery for which the permit applies;

**ARN:** *Alaska* resident of a *Rural* community which is *Nonlocal* to the fishery for which the permit applies;

**AUL:** *Alaska* resident of an *Urban* community which is *Local* to the fishery for which the permit applies;<sup>2</sup>

**AUN:** *Alaska* resident of an *Urban* community which is *Nonlocal* to the fishery for which the permit applies;

**NR:** *Nonresident* of Alaska;

**DCCED/CFAB:** Signifies permits that have been foreclosed upon by the Department of Commerce, Community and Economic Development (DCCED) or by the Commercial Fishing and Agriculture Bank (CFAB) and have yet to be transferred.

In some cases, ARLs and ARNs will be combined into a “rural” category; AULs and AUNs into an “urban” category; ARLs and AULs into a “local” category; ARNs and AUNs into a “nonlocal” category; and ARLs, ARNs, AULs, and AUNs into an “Alaskan” category.

Decision rules for designating urban/rural and local/nonlocal classifications are described in Appendix A. For Census 2000, the Census Bureau changed its method of classifying areas as rural or urban. The Census Bureau used advances in geographic information systems (GIS) to automate the urban and rural delineation process. The Census Bureau did not automatically recognize previously existing classifications of rural or urban. There was no "grandfathering" of areas that qualified based on the results of earlier censuses. For details on this process, please see Appendix A.

Urban and rural designations in this report are based upon the most recent information from Census 2000. Because editions of this report prior to 2003 used 1990 census criteria, some

<sup>1</sup> Langdon, S. "Transfer Patterns in Alaskan Limited Fisheries" January 17, 1980.

<sup>2</sup> The Alaska Urban Local category is not applicable for several administrative areas which have no local communities classified as urban. These include the salmon administration areas of Yakutat, Chignik, Bristol Bay, and the Lower Yukon and the herring administrative areas of Bristol Bay, the Lower Yukon, Nelson Island, Nunivak Island and Goodnews Bay.

changes have occurred in the rural/urban designations. In general, there are now more Alaska places designated as rural, and consequently more permits issued and held by rural residents.

The local/nonlocal distinction is linked to Commercial Fisheries Entry Commission administrative areas, which are based on regulatory boundaries of the fishery. Some inland communities are considered local to permit types in areas such as the Yukon River and Bristol Bay. A thorough description of local/nonlocal decision rules also can be found in Appendix A.

Before 1978, resident type classifications were based on address information provided to CFEC during the issuance, renewal and transfer of permits. Some nonresident applicants used an Alaska address, so were classified as residents. After 1978, in an effort to improve the accuracy of resident/nonresident data, CFEC renewal and transfer forms included a sworn declaration of residency. In addition, permit holders claiming Alaskan residency were required to provide a valid Alaska address. Before 1982, permit renewal forms included space for only one address. The address listed may have been a temporary mailing address near the fishing grounds. As a result, a number of fishermen could have been misclassified as living in a place that was local to the permit type. Beginning in 1982, permit renewal forms included space for both a permanent and a temporary mailing address. Data suggest the number of fishermen who may have been misclassified is relatively small, although an exact number is unknown. From 1982 forward, temporary mailing addresses have not been a major cause of erroneous resident classifications.<sup>3</sup>

For this report, residency of the permit holder was determined by the type of fee paid for the issuance or renewal of the permit, either resident or nonresident. In the event that someone other than the year-end permit holder paid the fee, the residency declaration of the year-end permit holder was used to determine residency.

### **Geographic Distribution of Initial Issues**

Alaska residents received 81.6% (13,487 permits) of the initial allocation of permits and nonresidents received 18.4% (3,045 permits) over all permit types through 2010. Of the 16,532 permits issued, ARLs received more permits than any other resident type (7,603 permits, 46.0%). AULs received 4,306 permits (26.0%), and nonlocal permit holders (ARN and AUN) received 1,578 permits (9.5%).

---

<sup>3</sup> The first edition of this report (1983) estimated the number of transfers involving permit holders who used an “in care of” address at 2%. Since then there have been major permit file data corrections which included replacing temporary mailing addresses with permanent addresses.

The percentages of permits issued to the resident types vary widely between individual permit types and groups of permit types. For example, ARLs were issued 41.7% (3,453) of the 8,290 permits in the group of original 19 salmon permit types, and 80.1% (1,774) of the 2,215 Arctic-Yukon-Kuskokwim (AYK) permits.

### **Geographic Distribution of Permit Holders at Year-end 2010**

By the end of 2010, the distribution of permits among the resident types had changed to the levels shown in Table 3-2. Alaska residents held 76.8% (11,068 permits) of all permits and nonresidents held 23.2% (3,347 permits). Eight permits had been foreclosed upon by DCCED or CFAB and have yet to be transferred, but are included in the totals listed for Alaska residents.

Changes in the distribution of all permits from the time of initial issue to year-end 2010 include a 29.0% (2,203 permits) decrease in the total number of permits held by ARLs. At year-end 2010, ARLs held 48.8% of all Alaskan resident permits (5,400 out of 11,068) and 37.5% of the total permits (5,400 out of 14,415). Generally, ARLs have experienced the largest percentage decreases of transferable permits in the permit types that have been limited the longest.

The total number of permits held by AULs decreased 18.4% (792 permits) by the end of 2010. The total number of permits held by AUNs increased 41.5% (367 permits), the largest percent change of any residency type. ARNs and nonresidents also increased their holdings of permits: 29.0% for ARNs (201 permits) and 9.9% (302 permits) for nonresidents.

### **Geographic Changes in the Distribution of Permits Due to Transfer**

To examine the geographical changes in permit distribution attributable to transfer activity, transfers have been divided into two groups: 1) transfers between permit holders of the same resident type and 2) transfers between persons of different resident types. Transfers within the same resident type are termed “intra-cohort”, while transfers between different resident types are termed “cross-cohort”. Cross-cohort transfers result in a change in the distribution of permits among the resident types.

A total of 36,305 transfers are organized by cross-cohort and intra-cohort categories in Table 3-3, and the actual numbers of transfers from one resident type to another are presented by year. The majority of all transfers in each year have been between persons of the same resident type. The annual percentage of intra-cohort transfers was at a high of 69.2% in 1976 and a low of 56.5% in 2004. Generally, the percentage of intra-cohort transfers was higher in the early years, from 1975

to 1983. By the end of 2010, intra-cohort transfers over all years accounted for 58.7% of the total number of transfers.

Table 3-4 contains information on the intra-cohort and cross-cohort transfers for each permit type, all years combined. With a few exceptions, the majority of transfers within each permit type have been intra-cohort.

