

Emergency Transfers of Alaska's Commercial Fisheries Limited Entry Permits, 1975 - 2013

CFEC Report 14-5N
August 2014
Prepared by Kurt Iverson, Yvonne Fink, and Marcus Gho

State of Alaska
Commercial Fisheries Entry Commission
8800 Glacier Highway, Suite 109
Juneau, Alaska 99801

EO/ADA Compliance Statement

The Commission is administratively attached to the Alaska Department of Fish and Game (ADF&G).

The Alaska Department of Fish and Game (ADF&G) administers all programs and activities free from discrimination based on race, color, national origin, age, sex, religion, marital status, pregnancy, parenthood, or disability. The department administers all programs and activities in compliance with Title VI of the Civil Rights Act of 1964, Section 504 of the Rehabilitation Act of 1973, Title II of the Americans with Disabilities Act of 1990, the Age Discrimination Act of 1975, and Title IX of the Education Amendments of 1972.

If you believe you have been discriminated against in any program, activity, or facility please write: ADF&G ADA Coordinator, P.O. Box 115526, Juneau, AK 99811-5526. The department's ADA Coordinator can be reached via phone at the following numbers: (VOICE) 907-465-6077, (Statewide Telecommunication Device for the Deaf) 1-800-478-3648, (Juneau TDD) 907-465-3646, or (FAX) 907-465-6078. You may also contact the U.S. Fish and Wildlife Service, 4040 N. Fairfax Drive, Suite 300 Webb, Arlington, VA 22203 Office of Equal Opportunity, U.S. Department of the Interior, Washington DC 20240.

Abstract

Emergency Transfers of Alaska's Commercial Fisheries Limited Entry Permits, 1975 - 2013

CFEC Report 14-05N

August 2014

Prepared by

Kurt Iverson, Research and Planning Project Leader

Yvonne Fink, Licensing Project Leader

Marcus Gho, Economist

In 1973, the Alaska State Legislature passed a law authorizing a program to limit the number of permits in the state's commercial fisheries. Permits are issued to individuals, and are renewed annually. Most permits are fully transferable; within the parameters of state laws and regulations, permits can be sold, traded, given away, or inherited. The law also authorizes a means for the "emergency transfer" of permits, whereby an individual can temporarily transfer their permit to another person if a medical condition or other temporary and unforeseen event prevents them from fishing.

This report provides basic data and background information specific to emergency transfers of Alaska's commercial fisheries limited entry permits. The annual number of emergency transfers is shown by individual fishery and for all fisheries combined. Data is provided on the residency (rural/urban, local/ nonlocal, and Alaska/non-Alaska residents) and ages of persons who transfer and receive permits by emergency transfer. Summary information from a mandatory survey of the parties who emergency transfer permits is provided, showing the various reason(s) given for transfers, the relationships between the parties to emergency transfers, and the financial terms associated with transfers.

The report also provides details on emergency transfer regulations, and mentions some of the policy considerations for implementing the regulations.

Introduction

In 1972, Alaska's constitution was amended to allow limited entry in the state's commercial fisheries. Following the amendment, in 1973 the Alaska State Legislature enacted Alaska's Limited Entry Act, creating the state's limited entry program and giving the Commercial Fisheries Entry Commission (CFEC or commission) the responsibility for administering the program.¹

State statutes require that limited entry permits shall be issued only to individuals.² Permit holders must renew their permits annually. Most permits are transferable.³ Transferable permits can be sold, traded, or passed between individuals as gifts. Permits may also be conveyed as an inheritance. To permanently transfer a permit to another individual, the permit holder initially files a notice of intent to transfer with CFEC. After a 60-day period following the notice, CFEC can process the permit transfer.⁴ To receive a permit, the recipient must demonstrate a present ability to actively engage in the fishery.

In addition to authorizing the permanent transfer of limited entry permits, state statutes also provide a means for the temporary transfer of permits if an unforeseen event prevents the permit holder from fishing.⁵ Emergency transfers allow a permit to be temporarily held and fished by someone other than the permanent permit holder when "... illness, death, disability, required military or government service, or other unavoidable hardship of a temporary, unexpected, and unforeseen nature prevents the transferor from participating in the fishery."

Unless the commission specifies otherwise, an emergency transfer is effective until the nature of the emergency ends, or until the end of the season, whichever comes first. At that point, the permit will, by default, go back to the original holder.

Permanent and emergency transfers are governed by state statutes and regulations. CFEC staff must carefully review the terms of each transfer to ensure the transaction conforms to the laws and regulations. Current regulations for emergency transfers can be found at 5 AAC 05.1740 and are shown in full in Appendix B.

Basic Procedures for Granting an Emergency Transfer

To initiate an emergency transfer, a permit holder completes the CFEC form *Request for Emergency Transfer of Entry Permit*. The form requires the transferor to explain in detail the nature of the emergency, and, if it is a medical emergency, to provide a statement from the examining physician indicating the onset of the condition, the diagnosis, and the treatment.

¹ AS 16.43.100.

² AS 16.43.990 (7).

³ AS 16.43.170.

⁴ For permit transfers from estates, the 60-day notice is waived.

⁵ AS 16.53.180.

The parties to an emergency transfer are required to provide the terms of their agreement. They also indicate the status of their relationship. Each party completes his/her respective section; the form is signed by both parties and is notarized.

If the basis for an emergency transfer continues into the following year, CFEC may grant a second transfer for the second year. After the second year, CFEC will not grant an emergency transfer unless the permit holder demonstrates an extraordinary circumstance that is allowable under the regulations.

There are no special provisions under the law authorizing CFEC to issue emergency transfers due to old age or for chronic medical problems. Nor are matters of choice, such as working another job, acceptable under the regulations as reasons for granting an emergency transfer.

CFEC staff place a high priority on processing emergency transfers. For example, in 2012, 96% of the requested transfers were processed within four days of their receipt at CFEC. In the event of a sudden emergency during the fishing season, a transfer will often be completed immediately by CFEC staff. The recipient of the transferred permit can begin fishing as soon as practicable using a copy of the completed emergency transfer form signed by CFEC staff. The recipient's embossed plastic CFEC "permit card" is mailed to them within two days.

If an applicant's request for an emergency transfer is denied by the CFEC Licensing staff, regulations allow the applicant to contest the denial by requesting an administrative hearing before a CFEC paralegal or hearing officer.⁶ As a quasi-judicial agency, CFEC hearings are governed by administrative procedural rules, including rules of evidence. Decisions are issued based upon the record. As with all emergency transfers, hearings requested during the fishing season are given high priority, and are normally resolved within one to three days. Most hearings are conducted by telephone. Since 2000, CFEC paralegals and hearing officers have addressed an average of twenty emergency transfer appeals each year (Table 1).

Following a decision by a hearing officer or paralegal, applicants may appeal again if they so desire, this time by filing a petition for administrative review to the CFEC commissioners. Relatively few requests for emergency transfers are appealed to the commissioners. However, to ensure consistency with the governing statutes and regulations, all transfer cases that were brought to a paralegal or hearing officer are eventually reviewed by the commissioners. At their discretion, the commissioners may issue a concurring opinion or overturn the hearing officer's ruling. In reaching their decision, the commission's review may also offer clarifications of law or regulations.

⁶ 20 AAC 05.1760.

