

CHANGES IN THE DISTRIBUTION OF ALASKA'S COMMERCIAL FISHERIES ENTRY PERMITS, 1975-2011

CFEC Report Number 12-1N-EXEC

Alaska Commercial Fisheries Entry Commission
8800 Glacier Highway Suite 109
P.O. Box 110302
Juneau, Alaska 99811-0302
(907) 789-6160

ABSTRACT

This report provides detailed information on changes in the distribution of permanent entry permits in Alaska's limited fisheries. From 1975 through 2011, 79 permit types have been issued in 65 fisheries. The report provides both statewide and fishery-specific data on the number of permit transfers, the geographic distribution of permit holders, changes due to permit transfers, changes due to the relocation of permit holders and the year-end 2011 geographic distribution of permit holders.

The report also includes extensive information on the age of permit holders, age differences between transferors and transfer recipients, the incidence of intra-family and business partner transfers, transfer acquisition methods, and financing of permit purchases. The information contained in the report is derived from the Commercial Fisheries Entry Commission's permit and transfer survey files.

The report is published as two separate documents: an executive summary and the principal report, which is primarily a reference document.

I. INTRODUCTION

I. INTRODUCTION

In 1973, the Alaska State Legislature enacted Alaska's Limited Entry Act (AS 16.43) for commercial fisheries. The act established a new agency, the Commercial Fisheries Entry Commission (CFEC), to administer a program regulating entry into commercial fisheries under state jurisdiction. Limited entry was implemented in most of the salmon fisheries in 1974. By the end of 2011 permanent limited entry permits had been issued in 65 commercial fisheries:¹ 26 salmon fisheries, 19 herring fisheries, 9 crab fisheries, 5 sablefish fisheries, 3 shrimp fisheries and 3 dive fisheries (sea urchin, sea cucumber, and geoduck). In some limited fisheries, more than one type of permit was issued to help contain increases in fishing power. Some permits constrain the amount of gear that can be used while others constrain the length of the vessel. In some limited fisheries, non-severable permits were issued that combine permissible gear types while other permits combine harvestable species. To date, a total of 79 permit types have been issued in the 65 limited fisheries.

A legal prerequisite of the Limited Entry Act was that permits could not be locked in the hands of those who were originally issued them (i.e., 'initial issuees').² After much study and debate, the legislature chose free transferability as the method for allowing permit holders to enter and exit from the fisheries.

Free transferability allows the transfer of permits from parents to their children, and allows family members to inherit a permit upon the death of a permit holder, as well as sale of permits on the open market. It allows persons to enter and exit fisheries at times opportune to them, and eliminates the need for an expensive and time-consuming bureaucratic process to handle permit reallocation. Free transferability facilitates permit exchange and promotes overall efficiency. Many other transfer options were considered but were found lacking with respect to these criteria.

¹ By the end of 2010, maximum number regulations have been adopted for 66 fisheries. No permanent entry permits have been issued in the Prince William Sound sablefish pot gear fishery, and therefore the fishery does not appear in this report. In addition, 2 fisheries are under a vessel limited entry program, and are also not reported herein.

² Note that initial issuance refers to the issuance of a new permit whenever it occurred. Because some applicants are difficult to classify under a hardship ranking system, a final determination of their standing may come only after an extensive hearing and adjudicatory process. In other instances, permits have been issued as lawsuits brought against the commission are resolved. Thus, some permits have been issued several years after the main body of permits were issued for a given permit type.

In 1983, the Alaska Supreme Court ruled on the *State of Alaska v. Ostrosky*,³ which challenged the constitutionality of the Limited Entry Act, particularly the free transferability provisions. The court upheld the constitutionality of both the Act and of free transferability and also affirmed the legislative objectives in adopting the transferability option. The decision was subsequently allowed to stand by the United States Supreme Court when it dismissed the Ostrosky appeal in *Ostrosky v. State*.⁴

Despite the benefits of free transferability, many persons remain concerned that permit transfers might result in undesirable consequences with regard to the distribution of permits. There is a concern that permits will leave the state, or that permits will disappear from isolated fishing communities which are local to a limited fishery, thereby eroding the economic base. The legislature has twice ordered studies of transferability options, first upon initial passage of the Act,⁵ and again in 1980.⁶

Because of concerns about free transferability, CFEC has produced this report so that the legislature, the administration, and other interested parties will be kept accurately apprised of the facts.

This edition covers the 65 limited fisheries for which permanent permits have been issued in the period 1975 through 2011. It contains detailed information on transfer incidence, the initial geographic distribution of permit holders, changes in the distribution of permits due to permanent transfers of permits and migration of permit holders, and the year-end 2011 geographic distribution of permit holders. Extensive information is also provided on the age distribution of permit holders, age differences between transferors and transfer recipients, rates and characteristics of intra-family and business partner transfers, permit market values, and permit acquisition and financing methods.

³ *State of Alaska v. Ostrosky*, 667 P.2d 1184 (1983).