The cumulative net results of cross-cohort transfers to each resident type, by permit type, are shown in Table 3-5. By year-end 2010, the following changes had occurred in the distribution of transferable permits as a result of cross-cohort transfer activity:

1. Permits held by ARLs decreased in 27 of the listed permit types as the net result of cross-cohort transfer activity, which resulted in a statewide net decrease of 558 ARL permits (8.2% of the 6,806 transferable permits originally issued to ARLs). The Bristol Bay salmon drift and set gillnet permit types have had the largest numerical net decreases due to transfer activity (416 permits combined). This 416 permit decrease is 32.8% of the 1,270 transferable permits originally issued to ARLs in these two permit types.
2. Permits held by ARNs increased by 289 permits due to net transfer activity, a 45.2% increase of the 639 transferable permits issued to this resident type. The largest net increase was in the Prince William Sound salmon drift gillnet permit type (101 permits).
3. Permits held by AULs increased by 300 permits due to net transfer activity (9.5% of the 3,168 transferable permits originally issued to this group). The largest net increases were in the Salmon Power Troll (64 permits), Kodiak Salmon Seine (62 permits), SE Salmon Seine (52 permits), and Kodiak Salmon Setnet (50), and Southeast permit types. The number of permits held by AULs decreased in 12 permit types while increasing in 40 others.
4. Permits held by AUNs have increased by 161 permits due to net transfer activity, a 20.1% increase over the 802 transferable permits initially issued to this resident type. The number of transferable permits held by AUNs has increased in 29 permit types, especially Bristol Bay salmon (146 permits). 29 different AUL permit types decreased, and 29 permit types increased in AUN counts.
5. The number of permits held by nonresidents decreased by 200 permits statewide through net transfer activity, a 7.2% decrease from the 2,760 transferable permits originally issued to nonresidents. The number of transferable permits decreased in 40 of the permit types due to net transfer activity, especially the salmon power troll (139 permits), Kodiak salmon seine (81 permits), Cook Inlet salmon drift gillnet (66 permits), and Prince William Sound salmon drift gillnet (61 permits) permit types.

In 25 other permit types, the number of permits held by nonresidents increased due to net transfer activity, especially Bristol Bay Salmon Drift and Set Gillnet (242 permits), Salmon Hand Troll (42 permits), and Cook Inlet Salmon Setnet (26 permits).

### **Geographic Changes in the Distribution of Permits Due to Migration**

Other changes in residency patterns of permit distribution occur when permit holders move from one community to another. During the 1975-2010 time period there were 11,235 city and/or

residence indicator changes that resulted in a resident type reclassification and have been defined as “migrations” for the purposes of this report.

Migrations to and from each resident type for both transferable and nontransferable permits are shown in Table 3-6. In general, there appears to be considerable movement both to and from each resident type. The net results of migratory activity to each resident type over the entire period are shown by permit type in Table 3-7.

The 1975-2010 geographical shifts in the distribution of permits due to migration can be summarized as follows:

1. Statewide, the number of permits held by ARLs decreased by 925 permits as the net result of migration. Migratory activities did not affect all permit types in the same manner, however. There were ARL net decreases in 43 permit types and ARL net increases in 9 others.  
  
The number of permits held by ARLs decreased most dramatically in the Bristol Bay Salmon Setnet (126 permits), Lower Yukon Salmon Gillnet (111 permits), and the Salmon Hand Troll (78 permits) permit types. Some of the ARL gains through migration were made in the SE Salmon Drift Gillnet (22 permits), Cook Inlet Salmon Setnet (11 permits) and Cook Inlet Salmon Drift (8 permits).
2. The number of permits held by ARNs decreased by 2 as a net result of migration activity. Permit types with the greatest amount of increase due to migration were the Lower Yukon Salmon Gillnet (36 permits) and both the Kuskokwim and Norton Sound Salmon Gillnet (9 permits each). The most notable decreases were in the Prince William Sound Salmon Drift Gillnet (28 permits) and the Bristol Bay Salmon Drift (26 permits) permit types.
3. The number of permits held by AULs decreased by 322 as the net result of migration. The decrease was largest in both the Kodiak Salmon Seine and Salmon Hand Troll (67 permits each), followed by the Cook Inlet Salmon Setnet (53 permits), and Cook Inlet Salmon Drift (52 permits) permit types.
4. The number of permits held by AUNs increased by 353 as the net result of migration. Permits held by AUNs increased by 62 permits in the Lower Yukon Salmon Gillnet permit type, 48 permits in the Bristol Bay Salmon Setnet permit type and 44 permits in the Kuskokwim Salmon Gillnet. However, there were net decreases in 14 permit types, the most notable of which was in the Bristol Bay Salmon Drift (23 permits) followed by the Cook Inlet Herring Seine (17 permits) permit types.
5. Permit holders moving in and out of Alaska resulted in a net increase of 896 nonresident permits. The nonresident category shows net changes in the number of permits in 60 different permit types, 54 of which indicate net increases. The largest net increases in permits held by nonresidents was with Salmon Hand Troll (115 permits), followed by Bristol Bay Salmon Drift (114 permits), and Bristol Bay Salmon Setnet (83 permits). The largest decreases in the number of permits held by nonresidents as the net result of migration occurred in the Southeast Salmon Drift Gillnet and Sea Urchin Dive (3 permits each) permit types.

### **Summary of Changes in Permits Held by Resident Type**

A yearly summary of the net changes in the distribution of permits by resident type as a result of transfers, migrations and cancellations is provided in Table 3-8. The cumulative effects of these changes are summarized below:

1. ARLs were issued 7,603 permits, (transferable and nontransferable, Table 3-1) through year-end 2010, which represented 46.0% of all permits. At year-end 2010, 5,400 (37.5%) of all permits were held by ARLs (Table 3-2). The decrease of 2,203 permits represents 29.0% of all permits originally issued to this group. Migration accounts for 42.0% of the decrease (925 permits) followed by cancellations (32.7% or 721 permits), and transfer activities (25.3% or 558 permits).

The number of permits held by ARLs continued to decline in 2010, decreasing by 35 at the year's end. Before 1987, transfers accounted for most of this decline, but in more recent years, migrations and cancellations have accounted for most of the decrease.

2. ARNs were initially issued 693 permits (4.2% of all permits). By the end of 2010, the number of permits held by ARNs rose to 894 (6.2% of all permits). The increase of 201 permits represents a 29.0% increase over the number of permits originally issued to this group. The net increase is due to transfer activity (289 permits). Cancellations and migrations reduced the number of ARN-held permits by 86 and 3 permits, respectively.
3. AULs received 4,306 of all initial permits issued through 2010 (26.0% of all permits). They held 3,514 permits at year-end 2010 (24.4% of all permits), a decrease of 792 permits. Cancellations of permits (770 permits) have been the major factor in this decrease. Most of these cancellations were in the hand troll permit type. Nontransferable permits are normally cancelled when the permit holders dies or does not renew the permit.

Since 1975, transfer activities have resulted in a net increase of 300 permits held by AULs, while migration has resulted in a net loss of 322 permits to other resident types.