Table 1. Administrative Hearings for Requests of Emergency Transfers of Limited Entry Permits, 2000-2013			
Year	Number of Administrative Hearings	Emergency Transfer	
		Granted	Denied / Dismissed / Withdrawn
2000	27	22	5
2001	13	8	5
2002	15	13	2
2003	18	13	5
2004	6	2	4
2005	14	8	6
2006	14	11	3
2007	13	8	5
2008	12	7	5
2009	29	15	14
2010	29	15	14
2011	26	12	14
2012	25	* 13	* 12
2013	45	* 23	* 22

Granted emergency transfers include all instances where the permit was transferred and subsequently used during the fishing season. In a small number of cases, emergency transfers may have been approved by hearing officers and the permits fished, but the emergency transfer decision was reversed by the commission after the season.

** Figures are not final and are subject to change pending administrative review.*

Regulation Changes

Emergency transfers are based on the premise of providing relief to permit holders when they are faced with a temporary hardship that prevents them from fishing. Alaska statutes generally prohibit the leasing of entry permits, but regulations specify exceptions in the case of emergency transfers.⁷ The rules provide individuals an opportunity to mitigate some of their difficulty by gaining back a portion of the revenue they lost by not fishing, and, as a policy consideration, help dependent individuals retain their permits over the long term.

Emergency transfer regulations were first adopted in 1975 and are specifically authorized by statute.⁸ The basic criteria for a transfer were originally written as follows:

⁷ AS 16.43.150(g) and 20 AAC 05.1705.

⁸ AS 16.43.180 and currently 20 AAC 05.1740; formerly 20 AAC 05.740.

The commission will grant an emergency transfer if the proposed transferee is presently able to participate actively in the fishery and if the transferor establishes that sickness, injury, or other unavoidable hardship prevents him from participating in the fishery.

Since then, the regulations have been amended several times. It appears that the most significant changes were made in the early 1980s. For example, in January 1980, the section was rewritten to specify the terms for the emergency transfer of interim-use permits, and to provide additional examples of unavoidable hardship:

The commission will grant an emergency transfer of an entry or interim-use permit if the proposed transferee is not a permit holder in the fishery and is presently able to participate actively in the fishery, and if it is established that illness, disability, death, required military or government service, or other unavoidable hardship prevents the transferor from participating in the fishery.

And in January 1983, a new section was added that put limits on granting emergency transfers repeatedly over subsequent years:

Except for extraordinary circumstances, requests for an emergency transfer in subsequent years will be considered only upon a showing of a new unavoidable hardship of an unexpected and unforeseen nature which prevents the permit holder from fishing.

Then later, in November 1994, a “subsequent years” provision was amended to allow an emergency transfer on the same basis for a second year. Apart from the changes noted above, other minor modifications have been made to the regulations, none of which have significantly altered the basic criteria for an emergency transfer.

Emergency Transfers of Non-transferable and Interim-use Permits

Some limited entry permits are non-transferable. Under the statutes, when CFEC determines that limited entry is necessary in an open-access fishery, the agency first establishes the maximum number of permits that will be issued. Following adoption of the maximum number, CFEC develops a point system that ranks individuals who apply for a permit. The point system rankings reflect the relative hardship an applicant would bear if excluded from the fishery. Within the hardship rankings, the agency is required to determine a minor economic hardship point level. Eligible applicants who accrue points at or below the minor economic hardship level are issued non-transferable permits. Non-transferable permits remain valid for the permit holder’s lifetime, but they cannot be passed to other individuals and the permits are permanently forfeited when the permit holder dies. All limited entry permits – both transferable and non-transferable – must be renewed each year, and can be revoked if the permit holder fails to renew the permit for two consecutive years. From 1975 through 2013, CFEC issued a total of 16,565 limited entry permits: 14,189 were transferable, and 2,376 were non-transferable.

Emergency transfers of non-transferable permits are permissible, but only under certain conditions consistent with regulations.⁹ The transfer request must usually come during the fishing season, and will be granted only to allow the continued operation of a vessel or set gillnet site and fishing gear, or in the case of an underwater dive fishery, the transferor's dive fishing operation.

Interim-use permits (IUP) issued in limited entry fisheries are also authorized for emergency transfers. State statutes and regulations specify that if a fishery is undergoing a moratorium or limited entry program, and an applicant's status is not yet finalized, CFEC is authorized to grant an emergency transfer of the applicant's interim-use permit.¹⁰ The standard for granting an emergency transfer of an IUP is not as rigorous as that of transferring a standard permanent permit. Under the IUP circumstances, the statute calls for granting an emergency transfer "...to alleviate hardship." Moreover, interim-use permits may be transferred repeatedly from one year to the next. It is likely the legislature adopted this more relaxed standard due to concerns that the interim-use permit holder cannot permanently transfer their permit until their permit claim has been made final by the commission.

The more lenient standard for granting emergency transfers for interim-use permits has raised questions in the past. At present, however, the vast majority of permit applications have been adjudicated, and there are far fewer instances where these standards might apply.¹¹

Moreover, the commission has attempted to contain interim-use emergency transfers by providing the following restrictive definition of hardship in 20 AAC 05.1770(13):

"hardship," with respect to the emergency transfer of interim-use permits, means privation and suffering, and does not include the results of a permit holder's own economic decisions, nor the results of economic, biological, or regulatory variables which are normally part of the risk of doing business as a fisherman.

There is a provision in the regulations that allows emergency transfers of interim-use permits in open-access fisheries. The transfers would occur only under special circumstances that allow a fishing operation to continue if obtaining another interim-use permit is exceptionally time-consuming or difficult.¹² These circumstances have occurred very rarely and were more common in the past, when communication technology was less developed.

Other Emergency Transfers Specifically Authorized by Statute

AS 16.43.180 also authorizes the temporary emergency transfer of entry permits in the event of required military or government service, or if a permit becomes part of an estate due to the death of a

⁹ 20 AAC 05.1740 (b).

¹⁰ AS 16.43.180 and 20 AAC 05.1740 (a).

¹¹ As of August 1, 2014, twenty-nine applications were pending a final determination, and the applicants might qualify for an emergency transfer of their interim-use permit. Seven applications were before hearing officers, 21 were before the commission, and 1 was under remand to the commission from the Alaska Superior Court.

¹² 20 AAC 05.1740 (b).

permit holder. Regulations allow permits in an estate to be emergency transferred beyond two years, pending the final disposition of the permit holder's assets.¹³

The statutes that apply to required military or government service were added by the Legislature in 1978, and the definitions for the services are provided in the regulations.¹⁴ Included in this service category are assignments required by law in federal, state, or local governments. This also includes some forms of voluntary service, provided the service is not the permit holder's primary occupation. Most commonly, transfers in this category apply to permit holders who serve on the Alaska Board of Fisheries or in the Alaska Legislature, and who have to forgo fishing in order to serve the State. Military service by persons who serve in the National Guard or other military reserve forces would also be included.

Emergency Transfer-Permanent Transfers (ET-PT)

To initiate a *permanent* transfer of an entry permit, a permit holder must first file a *Notice of Intent to Transfer* form with CFEC. After the form is received, there is a 60-day waiting period before the permanent transfer can take place.

Occasionally, emergency (temporary) transfers arise out of situations where two parties have a permit sale agreement, but the required waiting period interferes with the recipient's ability to participate in the fishery. Under these circumstances, CFEC will consider issuing an Emergency Transfer-Permanent Transfer, or ET-PT. The transaction is first processed as a temporary transfer, which allows the recipient to use the permit immediately. Then, at a point in time past the 60-day waiting period, a second transfer is administered to secure the transaction permanently. The permanent transfer typically occurs after the fishing season ends.