⁴ Appeal dismissed for want of a substantial federal question, 467 U.S. 1201, 104 S.Ct. 2379, 81 LEd. 2d 339 (1984).

⁵ AS 16.43.370(b): "The commission shall study alternative methods of permit transferability and report its findings and recommendations to the legislature before January 15, 1975." The resulting report was the "Report to the Legislature on Entry Permit Transfers," CFEC, January 15, 1975.

II. TRANSFER INCIDENCE

II. TRANSFER INCIDENCE

Statewide Turnover Rates

During the period 1975-2011, 16,554 permanent limited entry permits were issued in 65 limited entry fisheries. However, not all of these permits were available for transfer. AS 16.43.250 requires that CFEC develop hardship ranking systems (“point systems”) to allocate permits, and to determine point levels at which a person would experience only minor economic hardship if excluded from an initial permit allocation. Permanent permits issued to persons classified at minor economic hardship levels are nontransferable.

A total of 14,186 transferable permits and 2,368 nontransferable permits have been issued. By the end of 2011 14,375 permits remain, 13,574 transferable and 801 nontransferable. The net reduction of 612 transferable permits is due to the cancellation of 741 transferable permits and the net addition of 129 permits that were converted from nontransferable to transferable status through the CFEC adjudication process. The net reduction of 1,567 nontransferable permits is due to the cancellation of 1,438 nontransferable permits and the net conversion of 129 nontransferable permits to transferable status through the CFEC adjudication process.

During this same time span there were 37,533 permanent permit transfers. Original permit holders transferred 11,857 permits, indicating approximately 83.6% ($11,857/14,186$) of all transferable permits had changed hands at least once by the end of 2011.

Two types of annual transfer rates are shown in Table 2-1. The first type is the ratio of the permits transferred for the first time (i.e., from initial issuees) to the number of transferable permits. This ratio would be expected to decline over time if no new permits were issued because each year there would be fewer permits still held by initial issuees. This transfer ratio has declined from 0.08 to 0.01 over the 1975-2011 time period. Over the same period, the average annual ratio of transfers from initial issuees to the sum of annual transferable permit counts is 0.03.

The second type of annual transfer rate reported in Table 2-1 is the ratio of transfers to available transferable permits, which provides a measure of the annual turnover rate for transferable permits. This ratio varied between 0.06 and 0.13 from 1975 through 2011, and averaged 0.08 for all years combined. As can be seen in Table 2-1, the ratio dropped below 0.10, and has since remained below 0.10 since 1989.

Turnover Ratios by Permit Type, 1975-2011

In Table 2-2, permit types were divided into groups based upon the year(s) in which they were limited. A summary of transfer rates is provided for each group. The first group consists of the original 19 salmon permit types for which permanent permits were first issued in 1975. The second group consists of the 6 Arctic-Yukon-Kuskokwim (AYK) salmon permit types for which permanent permits were first issued in 1976. The remaining limited herring, roe herring, shellfish, dive and sablefish permit types are also grouped by years of limitation. These permit type groupings appear in tables throughout the report.

The sum of annual permit counts represents a summation of the number of transferable permits existing at the end of each year. The summations are used to express ratios of permit transfers. These rates are comparable to the all-years statewide summary rates presented in Table 2-1.

Two measures of average annual transfer rates for individual permit types are shown in Table 2-2. The first transfer rate is calculated by dividing the cumulative total transfers from initial issues, 1975 to 2011, by the sum of annual transferable permit counts over the same period. The permit types limited in the most recent years have the highest rates of transfers from initial issues, but this rate is expected to decline over time because each year there will be fewer initial issues remaining in the permit type.

The second transfer rate is calculated by dividing all permanent transfers over the time period by the sum of annual transferable permit counts over the same period. For the second type of turnover rate (ratio of transfers to the sum of annual transferable permit counts), the transfer rates vary considerably by permit type. Some of the permit types with lower annual average rates are all of the AYK salmon permit types, most of the Westward herring permit types, the Chignik Salmon Purse Seine Permit, the Goodnews Bay Herring Gillnet permit, the Cook Inlet Dungeness Pot permit, and the Kodiak Tanner Bairdi pot gear permit for vessels up to 120 feet.

The annual transfer rate within a permit type may vary considerably from year to year. This is demonstrated in Appendix B where the number of transferable permits, the number of transfers, and the transfer rates for each year are presented for individual permit types.

Table 2-1. Permit Transfer Activity on Permanent Permits by Year

Year	Permit Types	Number of Permanent Permits *	Number of Transferable Permits **	Annual Number of Transfers From Initial Issuees	Ratio of Transfers From Initial Issuees to Transferable Permits	Total Annual Number of Transfers ***	Ratio of Transfers to Transferable Permits

Total	78	14,375	443,863	11,857	0.03	37,533	0.08

*2,393 permits have been cancelled. Except for the 214 reinstated cancelled permits, cancelled permits are excluded from the year of cancellation forward.