4. AUNs received 885 (5.4%) of all initial permits issued through 2010. By the end of 2010, the number of permits held by AUNs stood at 1,252 (8.7% of all permits). The increase of 367 permits represents a 41.5% increase over the number of permits originally issued to this group.
5. Nonresidents received 3,045 of all initially issued permits through 2010 (18.4% of all permits). At the end of 2010, nonresidents held 3,347 permits (23.2%). The net increase of 302 permits represents a 9.9% increase over the number of permits originally issued to this group.

The overall net change in nonresident permit ownership has been influenced primarily by migration (increase of 896 permits) and cancellations (drop by 393 permits). Net transfer activity has reduced nonresident permit holders by 200 permits. Annually, the net changes in migration and transfers have fluctuated greatly.

Appendix C documents initial issuance, transfer, migration, and cancellations of permits by permit type and by year for each of the resident types. An in-depth analysis of the movements of permits from ARL permit holders and from the Alaska Local permit holders (combined group of ARLs and AULs) are presented in subsequent chapters of this report.

## **IV. AGE PATTERNS AMONG PERMIT HOLDERS**

## **IV. AGE PATTERNS AMONG PERMIT HOLDERS**

A concern of the drafters of the Limited Entry Act was that limited permits would remain accessible to younger Alaskans. This section examines ages of permit holders, transferors, and transferees (transfer recipients) over the lifetime of the limited entry program. Excluded from the data are nontransferable permits and permits which were foreclosed upon by the Department of Commerce, Community and Economic Development (DCCED) or the Commercial Fishing and Agriculture Bank (CFAB).

### **Mean Age of Permit Holders, Transferees (Transfer Recipients), and Transferors**

Annual mean ages for all transferable permit holders, transferors and transfer recipients are shown in Table 4-1. If no permits were transferred at all, the mean age of permit holders would logically increase by one year each year. However, the mean age actually declined from 42.7 in 1975 to 41.0 in 1978 and remained relatively stable through 1985. In 1986, the mean age of transferable permit holders increased to 41.5 and steadily rose to 49.3 at year-end 2010. There are at least two possible explanations for this increase: 1) fewer transfers have occurred in recent years resulting in a reduction of younger people entering the fisheries, and 2) the average age of transfer recipients has generally increased from a low of 32.5 in 1976 to a high of 41.1 for both 2002 and 2003, it has since declined only minimally.

From 1975 through 1984, the statewide annual mean age of transfer recipients was consistently between 32 and 35 years. Beginning in 1985 and continuing through 1990, the annual mean age of transfer recipients rose to between 35 and 36 years. The age of transfer recipients generally increased between 1991 and 2003, reaching a mean age high of 41.1 in 2002 and 2003. Since then, the mean age of transfer recipients has been around 40.

The statewide annual mean age of transferors was highest in 1975 at 51.9 years, shortly after the first limited entry permits were issued. It decreased to 41.3 years by 1979, and then rose to stay in the range of roughly 43 to 44 years for the 1980's. Between 1990 and 2005, the annual transferor mean age gradually increased to just above 50 years in 2008, to where it is by the end of 2010.

Overall, the age difference between transferors and transfer recipients was greatest in the early years of the limited entry program, particularly prior to 1978. Each year between 1983 and 1999 the age difference has been below 10 years, dipping as low as 7.3 years, and since then it has rested around 10 years with the exception of 2001 and 2002.

### **Mean Age by Permit Type**

Annual mean ages for year-end transferable permit holders, transferors, and transfer recipients in specific permit types are presented in Table 4-2. At year-end 2010, the five permit types with the highest mean reported ages of year-end permit holders were the Kodiak Roe Herring Seine/Gillnet (62.0 years), Upper Yukon Salmon Gillnet (61.2 years), Kodiak Food/Bait Herring Trawl 60 feet (60.0 years), Norton Sound Herring Beach Seine (59.7 years) and the Cook Inlet Dungeness Pot (59.7 years).

### **Mean Age by Resident Type**

The annual mean ages by resident type for year-end transferable permit holders, transferors, and transfer recipients are presented in Table 4-3. The highest mean age for year-end transferable permit holders in 2010 was Alaska Urban Locals (50.4 years) and the lowest was Alaska Rural Nonlocals (47.4 years).

By year-end 2010, the mean age of transferors varied by 6.6 years between resident types. The reported mean age of transferors by resident type ranged from 52.1 (Alaska Rural Local) to 45.4 (Alaska Rural Nonlocal) for the 5 resident type categories.

Among all transfer recipients, the mean age gradually increased over the 1975 to 2003 time period. In 2010, the mean age of transfer recipients varied only between 36.8 (Alaska Rural Nonlocal) to 41.8 (Alaska Urban Local) among the five resident type categories.

The annual age class distributions of year-end transferable permit holders are shown in more detail in Table 4-4. The table also lists the annual percentage each age class represents of all transferable permits held by a particular resident type (percentage of the row total). In recent years, the percentage of permit holders for the older age classes has generally increased. Mean ages for specific permit types by resident type and year are provided in Table 4-5.

**Table 4-1. Mean Ages of Transferable Permit Holders, Transferors, Transferees, and Mean Age Differences Between Transferors and Transferees by Year**

Year	Transferable Permits*	Mean Age	Number of Transfers*	Transferor Mean Age	Transferee Mean Age	Mean Age Difference

2009	13,566	49.2	957	48.7	39.3	-9.4
2010	13,587	49.3	1,157	50.6	40.1	-10.4

\* The number of transferable permits excludes 342 foreclosed permits, 8 of which are still held by DCCED and CFAB.

\*\* The number of transfers excludes permits with missing birthdates.

\*\*\* Mean ages may be based on fewer observations than number of permits because of missing birthday information.

\* The number of transferable permits and the number of transfers exclude foreclosed permits. Mean ages may be based on fewer observations than the number of permits because of missing birthday information.

\*\* Age information is confidential when there are fewer than 4 permits.

**TABLE 4-3. Mean Ages of Transferable Permit Holders, Transferors, and Transferees by Resident Type\***

\* Transferable permits exclude foreclosed permits. The transferor count represents numbers of transfers from a resident type. The transferee (transfer recipient) count represents numbers of transfers to a resident type. Mean ages may be based on fewer observations than the number of permits because of missing birthday information.

**TABLE 4-4. Age Class Distribution of Transferable Permit Holders by Year and by Resident Type\***

## **V. TRANSFER SURVEY RESULTS**

## V. TRANSFER SURVEY RESULTS

CFEC has conducted a survey of transfer participants since 1975. The survey collects information on the relationship between transfer parties, whether the transfer was a gift,<sup>1</sup> sale, or trade, and for permits that were sold, the sale price and type of financing. The survey has been the source of information for CFEC permit price estimates, which are used by the Department of Commerce, Community and Economic Development (DCCED) and the Alaska Commercial Fishing and Agriculture Bank (CFAB) for fishing loan purposes.