An ET-PT is issued by CFEC with strict requirements. The parties to the sale must first submit all the required documents for the eventual sale of the permit. They must also provide a signed statement specifying why the temporary transfer is necessary to avoid lost fishing time due to the 60-day waiting period. The documents are carefully reviewed and validated by the licensing staff before granting and processing the temporary transfer.

Since 1994, CFEC has issued 1,870 ET-PTs. A small number of ET-PTs (130, or 7% of the total ET-PTs¹⁵) have failed to result in a permanent transfer between the two parties after the ET was issued. The majority of these were the result of unforeseen and often tragic circumstances to one of the parties of the transfer. For example, after an ET is issued the subsequent sale might fall through if the permanent permit holder dies and the permit enters probate. Divorces, accidents, and other personal circumstances might also prevent the intended sale. In some cases, CFEC has had reason to question whether the parties to the transaction might be attempting to use an ET-PT to circumvent the medical or true emergency requirements of a traditional emergency transfer. Under these circumstances, CFEC staff will require additional information before completing the transfer. It is not uncommon for CFEC to deny a re-

¹³ 20 AAC 05.1740 and 05.1750.

¹⁴ § 5 ch 123 SLA 1978 and 20 AAC 05.1770 (a) (11) and (12).

¹⁵ CFEC internal licensing statistics.

quest for an ET-PT. As with all denials of permit transfers, the applicants have the right to appeal the denial to a hearing officer.

Emergency Transfers of Two Years or More

As mentioned, an emergency transfer is effective until the nature of the emergency ends, or until the end of the season (in practice, normally the end of the calendar year), whichever comes first. At that point, the permit will, by default, go back to the original holder.

The regulations do, however, authorize a second emergency transfer when the condition that prevented the permit holder from participating in the fishery persists, and prevents the permit holder from participating in the following year.¹⁶ This portion of the regulations was passed in 1994, although prior to that time, commission policy had allowed repeated transfers under certain circumstances.

Allowing two years helps the commission address situations where emergencies might last more than one year but the nature of the emergency does not prevent an individual from fishing at a point in time in the future.

The conditions under which emergency transfers may be extended beyond two years are currently specified as follows:

- (1) *a new unavoidable hardship of an unexpected and unforeseen nature that prevents the permit holder from fishing; or*
- (2) *a continuation of the basis for the first emergency transfer in addition to extraordinary circumstances; for purposes of this paragraph, "extraordinary circumstances" are circumstances beyond the control of the permit holder that can be addressed by granting an emergency transfer, such as*
 - (A) *the failure of a good faith attempt to participate in the fishery;*
 - (B) *a realistic intent to return to the fishery within a reasonable period of time after the first emergency transfer based upon a high probability of removal of the disability or unavoidable hardship that gave rise to the first emergency transfer; or*
 - (C) *an intent to permanently transfer the permit that cannot presently be fulfilled in spite of substantial, good faith efforts to do so; "extraordinary circumstances" do not include the effects of economic, biological, or regulatory variables that are normally part of the risk of doing business as a fisherman, such as an economic choice, retirement from the fishery, permanent illness or disability, or lack of a market for the sale of a permit.*

¹⁶ 20 AAC 05.1740 (i).

This subset of regulations emphasizes extraordinary circumstances and potential hardship faced by permit holders. Using this standard, the commission may review transfers on a case-by-case basis, and focus more highly on the nature and extent of a situation that might give rise to an emergency transfer. As a matter of policy, the commission must attempt to hit a balance between portions of the law that disallow the leasing of permits and avoiding the potential of creating of a class of “absentee landlords” of fishing permits, while at the same time adhering to other portions of the law that allow emergency transfers, with the goal of serving fishermen and fishing families who have legitimate intentions of remaining in the fishery but who are faced with a temporary hardship.

Following the second grant of an emergency transfer, licensing staff warn the permit holder in writing that future emergency transfers are unlikely to be granted and will only be considered if the applicant can show a new or an extraordinary circumstance.

As previously noted, AS 16.43.180 authorizes continuing emergency transfers for interim-use permits, or for permits that are part of an estate. Permits held by persons who are committed to certain government services are also allowed emergency transfers that might go beyond two years.

Another class of permits that could be emergency transferred for more than two years are those associated with the *Wassillie* court settlement. *Wassillie* class members were allowed to apply for permanent entry permits in the salmon fisheries long after the qualification date due to misadvice or lack of adequate assistance they received during the original application period. By the time the case was settled and individual claims had been adjudicated, many of the successful applicants were elderly and too disabled to participate in the fishery. The commission allowed these applicants an extraordinary circumstances status to compensate for the years they were excluded from the fishery. This status also allowed successful *Wassillie* applicants to emergency transfer their permits for more than two consecutive years.

General Notes on the Data Presented in the Tables

CFEC issues two general classes of commercial fishing permits: interim-use permits and limited entry permits. Limited entry permits are issued in fisheries that have undergone limitation. Interim-use permits are issued primarily in open-access fisheries, but they are also issued to individuals in limited fisheries during the period when a person’s application for a limited permit is being processed, and also during the period after the fishery has been limited, but before the application period begins. All CFEC permits are defined by regulation as a distinct combination of a finfish or shellfish species, a gear type, and an administrative area.

The first limited entry permits were issued in 1975 in 19 of the state’s salmon fisheries. Since then, more fisheries have been limited at different points in time. By the end of 2013, limited entry permits had been issued in 65 fisheries: 26 salmon fisheries; 19 herring fisheries; 9 crab fisheries; 5 sablefish fisheries; 3 shrimp fisheries; and 3 dive fisheries (geoduck, sea cucumber, and sea urchin).

In some limited fisheries, CFEC created more than one permit type to help constrain increases in fishing power. Some of the permit constraints restrict the amount of gear that can be used, while others limit

the length of the vessel. In other fisheries, non-severable permits were issued which combine permissible gear types and/or harvestable species. To date, a total of 79 permit types have been issued in the 65 limited fisheries.¹⁷

Appendix A provides a table that lists the state's limited entry fisheries, and shows statistics on the number of permanent permits initially issued. The table is excerpted from the CFEC report *Changes in the Distribution of Alaska's Limited Entry Permits, 1975-2013*.

Some sections of this report provide time-series data for individual fisheries. In particular, for fisheries shown in Table 4, the first year in the time series corresponds to the year when limited entry was adopted and limited permits (either permanent or interim-use) were first issued for the fishery. Normally, the bulk of limited entry permits are issued within the first two years after a fishery is limited; however, some permits might not be issued for several years if a person's application is denied and the applicant contests their initial determination through the CFEC appeals process. Applicants who are awaiting final adjudication of their permit claims can continue to fish using interim-use permits during the intervening period. As a result, unless otherwise noted, figures referring to the 'total number of permits' in a fishery represent the combined totals of interim-use and permanent permits for each respective year. On occasion, a person might hold both an interim-use permit and a permanent permit in a fishery in the same year. In these circumstances, the tables count only the permanent permit in the 'total number of permits' category.