**741 transferable permits have been cancelled, and 129 transferable permits have been added through conversion from nontransferable to transferable status through the CFEC adjudication process.

***The number of transfers includes 344 loan foreclosures by the Department of Commerce, Community and Economic Development or by the Commercial Fishing and Agriculture Bank, and 339 subsequent transfers from these entities.

* The sum of annual permit counts is the total number of permits at the end of each year, summed over the entire period.

** The number of transfers includes permit foreclosures and subsequent transfers of these permits.

This page intentionally left blank.

III. GEOGRAPHIC DISTRIBUTION OF PERMITS, TRANSFERS AND MIGRATIONS

III. GEOGRAPHIC DISTRIBUTION OF PERMITS, TRANSFERS AND MIGRATIONS

The effects of permit transfers (change of permit holder) and migration of permit holders (permit holder remains the same but place of residence changes) are examined in this portion of the report. Statewide and fishery-specific information are provided.

Classification of Permits

Hardship ranking systems, or 'point systems', based upon past participation and economic dependence were developed for each limited entry fishery and used to allocate the original permits. The Limited Entry Act requires CFEC to determine levels within the point systems where persons would experience only 'minor economic hardship' if excluded from an initial permit allocation. Persons who receive permanent entry permits and who are ranked at or below the minor economic hardship level receive nontransferable permits, while persons who are ranked above the minor economic hardship level receive transferable permits.

Over all permit types, 16,554 permits have been issued through year-end 2011. 14,186 transferable permits have been issued to persons ranked above the minor economic hardship level (85.7%) and 2,368 nontransferable permits have been issued to persons ranked at or below the minor economic hardship level (14.3%).

In most permit types, a majority of the permanent permits were issued as transferable permits to persons ranked above the minor economic hardship level. In a few fisheries, a higher percentage of nontransferable permits were issued. For example, 312 permanent permits were initially issued in the Southeast shrimp pot fishery in 1998; 155 transferable permits (49.7%) were issued to persons ranked above the minor economic hardship level and 157 nontransferable permits (50.3%) were issued to persons ranked at or below the minor economic hardship level (Table 3-1). Table 3-1 presents the distribution of permits among resident types for transferable permits and all permits, both transferable and nontransferable, at initial issuance. Table 3-2 indicates the distribution of permits among resident types for transferable permits and all permits, at year-end 2011. Year-end holdings in the Southeast Salmon Seine permit type reflect a net decrease of 40 permits since initial issuance, of which 35 were forfeited under the Southeast Revitalization Association fleet consolidation program in 2008.

Classification of Permit Holders

In order to measure the changes in the distribution of permits, permit holders have been classified into broad categories according to where they reside. Langdon¹ divided permit holders who were residents of Alaska into those who had domiciles that were ‘local’ and those that were ‘nonlocal’ to the permit type. He further defined Alaskan domiciles as ‘rural’ or ‘urban’. Non-Alaskans were grouped as a single ‘nonresident’ category. Langdon’s conceptual categories are a useful way to examine the geographic distribution of permits. The resident types used in this report are:

ARL: *Alaska* resident of a *Rural* community which is *Local* to the fishery for which the permit applies;

ARN: *Alaska* resident of a *Rural* community which is *Nonlocal* to the fishery for which the permit applies;

AUL: *Alaska* resident of an *Urban* community which is *Local* to the fishery for which the permit applies;²

AUN: *Alaska* resident of an *Urban* community which is *Nonlocal* to the fishery for which the permit applies;

NR: *Nonresident* of Alaska;

DCCED/CFAB: Signifies permits that have been foreclosed upon by the Department of Commerce, Community and Economic Development (DCCED) or by the Commercial Fishing and Agriculture Bank (CFAB) and have yet to be transferred back to individuals.

In some cases, ARLs and ARNs will be combined into a ‘rural’ category; AULs and AUNs into an ‘urban’ category; ARLs and AULs into a ‘local’ category; ARNs and AUNs into a ‘nonlocal’ category; and ARLs, ARNs, AULs, and AUNs into an ‘Alaskan’ category.

Decision rules for designating urban/rural and local/nonlocal classifications are described in Appendix A. Urban and rural designations in this report are based upon information from Census 2000.³ For Census 2000, the Census Bureau changed its method of classifying areas as rural or urban. The Census Bureau used advances in geographic information systems (GIS) to automate the urban and rural delineation process. The Census Bureau did not automatically recognize previously existing classifications of rural or urban.

¹ Langdon, S. ‘Transfer Patterns in Alaskan Limited Fisheries’ January 17, 1980.

² The Alaska Urban Local category is not applicable for several administrative areas which have no local communities classified as urban. These include the salmon administration areas of Yakutat, Chignik, Bristol Bay, and the Lower Yukon and the herring administrative areas of Bristol Bay, the Lower Yukon, Nelson Island, Nunivak Island and Goodnews Bay.

³ The urban/rural designations are not yet available for Census 2010.