During the period spanning 1975 to 1979, the survey was sent to all transferors and transfer recipients, but its completion was entirely voluntary and anonymous. Because many surveys were not returned, and because those that were returned could not be tied to other CFEC data, their usefulness was somewhat limited. Information from 1975 to 1979 transfer surveys is not included in this report, but may be found in the first edition published in 1983.<sup>2</sup>

In 1980 the survey was modified. It was tied to other CFEC data sources, and made mandatory for the transfer recipient to complete. In late 1983 the survey was expanded to include information from the transferor. Transfer survey results from 1980 to 2010 are presented in the following tables.

Even though the survey was made mandatory in 1980, strict enforcement of this rule did not occur until 1981. There were 139 transfers in 1980 and 15 transfers in 1981 without completed surveys. Note that in every year some transfers occurred for which a transfer survey was not completed. This accounts for the slight differences in the “Totals” columns between Table 2-1 and the tables in this chapter. The majority of transfers without surveys occur on DCCED or CFAB foreclosed permits. Overall, the surveys represent 98.4% of all transfers since 1980 (30,794 of 31,308 transfers).

### **Relationships of Transfer Participants**

Of the 30,794 transfer surveys received during from 1980 to 2010, 33.4% (10,291 surveys) indicated a transfer between immediate family members or other relatives, and 18.7% (5,750 surveys) indicated a transfer between friends or business partners. Permit exchanges between people who appeared to have no pre-existing relationship accounted for the

---

<sup>1</sup> Permits transferred as part of an inheritance are classified as gifts.

<sup>2</sup> CFEC “Changes in the Distribution of Permit Ownership in Alaska’s Limited Fisheries, 1975-1981,” February 1983.

remaining 43.1% (13,270) transfer surveys (Table 5-2).<sup>3</sup> Many individual permit types differ from the all years' statewide percentages.

From 1981 to 1989 for all permit types combined, the percentage of transfers between friend/partners decreased, while from 1989 to 2010 the percentage of transfers between friend/partners has remained relatively constant. The rewording of the "Friend" category on the survey form to "Personal Friend" in October of 1983 may be responsible for part of this decrease and may also account for the relatively sharp increase in the number of transfers between persons in the "Other" category in 1984.

When transfers are organized by the resident type of the transfer recipient, considerable variation in relationship patterns is evident among resident types (Table 5-2). Almost half of the transfers to Alaska Rural Locals, for all years combined, were from immediate family members and relatives (48.2% or 4,583 transfers), which is almost double that of some other resident types. In the remaining resident types, the "Other" category predominated.

#### **Permit Acquisition Method: Gift, Sale, Trade, and Other**

Under the Limited Entry Act's terms of free transferability, permits may be sold, traded, given away or inherited, thus enabling new participants to enter a fishery. During the 1980 to 2010 time period, transfer survey responses indicated that 59.9% of transfers for all permit types were sales (18,455 transfers), 35.1% were gifts (10,803 transfers), and 1.4% were trades (443 transfers). The remaining 1,093 transfers in the "Other" category comprised 3.5% of the survey responses (Table 5-3).

The incidence of gift transactions has accounted for roughly 30 to 40% of all transfers each year since 1980. Because gifts accounted for only 21.5% of all transfer survey responses in the 1975 to 1979 time period,<sup>4</sup> it has been suggested that the 1980 to 2010 percentage increase may be a result of efforts to enforce the prohibition on leasing permits. Therefore, some of the "Gift" responses may actually represent lease arrangements or carry reciprocal expectations.

Individual permit types often differ considerably from the statewide averages. While sale transactions predominated in most fisheries, more than a quarter (17) of the fisheries that transferred permits in 2010 transferred more than half the permits as a gift.

---

<sup>3</sup> If no transfers have occurred in a particular permit type the permit type will not be shown on the table.

<sup>4</sup> CFEC "Changes in the Distribution of Permit Ownership in Alaska's Limited Fisheries, 1975-1981", February 1983.

A breakdown of acquisition methods by the resident type of the transfer recipient is presented in Table 5-4. Since 1980, 49.3% (4,685) of the Alaska Rural Locals who have obtained permits through transfer have received them as gifts. Sales have accounted for roughly two thirds of the transfers to each of the other resident types over the time period.

### **Permit Prices**

In Table 5-5, mean and median permit prices are given by permit type and year for permit sales during the period 1980 through 2010. Surveys that indicated permit sale prices of less than \$500 have been excluded from the computations.<sup>5</sup> To ensure confidentiality, price statistics are not computed for permit types with less than 4 sales transactions per year; also, no value is reported for a permit if there were no sales transactions for that permit in a year. All of the prices are in nominal dollars, which do not reflect adjustments for general price inflation.

Permit prices vary for the same gear type used in different areas of the state (Table 5-5). For example, the median price of Salmon Drift Gillnet permits varied in 2010 from \$53,000 (Southeast) to \$119,530 (Prince William Sound).

The longest and most complete information on permit prices are in the salmon permit types. Prices in these permit types tended to increase until around 1990, then fell during the years 1993 to 2004. There has been a slight rebound in salmon permit prices between 2004 and 2010.

There can be dramatic fluctuations in values for some permits during specific periods. For example, the Prince William Sount Salmon Seine permit type fell from a median of \$250,000 in 1990 to \$14,000 in 2004; prices have since showed some rebound with a 2010 value of \$88,750. Alaska Peninsula Salmon Drift permits fell from a median of \$400,000 in 1993 to \$24,000 in 2003; they have since bounced back somewhat to a 2010 value of \$106,000.

### **Financing of Permit Purchases**

Transfer survey information on sources of financing used for 18,455 permit purchases is presented by permit type and year in Table 5-6. Beginning in 1990, additional data have been utilized from surveys in which more than one finance method was indicated.

---

<sup>5</sup> Permit price estimates produced for this report may differ from the CFEC estimated monthly permit value report due to the more stringent criteria used for exclusion for the monthly report.

Finance source data from 1980 to 2010 have been re-evaluated in the following manner:

1. Survey respondents may mark “Other” on the survey form if they feel their source of financing does not fit into the categories of personal resources, DCCED loan, CFAB loan, other bank loans, or loans from the transferor or a processor. A review of the comments associated with the surveys marked “Other” revealed that a large number of these involved unique methods of self-financing or loans from relatives or friends. Because of the strong association of the “Other” financing with that of the personal resources financing, those responses were combined and classified under a “Self/Other” category thus eliminating the nondescriptive “Other” category for the purposes of this report.
2. For surveys where 2 finance sources were indicated, but one of those sources was “Self/Other,” the finance source reported in tables of this study is that of the alternative finance source (other than the “Self/Other” category). The self-financing associated with permits financed by multiple methods is primarily in the form of a down payment or interim financing. The “Self/Other” category is intended to be representative of permit purchases that are primarily financed by personal resources rather than simply purchases involving a down payment (many financing methods involve a down payment).
3. Surveys involving three finance sources as well as the remainder of the two finance source surveys (i.e., those surveys that did not indicate “Self/Other”) are reported under the category of “Combination” financing in subsequent tables of this study.