Four distinct fisheries were subject to a moratorium on new participants prior to the date when CFEC implemented the fishery's limited entry program. The fisheries and the respective moratorium years include the Southeast Alaska Dungeness crab pot fishery (1992-1996) and the Southeast Alaska sea urchin, sea cucumber, and geoduck dive fisheries (1996-2000). Because statutes authorize emergency transfers of interim-use permits in fisheries subject to a moratorium, the moratorium years are included in the tables for these respective permit types.

Not all limited entry fisheries are shown in the fishery-specific Tables 5, 9, and 10. If no emergency transfers have occurred in a permit fishery, it will not appear in the tables.

Data for Table 8 (Relationship of Parties in the Transfer), Table 11 (Reasons for Transfer), and Table 12 (Terms of the Transfer) come primarily from the survey portion of the CFEC emergency transfer forms. In a small number of cases, the survey data is incomplete, which accounts for the differences in the totals between these tables and the tables that summarize all emergency transfers.

Emergency transfer forms have changed over the years, including the survey questions that were added to the forms in 1994. Many of the statistics in this report are therefore restricted to the years from 1994 through 2013.

¹⁷ By the end of 2013, maximum number regulations had been adopted for 66 limited fisheries. No permanent entry permits have been issued for the Prince William Sound sablefish pot gear fishery; therefore, the permit type does not appear in this report. In addition, 2 fisheries were placed under a vessel limited entry program from 2004. Statutes that enabled one of the vessel-permit programs were allowed to sunset by the Alaska Legislature in 2013. Traditional emergency transfers were not authorized in the vessel-permit program.

Number of Emergency Transfers

Table 2: Summary of Emergency Transfers of Alaska's Limited Entry Permits, All Fisheries Combined

Table 3: Interim-Use Permits (IUP) in Emergency Transfers

Table 4: Summary of Emergency Transfers by Permit Type, 1975-2013

Table 2 provides a summary of the number of emergency transfers of limited entry permits for each year since 1975. The total number of permits eligible for an emergency transfer is provided in the second column. This figure includes the sum of all limited entry and interim-use permits that were issued in limited fisheries, plus any interim-use permits that may have been issued in fisheries that were temporarily subject to a moratorium on new entrants. From the 1970s through 2004, as more fisheries came under limitation, the total number of issued permits increases.

Five categories of emergency transfers are shown for each year. The annual rate of emergency transfers is expressed as the total number of emergency transfers relative to the total number of eligible permits that were issued. The rates tended to rise steadily each year from 1975 to 1994, which was the year with the highest annual rate of emergency transfers, at 6.5% of all permits. After falling somewhat through the period of the late 1990s to 2002, rates again began to rise, and in 2011, the rates reached 6.2%. The long-term rate of emergency transfers over the entire 1975-2013 period was 5.6%.

Table 2 also helps illustrate how the number of emergency transfers steadily rose over time to peak in the years from 1993 through 2000. These years correspond to a period of high earnings in the salmon fisheries statewide. The bulk of emergency transfers occur in the salmon fisheries.

Note that the categories for ET-PT and Government Service do not show any transfers until 1994 and 1995, respectively. This is an artifact of data collection: emergency transfer survey forms did not include a means to track the categories prior to 1994. Although there are no statistics for the categories before 1994, ET-PT and Government Service emergency transfers were in fact granted as far back as the mid-1980s.

Also note that Table 2 provides unique counts of emergency transfers of interim-use permits and permits associated with estates; however, the two categories are not completely exclusive from one another. In many cases, the death of a permit holder who held an interim-use permit in a limited fishery is good cause for an emergency transfer of his/her permit until the permit holder's estate can be fully settled. Table 3 helps illustrate the overlap of the two categories. Within the interim-use permit category, a substantial number of transfers in each year are associated with estates, typically ranging from 25% to 35% of the total IUP transfers - in some years, IUPs associated with estates approach nearly one-half of the annual IUP emergency transfer total. For the sake of establishing either/or categories, Table 2 groups these blended IUP/Estate transfers into the interim-use permit category.

Table 4 provides data similar to Table 2, but breaks out the information by individual fisheries. The first year in a permit fishery series corresponds to the year when interim-use permits or permanent permits were first eligible for emergency transfer in the fishery.

Table 2. Summary of Emergency Transfers of Limited Entry Permits for All Fisheries Combined, 1975-2013

Year	Total Permits Issued	-- Category of Emergency Transfer --					Total Emergency Transfers	Rate of Emergency Transfers
		ET-PT	Interim-Use Permits	Estates	Government Service	All Other

Notes:

- 1) 'Total Permits Issued' represents permits eligible for emergency transfer. It is the sum of all permanent and interim-use permits issued in limited fisheries or in fisheries that were subject to a temporary moratorium on new entrants. If a person held both an interim-use permit (IUP) and a permanent permit in the same year for a fishery, only the permanent permit is counted.
- 2) Some emergency transfers of IUPs are the result of a permit holder's mandatory government service, or because the IUP has become part of an estate. In this table, all transfers of IUPs are combined in the 'Interim-use Permits' column. For a detailed breakout of categories of transfers of interim-use permits, see Table 3.
- 3) Emergency transfer surveys were not in place prior to 1994; as a result, data for 'ET-PT' and 'Government Service' transfers are not available for those years.

Data provided in Table 4 indicates that within salmon management areas, set gillnet permits tend to have somewhat higher rates of emergency transfers than other permit types. One notable exception is the set gillnet fishery in Cook Inlet, where the permits have a moderately low all-years emergency transfer rate of 2.8%.

Among salmon drift gillnet permits, the highest average emergency transfer rate is in the Bristol Bay fishery, at 8.5%. The highest rate for salmon purse seine permits is in the Chignik fishery, with an all-years average transfer rate of 10.9%.

Among all fisheries, the highest rates of emergency transfers are consistently found in the sablefish longline fisheries in Southeast Alaska, where rates have fluctuated from roughly 20% to 50% of the permits since 2000. For permits in both the Northern and Southern Southeast sablefish fisheries, a substantial number of the emergency transfers were associated with interim-use permits. Emergency transfers of IUPs are subject to a somewhat less rigorous standard for approval than permanent permits, as was explained in previous sections. The Southeast king crab fisheries show similar trends as the sablefish fisheries, with relatively high emergency transfer rates, again influenced by a significant number of interim-use permits.

Table 4 illustrates how individual fisheries can influence statewide statistics on emergency transfers. The combined set and drift gillnet salmon fisheries in Bristol Bay typically represent from 35 to 40 percent of the annual emergency transfers processed by CFEC. The drift gillnet fishery alone, which has the highest number of permit holders of all limited entry fisheries, frequently accounts for over 200 emergency transfers per year.

Table 4 also indicates that some permit types account for minimal or no emergency transfers over lengthy periods of time. These permits usually apply to fisheries that have been closed, either for conservation reasons or due to market conditions. Notable examples include permits for Cook Inlet Dungeness crab, Bristol Bay herring roe on kelp, and the herring fisheries in Prince William Sound and Cook Inlet. Other permits, such as those for the herring fisheries in Western Alaska - Goodnews Bay, Nelson and Nunivak Islands, Cape Romanzof, and Norton

Sound – also show very low emergency transfer rates. Again, this is probably due to inconsistent participation in the fisheries, which have been impacted in recent years by market conditions.