Because editions of this report prior to 2003 used 1990 census criteria, some changes have occurred in the rural/urban designations. In general, there are now more Alaska places designated as rural, and consequently more permits issued and held by rural residents.

The local/nonlocal distinction is linked to Commercial Fisheries Entry Commission administrative areas, which are based on regulatory boundaries of the fishery. Some inland communities are considered local to permit types in areas such as the Yukon River and Bristol Bay. A thorough description of local/nonlocal decision rules also can be found in Appendix A.

Before 1978, resident type classifications were based on address information provided to CFEC during the issuance, renewal and transfer of permits. Some nonresident applicants used an Alaska address, so were classified as residents. After 1978, in an effort to improve the accuracy of resident/nonresident data, CFEC renewal and transfer forms included a sworn declaration of residency. In addition, permit holders claiming Alaskan residency were required to provide a valid Alaska address. Before 1982, permit renewal forms included space for only one address. The address listed may have been a temporary mailing address near the fishing grounds. As a result, a number of fishermen could have been misclassified as local to the permit type. Data suggest the number of fishermen who may have been misclassified is relatively small, although an exact number is unknown and temporary mailing addresses have not been a major cause of erroneous resident classifications.⁴ Beginning in 1982, permit renewal forms included space for both a permanent and a temporary mailing address. For this report, residency of the permit holder was determined by the type of fee paid for the issuance or renewal of the permit, either resident or nonresident. In the event that someone other than the year-end permit holder paid the fee, the residency declaration of the year-end permit holder was used to determine residency.

Geographic Distribution of Initial Issues

Alaska residents received 81.6% (13,507 permits) of the initial allocation of permits and nonresidents received 18.4% (3,047 permits) over all permit types through 2011 (Table 3-1). Of the 16,554 permits issued, ARLs received more permits than any other resident type (7,607 permits, 46.0%). AULs received 4,316 permits (26.1%), and nonlocal permit holders (ARN and AUN) received 1,584 permits (9.6%).

⁴ The first edition of this report (1983) estimated the percentage of transfers involving permit holders who used an 'in care of' address at 2%. Since then there have been major permit file data corrections which included replacing temporary mailing addresses with permanent addresses.

The percentages of permits issued to the resident types vary widely among individual permit types and groups of permit types (Table 3-1). For example, ARLs were issued 41.7% (3,453) of the 8,290 permits in the group of original 19 salmon permit types, and 80.1% (1,774) of the 2,215 Arctic-Yukon-Kuskokwim (AYK) permits.

Geographic Distribution of Permit Holders at Year-End 2011

By the end of 2011, the distribution of permits among the resident types had changed to the levels shown in Table 3-2. Alaska residents held 76.7% (11,027/14,375) of all permits and nonresidents held 23.3% (3,348/14,375). Five permits had been foreclosed upon by DCCED or CFAB and have yet to be transferred, but are included in the totals listed for Alaska residents.

Changes in the distribution of all permits from the time of initial issue to year-end 2011 include a 29.6% (2,252/7,607) decrease in the total number of permits held by ARLs. At year-end 2011, ARLs held 48.6% of all Alaskan resident permits (5,355 out of 11,027) and 37.3% of the total permits (5,355 out of 14,375). Generally, ARLs have experienced the largest percentage decreases of transferable permits in the permit types that have been limited the longest.

The total number of permits held by AULs was 3,522 by the end of 2011; a decrease of 794 (18.4%) from the initial count of 4,316. The total number of permits held by AUNs increased 41.6% (369/886), the largest percent change of any residency type. Nonresidents also increased their holdings of permits by 9.9% (301/3047 permits) for nonresidents.

Geographic Changes in the Distribution of Permits Due to Transfer

To examine the geographical changes in permit distribution attributable to transfer activity, transfers have been divided into two groups: 1) transfers between permit holders of the same resident type and 2) transfers between persons of different resident types. Transfers within the same resident type are termed ‘intra-cohort’, while transfers between different resident types are termed ‘cross-cohort’. Cross-cohort transfers result in a change in the distribution of permits among the resident types.

A total of 37,533 transfers are organized by cross-cohort and intra-cohort categories in Table 3-3, and the actual numbers of transfers from one resident type to another are presented by year. The majority of all transfers in each year have been between persons of the same resident type. The annual percentage of intra-cohort transfers was at a high of 69.2% (537/776) in 1976 and a low of 56.5% (556/984) in 2004. Generally, the percentage of intra-cohort transfers was higher in the

early years, from 1975 to 1983. By the end of 2011, intra-cohort transfers over all years accounted for 62.1% of the total number of transfers.

Table 3-4 contains information on the intra-cohort and cross-cohort transfers for each permit type, all years combined. With a few exceptions, the majority of transfers within each permit type have been intra-cohort.