Statewide, self-financing of permits has been the predominant method of finance, accounting for 66.8% of all purchases during the 1980 to 2010 time period (12,323 permits). The next most important source of financing has been the Department of Commerce, Community and Economic Development’s loan program with 15.0% (2,764 permits).<sup>6</sup> Transferors financed 6.1% (1,132 permits), banks and other private lending institutions financed 5.7% (1,061 permits), the Commercial Fishing and Agriculture Bank financed 2.5% (462 permits), and processors financed 1.1% (199 permits) of the permit purchases. The remaining 514 (2.8%) survey responses, which indicated multiple finance sources, were placed in the combination category.

Both the percentage and the number of permit sales financed by the transferor have declined significantly since 1980 (Table 5-6). In 1980, 142 transfers were financed by the seller (27.7%); in 2010 no transfers were seller-financed. The percentage of self-financed purchases has more than doubled since 1980. In 1980, there were 209 (40.7%) self-financed purchases, but in 2010 there were 606 (85.2%) self-financed purchases.

Sources of permit financing by resident type and year derived from the transfer survey are provided in Table 5-7. The most commonly used methods of financing for the 12,102

---

<sup>6</sup> The percentage of state-financed permits increases from 15.2% to 22.1% when only the purchases by Alaskan residents are considered (Table 5-7).

permits purchased by Alaskan residents were the personal resources (Self/Other) of the transferee (61.3% or 7,716 transfers) and DCCED authorized loans (21.8% or 2,741 sales). Urban Alaska residents have received 52.5% (1,440) of the 2,741 DCCED loans issued to Alaskans. Nonresidents have the highest rates of self-financing (78.6%) and of financing through the transferor (8.6%) of the permit.

### **Foreclosures on Permit Loans**

Table 5-8 shows the number of permit loans foreclosed upon by DCCED or CFAB over the 1982 to 2010 time period. By law, these are the only 2 lending entities that can accept an entry permit as collateral on a loan. The fewest loan foreclosures occurred in 1990 and 2008 (2 foreclosures in each year). The number of permits transferred to DCCED or CFAB began increasing in 1999 and spiked dramatically in 2002 with 45 foreclosures. The number of foreclosures has generally decreased each year since 2002.

Over the 1982 through 2010 period, the number of foreclosed permits was greatest for Alaska Rural Locals with 38.0% of the foreclosures (130 permits), followed by Alaska Urban Locals at 27.2% (93 permits). Alaska Urban Nonlocals and Alaska Rural Nonlocals had fewer foreclosures with 15.8% and 10.8%, respectively (54 and 37 permits). Nonresidents had the fewest foreclosures (8.2%, 28 permits). Nonresidents are not eligible for DCCED or CFAB loans, so those represented here were likely residents when they received the loan and subsequently changed residency status due to migration prior to foreclosure.

Permit prices of purchased permits with a value more than \$500 are considered in this table.

Permits that are foreclosed on are excluded in this report.

All instances with less than four transactions are masked due to reasons of confidentiality.

Table 5-6. Sources of Permit Financing by Permit Type and Year

\* The Department of Commerce, Community and Economic Development or the Commercial Fishing and Agriculture Bank (DCCED/CFAB) have transferred 334 of these permits.

\*\* By the end of year 2010, 8 permits were still held by DCCED/CFAB.

**VI. PERMIT TRANSFERS FROM ALASKA RURAL  
LOCALS TO OTHER RESIDENT TYPES**

## **VI. PERMIT TRANSFERS FROM ALASKA RURAL LOCALS TO OTHER RESIDENT TYPES**

The long-term effects of limited entry on rural coastal fishing communities have been of considerable interest to the legislature, the administration, and the public, especially the degree to which limited entry permits have been transferred away from rural fishing communities. From 1975 through 2010, approximately two-thirds (67.8%) of the 11,614 transfers made by Alaska rural locals have been to other Alaska Rural Locals. This percentage has been relatively consistent, ranging from a low of 62.2% in 1982 to a high of 74.8% in 1999 (Table 2-3). The remaining 32.2% (3,739) of the transfers since 1975 have been to other resident types (cross-cohort transfers). This section will present information regarding only the cross-cohort transfers from Alaska rural local residents (ARLs).

### **Transfer Activity Away From Alaska Rural Locals**

For all but two years since 1994, there has been a net increase in the number of permits held by Alaska Rural Locals as a result of transfer activity; the exceptions were in 1996 when there was a net decrease of 12 and in 2008 a net decrease of 2. In many earlier years, ARLs transferred more permits to other resident types than other resident types have transferred to them, resulting in an overall net decrease in ARL-held permits (Table 6-1). Through 2010, this cross-cohort transfer activity has resulted in a net decrease of 558 transferable permits held by ARLs. Each of the other resident types shows a net increase of transferable permits through their transfer activity with ARLs. The net increases were as follows: increase in permits held by Nonresidents was 184; Alaska Urban Nonlocal experienced a positive net increase of 163 permits; Alaska Rural Nonlocal augmented 94 permits; Alaska Urban Local added 87; and 30 for DCCED/CFAB. Note that permits held by each of the resident types may have increased or decreased in exchanges with resident types besides ARLs (Table 2-3).

Every year from 1976 through 1989 there was a net shift away from ARLs due to transfer activity, with fluctuations ranging from 10 to 94. The annual net decreases were generally smaller after the late 1980's then fluctuated back and forth around zero for a decade and has since sustained a general increase. The largest net increase over the 1975-2010 period occurred in 2000 when permits for ARLs increased by 49. In 2007, transfer activity resulted in a net increase of 29 permits.

Net transfer activity of ARL permits is presented in Table 6-2 for each permit type for all years combined. Similar data are presented in Appendix D by permit type and year.<sup>1</sup> The Bristol Bay Salmon Drift (261 permits) and Bristol Bay Salmon Setnet permit (155 permits) types have had the largest net decreases in counts of ARL-held permits due to transfer activity.

While the Bristol Bay permit types have had the highest numerical decreases in the number of permits held by ARLs, other permit types have had larger proportional decreases. There are four permit types (other than Bristol Bay permit types), with more than four initial permits issued to ARLs, that indicate a net decrease greater than 36.6% (Bristol Bay Salmon Drift). These are the Southeast Alaska Salmon Seine (62.3%), Peninsula/Aleutian Salmon Drift Gillnet (62.2%), Southeast Red, Blue, Brown (all) King and Tanner pot (60.0%), and the Prince William Sound Salmon Setnet (57.1%) fisheries. Transfers to the DCCED or CFAB through loan foreclosures and subsequent resale by these agencies are responsible for a net decrease of 30 ARL permits. The original 19 salmon fisheries limited in 1975 account for a net decrease of 32 ARL permits through transfer to DCCED or CFAB as well; there have been offsetting pluses and minuses in the other fisheries as well, for example, the 1976 fisheries had a net increase of 1 in DCCED/CFAB permits, and the 1997 fisheries had a net decrease of 1 of the DCCED/CFAB holdings. A net increase in ARL permit holdings due to resale from DCCED or CFAB are seen in 5 of the original 19 salmon fisheries limited in 1975: the SE Salmon Drift Gillnet; PWS Salmon Seine; Cook Inlet Salmon Drift; Kodiak Salmon Beach Seine; and the Peninsula/Aleutian Salmon Setnet fisheries.