The moratorium years in the Southeast Alaska Dungeness crab pot fishery were from 1992 through 1996. Table 4 shows two classes of permits issued for the fishery in those years, depending upon the length of the participating vessel: under 50 feet, or 50 feet and over. When the moratorium ended and a limited entry program was implemented in 1997, the regulations created four classes of Dungeness crab permits, each one corresponding to a specific number of allowable pots. As a result, the tables in the fishery-specific sections of this report show Southeast Alaska Dungeness crab permits separated into distinct types for moratorium and post-moratorium years. The Southeast Alaska dive fisheries were also subject to moratoria from 1996 through 2000. However, unlike the Dungeness crab fishery, the permit types for the dive fisheries did not change between the moratorium years and the years following limited entry; the permit designations stayed the same, and the fishery-specific tables reflect this.

There is a separate anomaly with permits for the Southeast Alaska pot shrimp fishery. For the first six years of limited entry from 1996 through 2001, two permit types were issued. By 2002, one of the permit types had been phased out, leaving only the “Southeast shrimp, pot gear” (no vessel length specified) permit type.

Similar to Table 2, the figures in Table 4 for ‘Total Permits Issued’ represent the sum of interim-use permits and permanent permits that were issued in fisheries that were subject to limited entry. ‘Total Permits Issued’ therefore represents the number of permits that were eligible for emergency transfer in each year. On occasion, a person will hold both an interim-use permit and a permanent permit in a fishery in the same year. In these circumstances, the tables count only the permanent permit in the ‘Total Permits Issued’ column.

Notes:

- 1) *Total Permits Issued represents the number of permits eligible for emergency transfer. It is the sum of limited entry and interim-use permits that were issued in a fishery. If a person held both an interim-use permit and a permanent permit in the same year for a fishery, only the permanent permit is counted.*
- 2) *Some transfers in the interim-use permit (IUP) category were the result of mandatory government service or were part of an estate. See Table 3.*
- 3) *The first year in a permit fishery series corresponds to the year when limited entry was implemented and permits were first eligible for emergency transfer.*
- 4) *The Southeast Alaska Dungeness crab (1992-1996) and the sea cucumber, sea urchin, and geoduck dive fisheries (1996-2000) were subject to moratoria on new entrants prior to implementation of limited entry. Moratorium interim-use permits are eligible for emergency transfer.*

Emergency Transfers of One or More Years

Table 5: Consecutive Years of Emergency Transfers, by Permit Type, 1994-2013

Previous sections of this report discuss the circumstances where an individual might be allowed to emergency transfer a permit repeatedly for more than one year. Briefly, emergency transfers are authorized for up to two years if a person has a medical condition that persists into the second year. New and unexpected medical conditions might also give rise to repeated emergency transfers. Required military or other government service, or issues involving the settlement of a permit holder's estate are other potential reasons where a permit could be emergency transferred across consecutive years. Individuals who hold interim-use permits in limited fisheries might transfer their IUPs for more than one consecutive year, and *Wassillie* class members who received permits were granted a status that allowed them to repeatedly transfer their permits.

Emergency transfers that are used to facilitate a permanent transfer (ET-PT) are often associated with repeat transfers. A common scenario involves individuals who suffer a medical condition(s) that prevents them from fishing for one or two years. Following this, the individual might decide to permanently transfer away their permit, but to facilitate the transaction they need to request an ET-PT. This would result in emergency transfers over consecutive years.

Table 5 indicates the scope of consecutive emergency transfers. To assess repeat transfers, the data was examined for each unique person / permit combination. The third column (Year 1) indicates the number of permits that were emergency transferred by persons who did not ET their permit in the immediately preceding year. The fourth column (Year 2) shows the number of unique person/permit combinations that were in their second consecutive year of emergency transfer. The fifth column (Year 3) shows person/permits with three years of repeated emergency transfers, etc.

Note that some permits are emergency transferred to more than one individual in a year. In roughly 1 in 30 occasions, a person will emergency transfer their permit, then have to withdraw the transfer and issue a second one to a different individual later in the same year. In Table 5, these instances are not included as "repeat transfers" because they occur in the same year. This methodology also accounts for the slight differences in the sum of transfers between Table 5 in this section and Tables 2 and 4 in the previous section.

Also note that Table 5 will slightly over-estimate repeat transfers for fisheries with seasons that begin late in the year and cross over into the next calendar year. Most commonly, this applies to the salmon hand and power troll fisheries and the Southeast geoduck dive fishery. For example, to emergency transfer a geoduck dive permit for an entire season, an individual might transfer their permit for the portion of the fishery that occurs in December; then, to continue the ET, they would need to request a second transfer for the remaining part of the season in January of the next year. Transfers of this type will slightly inflate the figures for repeat transfers in Table 5.

The time-series in the table extends back to 1994, when the survey portion of the current emergency form began. If no emergency transfers have occurred in a particular permit fishery, it will not be listed in the table.

On average, 37.9% of the emergency transfers in a year were also transferred in one or more of the previous years. The number and percentage of ETs that occurred for four or more continuous years was highest in the mid-1990s and peaked in 1999 at 15.8% of all emergency transfers; this percentage has subsequently dropped, and has ranged from 10.0% to 11.5% over the last three years. The decrease might be related to a drop in the number of *Wassillie* class members who held permits, as well as a general reduction in the number of interim-use permits in all fisheries. Emergency transfers of interim-use permits are subject to a less rigorous regulatory standard than emergency transfers of permanent permits, and may lead to repeated transfers.

The highest rates of consecutive emergency transfers have been for permits in the Southeast Alaska sablefish fisheries and king crab fisheries. Again, this may be related to a proportionally high number of interim-use permits. Economic returns to permit holders might also influence the rates of emergency transfers, as these fisheries are characterized by relatively high ex-vessel earnings and high permit values.

Notes:

1) Permit fisheries with no emergency transfers are excluded from the table.

2) If the first year in a permit fishery series is after 1994, the year corresponds to when limited entry was implemented and permits were first eligible for emergency transfer.

3) The Southeast Alaska Dungeness crab (1992-1996) and the sea urchin, sea cucumber, and geoduck dive (1996-2000) fisheries were subject to moratoria on new entrants prior to implementation of limited entry. Moratorium interim-use permits are eligible for emergency transfer.

4) Some permits are emergency transferred to more than one individual in a year. These are not part of the sum of repeat transfers because they occur within the same year. This accounts for the slight differences in the total sum of transfers between this table and Tables 2 and 4 in this report.

Emergency Transfers by Resident Type and/or Relationship

Table 6: Number of Emergency Transfers Between Resident Types, 1994-2013

Table 7: Rates of Emergency Transfers by Resident Type, 1994-2013

Table 8: Relationship of Emergency Transferors and Transfer Recipients, by Resident Type, 1994-2013

Table 9: Relationship of Emergency Transferors and Transfer Recipients, by Permit Type, 1994-2013

This section provides statistics on emergency transfers of permits based upon where the permit holders reside. Permit holders who live in Alaska are classified into rural or urban communities and local or nonlocal groups.¹⁸ Nonresidents of Alaska are classified in a separate category. Each permit then falls into one of five classifications, depending upon the residence of the permit holder:

Alaska resident of a **Rural** community which is **Local** to the permitted fishery;

Alaska resident of a **Rural** community which is **Nonlocal** to the permitted fishery;

Alaska resident of an **Urban** community which is **Local** to the permitted fishery;

Alaska resident of an **Urban** community which is **Nonlocal** to the permitted fishery;

Nonresident of Alaska.