The cumulative net results of cross-cohort transfers to each resident type, by permit type, are shown in Table 3-5. By year-end 2011, the following changes had occurred in the distribution of transferable permits as a result of cross-cohort transfer activity:

1. Permits held by ARLs decreased in 29 of the listed permit types as the net result of cross-cohort transfer activity, which resulted in a statewide net decrease of 563 ARL permits (8.3% of the 6,809 transferable permits originally issued to ARLs). The Bristol Bay salmon drift and set gillnet permit types have had the largest numerical net decreases due to transfer activity (270 and 158 permits respectively). This 428 permit decrease is 33.7% of the 1,270 transferable permits originally issued to ARLs in these two permit types.
2. Permits held by ARNs increased by 284 permits due to net transfer activity, a 44.2% increase of the 642 transferable permits originally issued to this resident type. The largest net increase was in the Prince William Sound salmon drift gillnet permit type (100).
3. Permits held by AULs increased by 328 permits due to net transfer activity (10.3% of the 3,172 transferable permits originally issued to this group). The largest net gains were in the Salmon Power Troll (62), Kodiak Salmon Seine (62), SE Salmon Seine (54), and Kodiak Salmon Setnet (47), and Southeast permit types. The number of permits held by AULs decreased in 12 permit types while increasing in 40 others.
4. Permits held by AUNs have increased by 148 permits due to net transfer activity, a 18.5% increase over the 802 transferable permits initially issued to this resident type. Bristol Bay salmon drift gillnet saw the largest gain (100). 29 different AUL permit types decreased, and 29 permit types increased in AUN counts.
5. The number of permits held by nonresidents decreased by 202 permits statewide through net transfer activity, a 7.3% decrease from the 2,761 transferable permits originally issued to nonresidents. The number of transferable permits decreased in 40 of the permit types due to net transfer activity, especially the salmon power troll (139), Kodiak salmon seine (84), Cook Inlet salmon drift gillnet (70), and Prince William Sound salmon drift gillnet (60) permit types.

In 25 other permit types, the number of permits held by nonresidents increased due to net transfer activity, especially Bristol Bay Salmon Drift (158) and Set Gillnet (97), Salmon Hand Troll (43), and Peninsula/Aleutian Salmon Seine (22).

Geographic Changes in the Distribution of Permits Due to Migration

Other changes in residency patterns of permit distribution occur when permit holders move from one community to another. During the 1975-2011 time period there were 11,539 city and/or residence indicator changes that resulted in a resident type reclassification which have been defined as ‘migrations’ for the purposes of this report.

Migrations to and from each resident type for both transferable and nontransferable permits are shown in Table 3-6. In general, there appears to be considerable movement both to and from each resident type. The net results of migratory activity to each resident type over the entire period are shown by permit type in Table 3-7.

The 1975-2011 geographical shifts in the distribution of permits due to migration can be summarized as follows:

1. Statewide, the number of permits held by ARLs decreased by 945 permits as the net result of migration. Migratory activities did not affect all permit types in the same manner, however. There were ARL net decreases in 45 permit types and ARL net increases in 12 others.

The number of permits held by ARLs decreased most dramatically in the Bristol Bay Salmon Setnet (126), Lower Yukon Salmon Gillnet (118), and the Kuskokwim Salmon Gillnet (75) permit types. Some of the ARL gains through migration were made in the SE Salmon Drift Gillnet (23 permits), Cook Inlet Salmon Setnet (13 permits) and Cook Inlet Salmon Drift (10 permits).
2. The net number of permits held by ARNs increased by 1 as a net result of migration activity. Some of the ARN gains due to migration were the Lower Yukon Salmon Gillnet (36 permits) the Kuskokwim Salmon Gillnet (13 permits), and Cook Inlet Salmon Setnet (10 permits). The most notable decreases were in the Bristol Bay Salmon Drift Gillnet (32 permits), the Prince William Sound Salmon Drift Gillnet (30 permits) and both the SE Salmon drift gillnet and Norton Sound Herring Drift Gillnets (10 permits each).
3. The number of permits held by AULs decreased by 341 as the net result of migration. The decrease was largest in Salmon Hand Troll (72 permits), the Kodiak Salmon Seine (68 permits), followed by Cook Inlet Salmon Setnet (66 permits). The largest gains in AUL as a result of net migrations was in the Salmon Power Troll (30 permits), Upper Yukon Salmon Fish Wheel (15 permits) and Upper Yukon Salmon Gillnet (14 permits).

4. The number of permits held by AUNs increased by 373 as the net result of migration. There were AUN net gains in 38 permit types, most notably by 67 permits in Lower Yukon Salmon Gillnet, 50 permits in the Bristol Bay Salmon Setnet and 42 permits in Kuskokwim Salmon Gillnet. However, there were net decreases in 14 permit types, the most notable of which were Bristol Bay Salmon Drift and Cook Inlet Herring Seine (both at 17 permits).
5. Permit holders moving in and out of Alaska resulted in a net increase of 912 nonresident permits. The nonresident category shows net changes in 59 different permit types, 53 of which are net increases. The largest net increase in permits held by nonresidents was Bristol Bay Salmon Drift (119), followed by Salmon Hand Troll (115), and Bristol Bay Salmon Setnet (79). The largest decreases in the number of permits held by nonresidents as the net result of migration occurred in Southeast Salmon Drift Gillnet (7) and Sea Urchin Dive (2).