Table 6-3 provides information concerning the relationships between transfer parties for 3,020 ARL cross-cohort transfers that occurred over the 1980-2010 time period for which there were transfer surveys. The information comes from the CFEC transfer survey. As might be expected, most (63.0%) cross-cohort transfers of ARL-held permits were between persons who had no previous relationship.<sup>2</sup>

### **Permit Financing Methods**

The methods used to acquire permits through transfers from ARLs to other resident types for the 1980-2010 period are presented in Table 6-4. Most (77.3%) of these cross-cohort transfers were

---

<sup>1</sup> If there have not been any transfers of a particular permit type, that permit/fishery will not be listed on the tables.

<sup>2</sup> The relationship question in the Transfer Survey form was reworded in October 1983 from “friend” to “personal friend.” This rewording may be responsible for part of the increase in the percentage of “other” responses after 1983.

sales (2,333 of 3,020) but considerable variation occurs across all limited entry fisheries. Other acquisition methods in the CFEC transfer survey include gift, trade, and other.

Transfer survey information on financing methods used in permit sales from ARLs to other resident types is provided in Table 6-5 by permit type and year. The most significant source of financing has been the personal resources of the buyer (69.1% - 1,612 out of 2,333). The percentage of each source of financing varies considerably among the fisheries, however.

The survey information also indicates that since 1984 there has been a dramatic decrease in the number of sales of ARL-held permits financed by the transferor. There have not been any ARL-held permits financed by the transferor since 1995.

**VII. PERMIT TRANSFERS FROM ALASKA LOCALS TO  
OTHER RESIDENT TYPES**

## **VII. PERMIT TRANSFERS FROM ALASKA LOCALS TO OTHER RESIDENT TYPES**

Local Alaskan permits, which are the combined permits from Alaska Rural Local (ARL) and Alaska Urban Local (AUL) resident types, are the focus of this section. Alaska local permits are defined as those permits held by persons who reside in the area near a limited fishery. Since 1975, 79.0% (15,622 transfers of 19,766) of all transfers from local Alaskans were made to other local Alaskans. The remaining 21.0% (4,144 transfers) were made to other resident types (Table 3-3). Tables in this chapter provide information on the cross-cohort transfers between Alaska local permit holders and other resident types. They are similar to tables in the previous section on Alaska Rural Locals.

### **Transfer Activity Away From Alaska Locals**

Over the 1975-2010 time period Alaskan locals transferred 4,144 permits to other resident types. Alaskan locals received 3,886 permits from other resident types, which resulted in a net decrease of 258 locally held permits. In every year from 1977 and 1996, the number of permits held by Alaska locals declined as a result of transfer activities with the nonresident and nonlocal resident types. Total net decreases were greatest in the years 1979 through 1986. Since 1997 the net shift of permits held by Alaska locals has been positive each and every year as the result of permit transfer.

In the 1975 to 2010 time period, the net increases within the other resident types due to transfer activity with Alaska locals were 142 permits held by Alaska Urban Nonlocals and 109 permits held by Alaska Rural Nonlocals. For permits held by Nonresidents, there was a net increase in the late 1970s through the mid 1990s; each year from 1997 through 2008 there has been an annual decrease. As of 2010 there was a net decrease of 29 permits held by Nonresidents. Transfers to the DCCED or CFAB through loan foreclosures and subsequent resale by these agencies with locals are responsible for total net decrease of 36 Alaska local permits.

The cumulative numbers of transfers to and from Alaska local permit holders are presented for each permit type in Table 7-2, and by permit type and year in Appendix E.<sup>1</sup> By the end of 2010, transfer activity resulted in a net decrease of permits held by Alaska locals in 24 permit types and net increases to Alaska locals in 36 permit types. Ten fisheries experienced a total net effect of zero as of 2010.

---

<sup>1</sup> Note that if there have not been any transfers for a particular permit type, that permit type will not be listed on the tables.

The greatest decreases in the number of permits held by Alaska locals have been in the Bristol Bay Salmon permit types (416 permits), the Peninsula/Aleutian Salmon Permit types (59 permits), the Prince William Sound Salmon permit types (56 permits), and the Salmon Hand Troll permit type (44 permits).

The Salmon Power Troll permit type showed the largest increase (133 permits) in number of permits to Alaska locals, followed by the Cook Inlet Salmon Drift (67) then the Kodiak Salmon Seine (49).

The relationship between transfer parties by permit type and year is presented in Table 7-3. Statewide, 64.2% of the survey responses indicating transfers from Alaska local residents to other resident types during the 1980 to 2010 period were between people who had no pre-existing relationship (2,167 out of 3,374).<sup>2</sup>

### **Permit Financing Methods**

Transfer acquisition methods are presented in Table 7-4. From 1980 to 2010, 76.2% of the transfers from Alaska locals to other resident types recorded on surveys were sales (2,570 of 3,374 transfers). Cross-cohort transfers appear more likely to be transfers between people without a pre-existing relationship and therefore are more likely to be sale rather than gift transactions.

Sources of permit financing are shown in Table 7-5 for 2,570 purchases where nonlocal buyers acquired permits from Alaska locals. For all permit types combined, 74.8% of the permit sales from 1980 to 2010 were financed through the personal resources of the transfer recipient. This figure is higher than the amount of self-financing by transfer recipients over all resident types (66.8%), reported in Table 5-7.<sup>3</sup> Both tables indicate that since 1980 the use of personal assets to buy permits continued to increase.

---

<sup>2</sup> The relationship question in the Transfer Survey form was reworded in October of 1983 from “friend” to “personal friend.” This rewording may be responsible for a portion of the increase in the percentage of “other” responses.

<sup>3</sup> Note that Table 22 includes both cross-cohort and intra-cohort permit purchases for each resident type.

\* Transfer survey information for foreclosed permits is not included. Alaska Local permit holders include both Alaska Rural Local and Alaska Urban Local resident types.

This page intentionally left blank.

**APPENDIX A.**

**DECISION RULES USED TO DESIGNATE  
URBAN, RURAL, LOCAL, AND NONLOCAL**

## **APPENDIX A. DECISION RULES USED TO DESIGNATE URBAN, RURAL, LOCAL, AND NONLOCAL**

Urban and rural designations are based upon the most recent information from Census 2000. Because previous editions of this report used 1990 census criteria, some changes have occurred in the rural/urban designations. In general, there are now more Alaska places designated as rural, and consequently more permits issued and held by rural residents.

