VI. PERMIT TRANSFERS FROM ALASKA RURAL LOCALS TO OTHER RESIDENT TYPES

The long-term effects of limited entry on rural communities dependent upon fishing have been of considerable interest to the legislature, the administration and the public, especially the degree to which limited entry permits have been transferred away from these communities. Since 1975, about two-thirds (66.9%) of the 8,036 transfers made by Alaska Rural Locals have been to other Alaska Rural Locals. This percentage has been relatively consistent, ranging from a low of 60.8% in 1982 to a high of 74.7% in 1999 (Table 5). The remaining 33.1% (2,656) of the transfers since 1975 have been to other resident types (cross-cohort transfers). This section will present information regarding only the cross-cohort transfers from Alaska Rural Local residents.

In every year except 1975, 1990, 1997 and 1999, cross-cohort transfers by ARLs have resulted in a net decrease in ARL-held permits -- in other words, ARLs have transferred more permits to other resident types than other resident types have transferred to them (Table 23). Through 1999, this cross-cohort transfer activity has resulted in a net decrease of 710 transferable permits held by Alaska Rural Locals. Each of the other resident types gained permits through their transfer activity with Alaska Rural Locals; the net gains were as follows: Alaska Urban Nonlocals gained 27 permits, Alaska Urban Locals gained 79 permits, Alaska Rural Nonlocals gained 309 permits, and Nonresidents had a net gain of 275 permits Note that each of the resident types may have either gained or lost permits in exchanges with other resident types besides Alaska Rural Locals.

From 1977 through 1986, decreases of permits held by Alaska Rural Locals due to net transfer activity ranged from 23 to 93 permits per year. Since then the annual net decreases have been substantially less, and in 1990, 1997 and 1999, the number of permits held by Alaska Rural Locals increased as the net result of transfer activity.

Net transfer activity of Rural Local permits is presented in Table 24 for each fishery for all years combined. Similar data are presented in Appendix D by fishery and year. The Bristol Bay drift and set gillnet fisheries have had the largest net numerical decreases in rural local permits due to transfer

137

¹ If there have not been any transfers of a particular permit type, that permit/fishery will not be listed on the tables.

activity (222 and 169 permits, respectively), which represents 55.1% (391 of 710 permits) of the statewide ARL net transfer decrease.

While the Bristol Bay fisheries have had the highest numerical decreases in the number of permits held by ARLs, other fisheries have had larger proportional decreases. There are 8 fisheries (other than Bristol Bay fisheries) with more than 5 permits issued to ARLs with net decreases greater than 25%

Table 25 provides information concerning the relationships between transfer parties for 2,047 Alaska Rural Local cross-cohort transfers that occurred over the 1980-1999 time period. The information comes from the CFEC transfer survey. As might be expected, most (61.5%) cross-cohort transfers of ARL-held permits were between persons who had no previous relationship.²

The acquisition method used in permit transfers from Alaska Rural Locals to other resident types for the 1980-1999 period is presented in Table 26. Most (78.2%) of these cross-cohort transfers were sales (1,601 of 2,047).

Transfer survey information on financing methods used in the permit sales from Alaska Rural Locals to other resident types is provided in Table 27 by fishery and year. The predominant source of financing has been the personal resources of the buyer (62.0%). DCED loans are also an important source of financing for buyers of permits held by ARLs (17.6%). These figures differ from the Alaska resident totals in Table 22 and suggest that other resident types who buy ARL-held permits tend to rely slightly more on self-financing and banks and less on state loans than do Alaska residents as a whole.

The survey information also indicates that since 1984 there has been a sharp decrease in the number of sales of ARL-held permits which have been financed by the transferor.

_

² The relationship question in the Transfer Survey form was reworded in October 1983 from "friend" to "personal friend." This rewording may be responsible for part of the increase in the percentage of "other" responses after 1983.