Summary of Changes in Permits Held by Resident Type

A yearly summary of the net changes in the distribution of permits by resident type as a result of transfers, migrations and cancellations is provided in Table 3-8. The cumulative effects of these changes are summarized below:

1. ARLs were initially issued 7,607 permits, (transferable and nontransferable, Table 3-1), which represented 46.0% of all permits. At year-end 2011, 5,355 (37.3%) of all permits were held by ARLs (Table 3-2), a decrease of 2,252 permits. Migration accounts for 42.0% of the decrease (945 permits) followed by cancellations (33.0% or 744 permits), and transfer activities (25.0% or 563 permits).

The annual net number of permits held by ARLs is continuing to decline, decreasing by 39 at the year's end. Before 1987, transfers accounted for most of this decline, but in more recent years, migrations and cancellations have accounted for most of the decrease.

2. ARNs were initially issued 698 permits (4.2% of all permits). By the end of 2011, the number of permits held by ARNs rose by 192 to 890 (6.2% of all permits). The net increase is due to transfer activity (284 permits) and migrations (1 permit). Cancellations reduced the number of ARN-held permits by 93 permits.
3. AULs have received 4,316 of all initial permits issued (26.1% of all permits). They held 3,522 permits at year-end 2011 (24.5% of all permits), a decrease of 794 permits. Cancellations of permits (781) have been the major factor in this decrease. Most of these cancellations were nontransferable statewide salmon hand troll permits. Nontransferable permits are normally cancelled when the permit holder dies or does not renew the permit.

Since 1975, transfer activities have resulted in a net increase of 328 permits held by AULs, while migration has resulted in a net loss of 341 permits to other resident types.

4. AUNs have received 886 (5.4%) of all initial permits issued. By the end of 2011, the number of permits held by AUNs increased by 369 to stand at 1,255 (8.7% of all permits).
5. Nonresidents received 3,047 of all initially issued permits (18.4% of all permits). At the end of 2011, nonresidents held 3,348 permits (23.3%), a net increase of 301 permits.

The overall net change in nonresident permit ownership has been influenced primarily by migration (increase of 912 permits) and cancellations (drop by 409 permits). Net transfer activity has reduced nonresident permit holders by 202 permits.

Appendix C documents initial issuance, transfer, migration, and cancellations of permits by permit type and by year for each of the resident types. An in-depth analysis of the movements of permits from ARL permit holders and from the Alaska Local permit holders (combined group of ARLs and AULs) are presented in subsequent chapters of this report.

* This table excludes 2,179 permits which were cancelled by CFEC and not reinstated, summed over the entire period.

** By 2011, the net effects of transferable and nontransferable permits changing status through the CFEC adjudication process resulted in the addition of 129 transferable permits.

* Some permit types appear as all dashes in this table since no transfers have occurred since initial issuance. If the table shows all zeros for a permit type, this indicates there were transfers but there was no net change.

IV. AGE PATTERNS AMONG PERMIT HOLDERS

IV. AGE PATTERNS AMONG PERMIT HOLDERS

A concern of the drafters of the Limited Entry Act was that permits should remain accessible to younger Alaskans. This section examines ages of permit holders, transferors, and transferees (transfer recipients) over the lifetime of the limited entry program. Excluded from the data are nontransferable permits and permits which were foreclosed upon by the Department of Commerce, Community and Economic Development (DCCED) or the Commercial Fishing and Agriculture Bank (CFAB).

Mean Age of Permit Holders, Transfer Recipients and Transferors

Annual mean ages for all transferable permit holders, transferors and transfer recipients are shown in Table 4-1. If no permits were transferred at all, the mean age of permit holders would logically increase by one year each calendar year. However, the mean age actually declined from 42.7 in 1975 to 41.0 in 1978 and remained relatively stable through 1985. Beginning in 1986, the mean age of transferable permit holders rose from 41.5 to 49.5 at year-end 2011. There are at least two possible explanations for this increase: 1) fewer transfers have occurred in recent years resulting in a reduction of younger people entering the fisheries, and 2) the average age of transfer recipients has generally increased, from a low of 32.5 in 1976 to a high of 41.1 for both 2002 and 2003.

From 1975 through 1984, the statewide annual mean age of transfer recipients was consistently between 32 and 35 years. Beginning in 1985 and continuing through 1990, the annual mean age rose to between 35 and 36 years. Between 1991 and 2003, it rose further, reaching a high of 41.1 in 2002 and 2003. Since then, the mean age of transfer recipients has been around 40.

The statewide annual mean age of transferors was highest in 1975 at 51.9 years, shortly after the first limited entry permits were issued. It decreased to 41.3 years by 1979, and then trended upward to 50.4 years in 2011.