Table 6 examines emergency transfers solely by resident type. Intra-cohort transfers refer to permit exchanges that occur between persons of the same resident type. Cross-cohort transfers are those that occur between individuals who have separate resident types. Since 1994, approximately two-thirds (65.0%) of all emergency transfers have been between individuals of the same resident-type (intra-cohort). The annual rate has varied very little, ranging from 62.3% to 67.6%.

Permits held by Alaska Rural Locals (ARL) account for the highest number of emergency transfers (ARLs also hold the greatest number of total permits; see Table 7). From 1994 through 2013, 43.8% of all permits emergency transferred were from the ARL resident type. Within the ARL classification, approximately three-fourths (73.9%, or 5,331) of the transfers were to other ARLs, while the remainder of the ARL transfers (26.1%, or 1,884) were cross-cohort transactions where the permits went from ARLs to individuals in one of the other four resident types.

Emergency transfers from nonresidents are the next most numerous class of transfer. Since 1994, Nonresidents transferred 4,376 permits: 2,915 (66.6%) went to other Nonresidents, and 1,461 (33.4%) were transferred to persons with an Alaska residency.

Table 7 compares the number and percentage of limited entry permit holdings for each resident type (the sum of permanent and interim-use permits that are eligible for emergency transfer) with the resident type's number and percentage of emergency transfers. The figures again indicate that Alaska Rural Locals hold the highest number of permits. The table also shows that the ARL all-years average rate of

¹⁸ Rural and urban classifications conform to designations determined under the United States Census 2010. Local and nonlocal boundaries closely align with Alaska Department of Fish and Game management areas.

emergency transfers closely corresponds with the ARL percentage of permit holdings; however, the relative portion of the total emergency transfers by this resident type has declined somewhat since 1994.

Statistics for Alaska Urban Locals (AUL) indicate their percentage of emergency transfers is significantly less than their percentage of total permits, suggesting this resident group tends to emergency transfer their permits at a lesser rate than others. The opposite appears to be true for Nonresidents and for Alaska Urban Nonlocals (AUN): each of these resident types account for a smaller percentage of permit holdings relative to their total emergency transfers.

Tables 8 and 9 present the relationships of the parties involved in emergency transfers. The data indicates that roughly two-thirds of all emergency transfers have occurred between individuals who know one another. On average over all fisheries, 39.1% of the emergency transfers have been between family members (the sum of Immediate Family and Other Relative), and 29.5% have occurred between Friends/Partners.

Alaska Rural Locals have a significantly higher rate of emergency transfers to family members (49.6%), and a lower rate to the Friend/Partner(s) (22.7%) than the other resident types. Nonresidents record the lowest rates of transfers to family members (23.1%) and the highest rates (36.4%) to persons with whom they have no prior relationship (category 'None').

For permit fisheries with a moderately high number of annual emergency transfers (20 or more per year, Table 9), those with comparatively high rates of transfers between persons who have no pre-existing relationship include Southeast salmon drift gillnet (47.4%), Prince William Sound salmon drift gillnet (43.8%), and Bristol Bay salmon drift gillnet (40.4%). Permit fisheries that show high rates of emergency transfers between family members include Kuskokwim salmon gillnet (87.7%), Lower Yukon salmon gillnet (84.2%), and Bristol Bay salmon set gillnet (48.7%). Friends/Partners are the predominate receivers of emergency transfer permits in the Northern Southeast Inside sablefish longline fishery (51.2%), and the Kodiak salmon set gillnet fishery (48.7%).

Note that Table 9 shows only the years when emergency transfers occurred for each permit type. If no emergency transfers occurred for a particular permit type and year, it is excluded from the table.

Notes:

1) 'Total permits' represents all permits eligible for emergency transfers. It is the sum of permanent and interim-use permits issued in limited fisheries or in fisheries that were subject to a temporary moratorium on new entrants. If a person held both an interim-use permit (IUP) and a permanent permit in the same year for a fishery, only the permanent permit is counted. 'Total permits' excludes a small number of permits that were temporarily held by the Department of Commerce, Community, and Economic Development (DCCED) at year-end.

2) 'Total Emergency Transfers' excludes one emergency transfer in 2001 from DCCED.

Figures in this table summarize data collected from the survey portion of the CFEC emergency transfer form. The survey was first implemented in 1994. During the transition, 431 emergency transfers were processed without surveys, which accounts for the differences in the totals between this table and other tables in this report that summarize all emergency transfers.

Notes:

- 1) Permit fisheries and years with no emergency transfers are excluded from the table.
- 2) Figures in this table reflect data collected from the survey portion of the CFEC emergency transfer form. The survey was first implemented in 1994. During the transition, 431 emergency transfers were processed without surveys, which accounts for differences in the totals between this table and other tables in this report.
- 3) If the first year in a permit fishery series is after 1994, the year corresponds to when limited entry was implemented and permits were first eligible for emergency transfer.
- 4) The Southeast Alaska Dungeness crab (1992-1996) and the sea urchin, sea cucumber, and geoduck dive fisheries (1996-2000) were subject to moratoria on new entrants prior to implementation of limited entry. Moratorium interim-use permits are eligible for emergency transfer.

Ages of Permit Holders in Emergency Transfers

Table 10: Ages of Emergency Transferors and Transfer Recipients by Permit Type

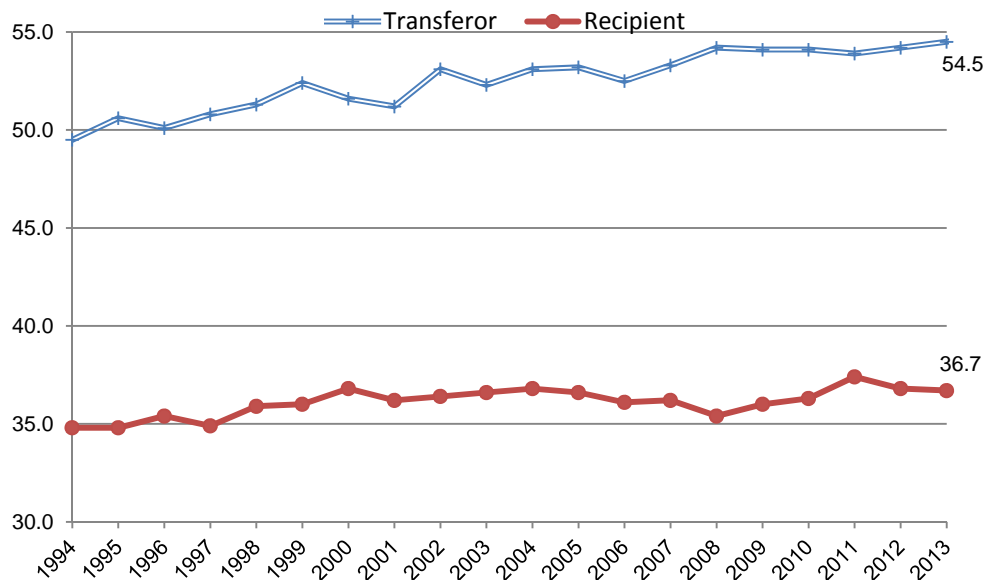

Table 10 uses data from CFEC permit files to examine the ages of persons involved in emergency transfers. Statistics are shown for both the transferor (permanent permit holder or IUP holder) and for the transfer recipient (temporary holder of the permit in an emergency transfer).