For Census 2000, the Census Bureau significantly changed its method of classifying areas as rural or urban. The Census Bureau did not automatically recognize previously existing classifications of rural or urban. There was no "grandfathering" of areas that qualified based on the results of earlier censuses. The Census Bureau used advances in geographic information systems to automate the urban and rural delineation process.

### **Urban and Rural Classification**

For Census 2000, the Census Bureau classifies as "urban" all territory, population, and housing units located within an urbanized area or an urban cluster. It delineates these boundaries to encompass densely settled territory, which consists of:

1. Core census block groups or blocks that have a population density of at least 1,000 people per square mile and
2. Surrounding census blocks that have an overall density of at least 500 people per square mile

The Census Bureau's classification of "rural" consists of all territory, population, and housing units located outside of urbanized areas or urban clusters. Geographic entities, such as census tracts, counties, metropolitan areas, and the territory outside metropolitan areas, often are "split" between urban and rural territory, and the population and housing units they contain often are partly classified as urban and partly classified as rural.

### **Local/Nonlocal**

1. On the coast, local/nonlocal boundaries are linked to Commercial Fisheries Entry Commission administrative areas which are based on Fish and Game salmon management areas. Exceptions include communities that have been within more than one Fish and Game management area as a result of the movement of Fish and Game boundaries since 1975. These communities have been made local to both areas (see below). In addition, Cape Yakataga and Port Heiden are "overlap" areas that can contain more than one assigned permit and management area designation. Residents of these

two areas will be local for both relevant overlap areas. Lastly, residences in both Southeast and Yakutat are designated local to the hand and power troll fisheries.

The local/nonlocal distinction is linked to Commercial Fisheries Entry Commission administrative areas that are based on regulatory boundaries of the fishery. Some inland communities are considered local to fisheries in areas such as the Yukon River and Bristol Bay.

**Communities Local to More Than One  
Alaska Department of Fish and Game Management Area**

<b>Community</b>	<b>Local Management Areas</b>
Port Heiden	Bristol Bay/ Peninsula/ Aleutians
Cape Newenham	Bristol Bay/Kuskokwim
Cape Romanzof	Kuskokwim/ Lower Yukon
Chevak	Kuskokwim/ Lower Yukon
Hooper Bay	Kuskokwim/ Lower Yukon
Igiak	Kuskokwim/ Lower Yukon
Scammon Bay	Kuskokwim/ Lower Yukon
Aguikchuk	Kuskokwim/Nelson Island/Nunivak Island
Anogok	Kuskokwim/Nelson Island/Nunivak Island
Cheformak	Kuskokwim/Nelson Island/Nunivak Island
Inger	Kuskokwim/Nelson Island/Nunivak Island
Itulilik	Kuskokwim/Nelson Island/Nunivak Island
Kipnuk	Kuskokwim/Nelson Island/Nunivak Island
Mekoryuk	Kuskokwim/Nelson Island/Nunivak Island
Nash Harbor	Kuskokwim/Nelson Island/Nunivak Island
Nelson Island	Kuskokwim/Nelson Island/Nunivak Island
Newtok	Kuskokwim/Nelson Island/Nunivak Island
Nightmute	Kuskokwim/Nelson Island/Nunivak Island
Toksook Bay	Kuskokwim/Nelson Island/Nunivak Island
Tununak	Kuskokwim/Nelson Island/Nunivak Island
Cape Yakataga	Prince William Sound/ Yakutat
Pikmiktalik	Lower Yukon/Norton Sound
St. Michael	Lower Yukon/ Norton Sound
Stebbins	Lower Yukon/ Norton Sound

2. The Upper and Lower Yukon and Kuskokwim River fishery areas are based on immediate river drainages. The Lower Yukon area extends up the Yukon River to just above Holy Cross. The Upper Yukon "local" area extends up the Koyukuk tributary as far as Huslia, the Chandalar as far as Venetie and the Tanana to Delta Junction, 30 miles beyond the upper limits of commercial fishing on that river. The Kuskokwim local area extends 30 miles upriver beyond the limit of commercial fishing on that river and includes the Stony River tributary as far as Lime Village and the Holitna River as far as Kasheglok.
3. The Bristol Bay area extends inland up the Nushagak River and includes the entire Tikchik Lake system as well as Lake Iliamna and Lake Clark.
4. The Cook Inlet local area includes all but the eastern edge of the Anchorage Borough. The line dividing the Cook Inlet and Prince William Sound ADF&G regulatory areas is extended inland directly north. That is, the line runs from Cape Fairfield at 148°50'W, north to 61°32'N (just north of Bodenbug Butte and south of Palmer) and then west to 150°30'W (to the community of Susitna) and thereafter follows, at a little distance inland, the western shore of Cook Inlet, ending at Cape Douglas.

5. The Prince William Sound area extends up the Copper River to the confluence of the Bremner River. Taking in the census subareas of Prince William Sound and Cordova, but not the Copper River subarea. It excludes the interior Copper River as well as the Edgerton, Richardson and Glenn Highway communities.
6. Local/Nonlocal boundaries for the Westward Herring Fisheries are based on ADF&G regulatory districts rather than entire management areas. Herring stocks in Western Alaska are managed and permitted specific to these districts. The local definitions for these fisheries are based on the districts as defined in 1993 ADF&G Commercial Herring Fishing Regulations and extend 30 miles beyond those district boundaries. The districts therein are defined as waters bounded by specified coastline features or latitudes. The local/nonlocal definition includes population centers on the coast within those boundaries as well as within a 30-mile radius extending inland and beyond the northern and southern district boundaries. Because the Nelson Island and Nunivak Island districts overlap with respect to latitude and because pre-limitation permitting combined these fisheries, they will share the same local communities for the purposes of this study.

**Comparison of Local/Nonlocal and Urban/Rural Standards in this Report With Those in Dr. Steve Langdon's Permit Transfer Study.**

The designation of local fishery areas in this report differs from the version Langdon<sup>1</sup> used in that substantial areas of interior Alaska are declared "nonlocal" to any fishery on the assumption that these areas are not truly economically or traditionally oriented to commercial coastal or river fisheries. Certain offshore islands of the Bering Sea (St. Lawrence, St. George, St. Paul, St. Matthew and Little Diomedé) are also "nonlocal" to any commercial fisheries under limitation.

Beginning with the 1990 edition of this report, a population of 2,500 has been used in conjunction with 1990 Census figures for the threshold distinguishing urban from rural. Langdon used a threshold of 2,000 and 1978 population estimates obtained from the Alaska Department of Commerce, Community and Economic Development.

---

<sup>1</sup> See Langdon, "Transfer Patterns in Alaska Limited Fisheries," 1980.

The following tables show those towns that are classified as Rural and Urban in Census 2000.