Overall, mean ages are much greater for transferors than for transfer recipients. The age difference between transferors and transfer recipients was greatest in the early years of the limited entry program, particularly prior to 1978. Each year between 1983 and 2003 the age difference was below 10 years (in 2000 the difference was 9.95 years). Beginning in 2004 the age difference has been close to or above 10 years.

Mean Age by Permit Type

Annual mean ages for transferable permit holders, transferors, and transfer recipients in specific permit types are presented in Table 4-2. At year-end 2011, the five permit types with the highest mean ages of permit holders were the Kodiak Roe Herring Seine/Gillnet (63.0 years), Kodiak Food/Bait Herring Trawl Vessel 60 feet (61.0 years), Cook Inlet Dungeness Pot (60.8 years), Upper Yukon Salmon Gillnet (60.8 years), and the Norton Sound Herring Beach Seine (60.7 years).

Mean Age by Resident Type

The annual mean ages by resident type for transferable permit holders, transferors, and transfer recipients are presented in Table 4-3. The highest mean age for transferable permit holders in 2011 was Alaska Urban Locals (50.5 years) and the lowest was Alaska Rural Nonlocals (47.7 years).

By year-end 2011, the mean age of transferors varied by 5.3 years between resident types and ranged from 51.5 (Alaska Rural Local) to 46.2 (Alaska Rural Nonlocal) among the 5 resident type categories.

As mentioned previously, the annual mean age among all transfer recipients has gradually increased over the 1975 to 2003 time period. In 2011, the mean age of transfer recipients varied only between 38.8 (Alaska Rural Nonlocal) to 42.4 (Alaska Urban Local) among the five resident type categories.

The annual age class distributions of transferable permit holders are shown in more detail in Table 4-4. The table also lists the annual percentage each age class represents of all transferable permits held by a particular resident type (percentage of the row total). In recent years, the percentage of permit holders for the older age classes has generally increased. Mean ages for specific permit types by resident type and year are provided in Table 4-5.

Table 4-1. Mean Ages of Transferable Permit Holders, Transferors, Transfer Recipients and Mean Age Differences Between Transferors and Transfer Recipients

Year	Transferable Permits*	Mean Age**	Number of Transfers***	Transferor Mean Age**	Transfer Recipient Mean Age**	Mean Age Difference

2010	13,587	49.3	1,157	50.6	40.1	-10.5
2011	13,569	49.5	1,221	50.4	40.7	-9.7

* The number of transferable permits excludes 344 foreclosed permits, 5 of which are still held by DCCED and CFAB.

** Mean ages may be based on fewer observations than number of permits because of missing birthday information.

*** The number of transfers excludes permits with missing birthdates.

2011	3,238	49.9	371	49.6	370	40.6	

* Transferable permits exclude foreclosed permits. The transferor count represents numbers of transfers from a resident type. The transfer recipient count represents numbers of transfers to a resident type. Mean ages may be based on fewer observations than the number of permits due to missing date-of-birth information.

TABLE 4-4. Age Class Distribution of Transferable Permit Holders by Year and by Resident Type*

	Year	20 or Under	21 to 30	31 to 40	41 to 50	51 to 60	Over 60	Total

V. PERMIT TRANSFER SURVEY RESULTS

V. PERMIT TRANSFER SURVEY RESULTS

CFEC has conducted a ‘permit transfer survey’ of the parties involved in each permit transfer made since 1975. Hereafter the ‘permit transfer survey’ will be referred to as ‘survey’. The survey collects information on the relationship between transfer parties, whether the transfer was a gift,¹ sale, or trade, and for permits that were sold, the sale price and type of financing. The survey has been the source of information for CFEC permit price estimates, which are used by the Department of Commerce, Community and Economic Development (DCCED) and the Alaska Commercial Fishing and Agriculture Bank (CFAB) for fishing loan purposes.

During the period spanning 1975 to 1979, the survey was sent to all transferors and transfer recipients, but its completion was entirely voluntary and anonymous. Because many surveys were not returned, and because those that were returned could not be tied to other CFEC data, their usefulness was somewhat limited. Information from 1975 to 1979 transfer surveys is not included in this report, but may be found in the first edition published in 1983.²

In 1980 the survey was modified. It was tied to other CFEC data sources, and made mandatory for the transfer recipient to complete. In late 1983 the survey was expanded to include information from the transferor. Transfer survey results from 1980 to 2011 are presented in the following tables.

Even though the survey was made mandatory in 1980, strict enforcement of this rule did not occur until 1981. There were 140 transfers in 1980 and 15 transfers in 1981 without completed surveys. Note that in every year some transfers occurred for which a transfer survey was not completed. This accounts for the slight differences in the “Totals” columns between Table 2-1 and the tables in this chapter. The majority of transfers without surveys occur on DCCED or CFAB foreclosed permits. Overall, the surveys represent 98.4% of all transfers since 1980 (32,018 of 32,536 transfers).