The data indicates that persons who receive permits via emergency transfer tend to be considerably younger than the persons who transfer the permits. Averaged over all years and all fisheries, the difference is 16.4 years (Table 10; *All Permit Fisheries*). The average age of emergency transferors has gradually increased over time, as indicated in Figure 1, and currently stands at 54.5 years. This increase in age follows a general pattern observed throughout the state: the average age for all limited entry permit holders has steadily increased since 1980, and now stands at 49.7 years.¹⁹

Permit types that show a significant variance from the overall average (and which also have a moderately high number of emergency transfers) include permits for the Southeast Alaska sablefish and salmon purse seine fisheries, and the combination king crab pot fisheries. For each of these permit types, the average age of persons who emergency transferred their permits is relatively high (over 60 years in age). This contrasts with fisheries where the permit transferors tend to be younger, such as the Southeast sea cucumber dive fishery, the Kodiak salmon set gillnet, and Kuskokwim salmon gillnet fisheries (under 46 years of age).

Note that individual permit holders' birthdates are confidential. If fewer than four emergency transfers occurred in a fishery, the average age is redacted and marked with an asterisk in Table 10.

Notes:

- 1) Age and birthdate information is confidential. Data is redacted with an asterisk if there are fewer than 4 emergency transfers.
- 2) Permit fisheries with no emergency transfers are excluded from the table.
- 3) If the first year in a permit fishery series is after 1994, the year corresponds to when limited entry was implemented and permits were first eligible for emergency transfer.
- 4) 'Number of permits' is the sum of permanent and interim-use permits that were eligible for emergency transfer in limited fisheries or in fisheries that were subject to a moratorium on new entrants. If a person held both an interim-use permit and a permanent permit in the same year for a fishery, only the permanent permit is counted. One emergency transfer in 2001 from DCCED is excluded from the totals.

Reasons for Emergency Transfers and Terms of Transfer

Table 11: Emergency Transfer Survey: Reasons Given for Transfers, by Year

Table 12: Emergency Transfer Survey: Terms of Remuneration to the Transferor, by Year

As detailed in previous sections, emergency transfers allow an entry permit to be temporarily fished by someone other than the permanent permit holder if illness, death, disability, required military or government service, or other unavoidable hardship occurs unexpectedly and temporarily.

Restricting the scope of how permits may be used by someone other than the permanent permit holder is necessary to align provisions for emergency transfers with other statutes that specify that an entry permit should be held only by persons who presently have the ability to participate in the fishery.²⁰ Emergency transfers are intended to provide relief to persons who are actively engaged in a fishery but who are faced with a temporary and unplanned difficulty that prevents them from fishing.

One requirement for the emergency transfer of a permit is for the parties to complete the CFEC form *Request for Emergency Transfer of Entry Permit*. In completing the transfer form, the applicant must supply detailed and corroborating information that indicates the nature of the emergency. If the reason relates to a medical condition, the applicant must also include a statement from a doctor. Along with the detailed information, one section of the emergency transfer form asks permit holders to select one of eleven categories of "Reason for Transfer". Table 11 summarizes that information.

An analysis of the survey questions on the emergency transfer form should take into account that each transfer is not only reviewed to ensure that it conforms to the regulations, but is also considered for its situational merits. Specific and unique facts define each transfer, beyond what is summarized by the survey questions. It is not uncommon that in upholding the regulations, licensing staff ask for more information. It is also common practice for CFEC staff to deny a transfer, but at the same time encourage the permit holder to ask for a review by a hearing officer, where the nuances of the transfer can be more properly considered.

The following are notes that help explain the "Reasons for Transfer" selections on the emergency transfer form, as summarized in Table 11:

Medical Necessity: Injury or Accident / Illness or Other Health Problem / Pregnancy

The combined sum of these causes makes up slightly more than two-thirds (68%) of the reasons given for emergency transfers. Approximately one-half (49.7%) of all emergency transfers have been for illnesses or other health problems (including those involving immediate family members). If an immediate family member requires the care or attention of a permit holder due to an unexpected illness or medical condition, this might constitute grounds for an emergency transfer. Note that "Immediate family member" is defined in regulation.²¹ Accidents or injuries account for another 13.8%, and pregnancy is listed for 3.8% of the emergency transfers.

²⁰ AS 16.43.170.

²¹ 5 AAC 05.1770 (a)(10)

To establish grounds for an emergency transfer due to medical reasons, the transferor must provide a sworn statement from an examining physician indicating the onset of the condition, the diagnosis, and the treatment. This information helps the commission's review of the transfer request to ensure that the medical condition prevents the permit holder from fishing.

Death of the Permit Holder or of an Immediate Family Member of the Permit Holder

The sudden death of a permit holder is grounds for the family or permit holder's estate to emergency transfer the permit. Permits that are part of an estate may be emergency transferred beyond two years, pending the final disposition of the permit. To authorize continuing transfers in this category, CFEC staff currently requests documentation of the settlement status of the estate. A death of a permit holder's immediate family member can also be a valid reason for an emergency transfer.

Required Government or Military Service

As discussed in previous sections, emergency transfers of this type are authorized by statute. Military and government service are defined in the regulations. Depending upon the specific circumstances, either of these reasons might provide the basis for emergency transferring a permit for more than two consecutive years.

Incarceration

When a commercial fisherman is convicted of a crime and is sentenced to incarceration, the commission may consider an emergency transfer to prevent economic hardship to the permit holder's immediate family. Transfers are approved only with the stipulation that all monetary proceeds resulting from the transfer go directly to the needs of the family, and only if the family was supported by fishing income prior to the incarceration. Many transfers in this class involve temporarily passing an entry permit to an adult member of the family - someone who is capable of fishing the permit and using the proceeds to help support dependent family members. Other common examples include using the fishing proceeds to help make child support payments, or to prevent a family permit from falling into foreclosure, or to satisfy a household tax debt. In other cases, the commission may consider granting an emergency transfer to an incarcerated person who has not yet been convicted of a crime.

Financial or Economic Hardship

The Economic Hardship category refers to relatively rare cases where an entry permit has been pledged as collateral for a loan through DCCED/CFAB. DCCED and CFAB are the only lending agencies allowed to use entry permits as collateral. If an individual has offered a permit as collateral and falls behind on their loan payments, the lender can initiate foreclosure on the permit. Under these circumstances the commission will consider granting an emergency transfer of the permit, provided that all the monetary proceeds from the transfer are used to help prevent foreclosure on the loan. Before issuing an emergency transfer in this fashion, the commission requires complete documentation of the foreclosure and how the loan payments will be made.

School or Training

Mandatory school or training might force a permit holder to temporarily leave a fishery. This situation most commonly applies to minor children who hold permits in family set gillnet operations. The category does not apply to elective educational pursuits like college or vocational training for high school graduates.

Other

This category is selected by applicants when the reason for their transfer does not have an apparent fit into any of the other listed categories. The most common instance in the 'Other' category is when an emergency transfer is used to facilitate the permanent transfer of a permit (ET-PT). ET-PTs are discussed in greater detail in the previous section. The 'Other' category also includes cases where an individual obtains a permit through a right of survivorship, but they are not prepared to immediately fish the permit or to sell it. Another common scenario that fits this category is when a legal guardian seeks to dispense of a permit on behalf of a permit holder who has become incapacitated.