Rural in 2000, Urban in 1990				
Adak	Fritz Creek	Nikishka	Ridgeway	Sterling
Chatanika	Homer	Nikiski	Salamatof	Two Rivers
Cleary Summit	Kalifonsky	Pedro Dome	Salcha	Valdez
Ester	Murphy Dome	Pleasant Valley	Seward	Womens Bay
Fox				

Rural in 2000, Not Classified in 1990				
Alcan Border	Chulloonawick	Gateway	Mentasta Lake	Red Dog Mine
Aleneva	Circle	Glacier View	Miller Landing	Seldovia Village
Alpine	Deltana	Harding-Birch Lks	Naukati	Silver Springs
Anaktuvuk Pass	Denali Park	Kalifornsky	Nelchina	Sutton-Alpine
Atqasuk	Diamond Ridge	Kasheglok	New Allakaket	Tenakee Springs
Attu Station	Dot Lake Village	Knik River	Nunam Iqua	Thoms Place
Bear Creek	Farm Loop	Knik-Fairview	Paylof Harbor	Tolsona
Beluga River	Fishhook	Lake Louise	Peters Creek North	Uyak Bay
Buffalo Soapstone	Four Mile Road	Lowell Point	Point Mackenzie	Willow Creek
Butte	Funny River	Marvel Creek	Pope-Vannoy Ldg	Y

ARN - Alaska Rural Nonlocal

AUN - Alaska Urban Nonlocal

NR - Nonresident

DCCED/CFAB - Department of Commerce, Community and Economic Development/Commercial Fishing and Agriculture Bank

\* Alaska Local permit holders include both Alaska Rural Local and Urban Local resident types.

\*\* Nonlocal shift is the summation of ARN, AUN and DCCED/CFAB (excludes NR) resident types.

This page intentionally left blank.

**APPENDIX F.**

**PERMIT FISHERY ORDERING AS FOUND IN THE  
CHANGES IN THE DISTRIBUTION OF ALASKA'S  
COMMERCIAL FISHERIES ENTRY PERMITS**

## APPENDIX F. PERMIT FISHERY ORDERING

Many of the tables in this publication present data on individual permit types. These tables are organized in one of two ways: the permit types are classified by the year in which the fishery was limited (e.g. Tables 2-2 and 3-1), or they are classified by geographic region, species, and then year (e.g. Tables 4-2 and 4-5).

The Table below shows the ordering of permit types in the second method of classification. Each permit fishery is associated with a CFEC permit code, which is also shown.

Order	Permit Fishery Description	Fishery Code
1	Salmon Power Troll	S15B
2	Salmon Hand Troll	S05B
3	SE Salmon Seine	S01A
4	SE Salmon Drift Gillnet	S03A
5	SE Roe Herring Seine	G01A
6	SE Herring Gillnet	G34A
7	NSE Herring Spawn on Kelp Pound	L21A
8	SSE Herring Spawn on Kelp Pound	L21C
9	NSEI Sablefish Longline	C61A
10	SSEI Sablefish Longline	C61C
11	SSEI Sablefish Pots	C91C
12	SE Red, Blue King Crab Pot	K19A
13	SE Red, Blue, Brown King Crab Pot	K29A
14	SE Brown King Crab Pot	K39A
15	SE Red, Blue King/Tanner Pot	K49A
16	SE Brown King/Tanner Pot	K59A
17	SE All King/Tanner Pot	K69A
18	SE Tanner Crab Pot	T19A
19	SE Dungeness Ring Net	D10A
20	SE Dungeness Dive	D11A
21	SE Dungeness 300 Pot	D9AA
22	SE Dungeness 225 Pot	D9BA
23	SE Dungeness 150 Pot	D9CA
24	SE Dungeness 75 Pot	D9DA
25	SE Shrimp Otter Trawl	P07A
26	SE Shrimp Beam Trawl	P17A
27	SE Shrimp Pot	P91A
28	SE Urchin Dive	U11A
29	SE Geoduck Dive	J11A
30	SE Cucumber Dive	Q11A
31	Yakutat Salmon Setnet	S04D
32	PWS Salmon Seine	S01E
33	PWS Salmon Drift Gillnet	S03E
34	PWS Salmon Setnet	S04E
35	PWS Roe Herring Seine	G01E
36	PWS Roe Herring Gillnet	G34E
37	PWS Herring Spawn on Kelp Pound	L21E
38	PWS Sablefish Net Gear	C4CE
39	PWS Sablefish Fixed 90ft	C5AE
40	PWS Sablefish Fixed 60ft	C5BE
41	PWS Sablefish Fixed 50ft	C5CE
42	PWS Sablefish Fixed 35ft	C5DE
43	PWS Sablefish Pots 50ft	C9CE
44	Cook Inlet Salmon Seine	S01H
45	Cook Inlet Salmon Drift	S03H
46	Cook Inlet Salmon Setnet	S04H
47	Cook Inlet Herring Seine	G01H
48	Cook Inlet Dungeness Ring Net	D10H
49	Cook Inlet Dungeness Pot	D91H
50	Kodiak Salmon Seine	S01K
51	Kodiak Salmon Beach Seine	S02K
52	Kodiak Salmon Setnet	S04K

Order	Permit Fishery Description	Fishery Code
53	Kodiak Roe Herring Seine	G01K
54	Kodiak Roe Herring Gillnet	G34K
55	Kodiak Roe Herring Seine/Gill	G31K
56	Kodiak Food/Bait Herring Seine/Gill	H1DK
57	Kodiak Food/ Bait Herring Trawl 75ft	H7BK
58	Kodiak Food/ Bait Herring Trawl 70ft	H7CK
59	Kodiak Food/ Bait Herring Trawl 60ft	H7DK
60	Kodiak Tanner Bairdi Pot 120ft	T9AK
61	Kodiak Tanner Bairdi Pot 60ft	T9BK
62	Chignik Salmon Seine	S01L
63	Peninsula/Aleutian Salmon Seine	S01M
64	Peninsula /Aleutian Salmon Drift	S03M
65	Peninsula /Aleutian Salmon Setnet	S04M
66	Bristol Bay Salmon Drift	S03T
67	Bristol Bay Salmon Setnet	S04T
68	Bristol Bay Herring Spawn on Kelp	L12T
69	Goodnews Bay Herring Gillnet	G34W
70	Kuskokwim Salmon Gillnet	S04W
71	Nelson Island Herring Gillnet	G34N
72	Nunivak Island Herring Gillnet	G34U
73	Lower Yukon Salmon Gillnet	S04Y
74	Lower Yukon Herring Gillnet	G34Y
75	Upper Yukon Salmon Gillnet	S04P
76	Upper Yukon Salmon Fish Wheel	S08P
77	Norton Sound Salmon Gillnet	S04Z
78	Norton Sound Her Beach Seine	G02Z
79	Norton Sound Herring Gillnet	G34Z
80	Kotzebue Salmon Gillnet	S04X