Working at Alternate Employment and Retirement

Although 'Retirement' was listed on past emergency transfer forms and 'Working at Alternate Employment' is still on the forms, neither of these reasons, standing alone, would result in an emergency transfer. In fact, 'Retirement' is explicitly mentioned in CFEC regulations as a reason that does not justify an emergency transfer.²²

Instead, these two reasons were placed on the form to add clarification for the ultimate dispensation of a permit after it is emergency transferred for a valid reason. Either of the selections must be combined with other permissible reasons, such as a temporary medical condition. In Table 11, only the category 'Working at Alternate Employment' is listed; it was marked by applicants in very rare instances (17 out of 16,044 emergency transfers). Although 'Retirement' was also listed as a selection on the emergency transfer forms for a period of time, it was never actually used - a tally indicates zeros for all years for that particular selection, therefore it is omitted from Table 11.

Terms for Use of the Permit

Table 12 provides statistics on another section of the emergency transfer form, where permit holders select one of seven choices that help document the terms under which the transfer will take place. Generally, leasing the fishing rights associated with a state limited entry permit is prohibited; however, regulations grant an exception for permits that have been emergency transferred.²³ The law allows permit holders to receive some form of remuneration if they are forced to temporarily forgo fishing. Regulations protect the permanent permit holder by automatically transferring the permit back into the permanent permit holder's name at the end of the year or at the end of the fishing season.

²² 20 AAC 05.1740 (i)(2)(C).

²³ 20 AAC.05.1705.

The data indicates the most common form of compensation to the permanent permit holder is a percentage of the earnings garnered by the person who temporarily fishes the permit. Flat fees to the permit holder are also common, and the proportion of this type of transaction appears to be increasing. In roughly 1 out of 4 emergency transfers, the permanent holder indicates they do not receive direct monetary compensation from the transfer. It is likely that many of the transactions in that category are tied to emergency transfers among family members.

“No answer given”, as indicated in Table 12 is merely a literal accounting of the check-boxes on the emergency transfer survey form. In practice, all permit holders must relate the terms of compensation for the transfer. On occasion, the boxes on the form are inadvertently left unchecked (this was especially prevalent for five years in the 1990's), but no transfers are actually processed without this information, and the terms of the transfer are detailed in ancillary documents in the CFEC files.

Figures in this table summarize data collected from the survey portion of the CFEC emergency transfer form. The survey was first implemented in 1994. During the transition, 431 emergency transfers were processed without surveys, which accounts for the differences in the totals between this table and other tables in this report that summarize all emergency transfers.

Appendix B: CFEC Emergency Transfer Regulations

20 AAC 05.1740. Emergency transfers.

(a) A holder of an entry permit or interim-use permit in a limited fishery or a fishery subject to a moratorium may apply for an emergency transfer of the entry or interim-use permit to another person by making application to the commission on a form provided by the commission.

(b) The commission will grant an emergency transfer of an entry permit if the proposed transferee is not a permit holder in the fishery and is presently able to participate actively in the fishery, and if it is established that illness, disability, death, required military or government service, or other unavoidable hardship of a temporary, unexpected, and unforeseen nature prevents the transferor from participating in the fishery. If the entry permit is not transferable under AS 16.43.170(e), the emergency transfer will be granted only to allow the continued operation of the transferor's vessel or setnet site and fishing gear. Temporary emergency transfer of an interim-use permit issued under AS 16.43.210(b), 16.43.225, or 16.43.227 or of a permit held by an estate will be granted by the commission to alleviate hardship. Temporary emergency transfer of an interim-use permit in an unlimited fishery issued under AS 16.43.210(a), will be granted by the commission if reasonably necessary in order for the fishing operation to continue until another permit may be obtained.

(c) Where illness, disability, or death precludes communication by the transferor, the commission will, in its discretion, authorize the emergency transfer of an entry permit or interim-use permit upon application by a person other than the transferor.

(d) Unless otherwise limited by the commission, an emergency transfer is effective until the emergency is over, or until the end of the season, or until the transferor submits a request that the permit be returned, whichever occurs first.

(e) The proposed transferor and transferee of an emergency transfer under this section shall provide information and executed releases for information the commission determines is reasonably necessary to establish the basis upon which the emergency transfer is requested. Sufficient proof to verify the basis of the transfer must be submitted when the transfer request is made.

(f) Repealed 1/29/82.

(g) Where illness, disability or other unavoidable hardship, as described in (c) of this section, began or death occurred within 14 days immediately preceding the mailing date of a properly completed Request for Emergency Transfer of Permit form, the commission or an agent of the commission may certify the application as complete by dating and signing the form. The commission agent will not certify the form as complete unless the form is accompanied by an envelope addressed to the commission with adequate postage. The proposed emergency transferee may fish with the carbon copy of the form for no more than 14 days following the date the form was certified as complete, unless extended by the commission. Upon approval of the request for emergency transfer, the commission will issue a temporary permit card to the emergency transferee. Upon denial of the request, the commission will notify the permit holder and proposed transferee of its decision and of the fact that fishing with the carbon copy of the application form is no longer authorized.

(h) A proposed emergency transferee of a permit may not fish with a carbon copy of a Request for Emergency Transfer of Permit form if the

- (1) form has not been signed and dated by an agent of the commission;
- (2) request is based on a circumstance, described in (b) of this section, that arose more than 14 days before the form is received by the commission;
- (3) annual permit renewal form and fee have not been received and processed by the commission.

Appendix B: CFEC Emergency Transfer Regulations

(i) If the commission grants an emergency transfer and the basis for the emergency transfer continues at the time the transferor applies for an emergency transfer for the following season, the commission will grant an emergency transfer for that following season. For subsequent seasons, the commission will grant an emergency transfer only upon a showing by the permit holder of

(1) a new unavoidable hardship of an unexpected and unforeseen nature that prevents the permit holder from fishing; or

(2) a continuation of the basis for the first emergency transfer in addition to extraordinary circumstances; for purposes of this paragraph, "extraordinary circumstances" are circumstances beyond the control of the permit holder that can be addressed by granting an emergency transfer, such as

(A) the failure of a good faith attempt to participate in the fishery;

(B) a realistic intent to return to the fishery within a reasonable period of time after the first emergency transfer based upon a high probability of removal of the disability or unavoidable hardship that gave rise to the first emergency transfer; or

(C) an intent to permanently transfer the permit that cannot presently be fulfilled in spite of substantial, good faith efforts to do so; "extraordinary circumstances" do not include the effects of economic, biological, or regulatory variable that are normally part of the risk of doing business as a fisherman, such as an economic choice, retirement from the fishery, permanent illness or disability, or lack of a market for the sale of a permit.

(j) The transferor may revoke an emergency transfer at any time by submitting to the commission or an agent of the commission

(1) a completed Request for Return of Original Permit Card form provided by the commission; and

(2) the permit card.

(k) A permittee may not fish with a copy of the Request for Return of Original Permit Card form unless the form has been submitted to the commission through an agent of the commission, and that agent has certified the application as complete by dating and signing the form. A permittee may submit to the commission an otherwise properly completed Request for Return of Original Permit Card form that is not signed and dated by an agent; however a copy of the form may not be retained for fishing.

(l) For the purposes of receiving and certifying as complete a Request for Emergency Transfer of Permit form and a Request for Return of Original Permit Card form, an employee of the Department of Fish and Game or of the Department of Public Safety, division of fish and wildlife protection, is an agent of the commission.