Relationships of Transfer Participants

Of the 32,018 transfer surveys received during from 1980 to 2011, 38.3% (12,266) indicated a transfer between immediate family members or other relatives, and 18.5% (5,924) indicated a transfer between friends or business partners. Permit exchanges between people who appeared to have no pre-existing relationship accounted for the remaining 43.2% (13,827)

¹ Permits transferred as part of an inheritance are classified as gifts.

² CFEC “Changes in the Distribution of Permit Ownership in Alaska’s Limited Fisheries, 1975-1981,” February 1983.

transfer surveys (Table 5-1).³ Survey results from many individual permit types may differ from the all years' statewide percentages.

From 1981 to 1989 for all permit types combined, the percentage of transfers between friend/partners decreased, while from 1989 to 2011 the percentage of transfers between friend/partners has remained relatively constant. The rewording of the "Friend" category on the survey form to "Personal Friend" in October of 1983 may be responsible for part of this decrease and may also account for the relatively sharp increase in the number of transfers between persons in the "Other" category in 1984.

When transfers are organized by the resident type of the transfer recipient, considerable variation in relationship patterns is evident among resident types (Table 5-2). Almost half of the transfers to Alaska Rural Locals, for all years combined, were from immediate family members and relatives (48.2% or 4,739 transfers), which is almost double that of other resident types. In the remaining resident types, the "Other" category predominated.

Permit Acquisition Method: Gift, Sale, Trade, and Other

Under the Limited Entry Act's terms of free transferability, permits may be sold, traded, gifted or inherited, thus enabling new participants to enter a fishery. During the 1980 to 2011 time period, transfer survey responses indicated that 59.8% of transfers for all permit types were sales (19,157), 35.3% were gifts (11,298), and 1.4% were trades (455). The remaining 1,108 transfers in the "Other" category comprised 3.5% of the survey responses (Table 5-3).

The incidence of gift transactions has accounted for roughly 30% to 40% of all transfers each year since 1980. Because gifts accounted for only 21.5% of all transfer survey responses in the 1975 to 1979 time period,⁴ it has been suggested that the 1980 to 2011 percentage increase may be a result of efforts to enforce the prohibition on leasing permits. Therefore, it is conceivable that some of the "Gift" responses may represent lease arrangements or carry reciprocal expectations.

Survey results for individual permit types often differ considerably from the statewide averages. While sale transactions predominated in most fisheries, there were 13 permit types where at least half of the transfers were gifts.

³ If no transfers have occurred in a particular permit type the permit type will not be shown on the table.

⁴ CFEC "Changes in the Distribution of Permit Ownership in Alaska's Limited Fisheries, 1975-1981", February 1983.

A breakdown of acquisition methods by the resident type of the transfer recipient is presented in Table 5-4. Since 1980, 49.4% (4,852) of the Alaska Rural Locals who have obtained permits through transfer have received them as gifts. Sales have accounted for roughly two thirds of the transfers to each of the other resident types over the time period.

Permit Prices

In Table 5-5, permit prices are given by permit type and year during the period 1982 through 2011. Permit prices are derived from the monthly CFEC Permit Value Report (PVR). Excluded from the PVR calculation processes are transactions that appear to include non-measurable exchanges. These would typically be permit sales less than \$500, or subpar sales between family members. When fewer than four measurable transactions occur within a year, the four most recent transactions are selected to ensure a robust and nonconfidential estimate. All of the prices are in nominal dollars, which do not reflect adjustments for general price inflation.

Permit prices vary for the same gear type used in different areas of the state. For example, the mean price of Salmon Drift Gillnet permits varied in 2011 from \$51,700 (Cook Inlet) to \$161,600 (Prince William Sound).

The longest and most complete information on estimated permit values are in the salmon permit types. Prices in these permit types tended to increase until around 1990, then fell during the years 1993 to 2004. There has been a modest rebound in salmon permit values between 2004 and 2011.

There can be dramatic fluctuations in values for some permits during specific periods. For example, the Prince William Sound Salmon Seine permit type fell from \$273,333 in 1990 to \$13,500 in 2003; prices have since rebounded to \$140,000 in 2011. Similarly, Alaska Peninsula Salmon Drift permits fell from a mean of \$389,900 in 1993 to \$23,100 in 2003; they have since seen a comeback and have a 2011 value of \$127,800.

Financing of Permit Purchases

Transfer survey information on sources of financing used for 19,157 permit purchases is presented by permit type and year in Table 5-6. Beginning in 1990, additional data have been utilized from surveys in which more than one finance method was indicated.

Finance source data from 1980 to 2011 have been re-evaluated in the following manner:

1. Survey respondents may mark “Other” on the survey form if they feel their source of financing does not fit into the categories of personal resources, DCCED loan, CFAB loan, other bank loans, or loans from the transferor or a processor. A review of the comments associated with the surveys marked “Other” revealed that a large number of these involved unique methods of self-financing or loans from relatives or friends. Because of the strong association of the “Other” financing with that of the personal resources financing, those responses were combined and classified under a “Self/Other” category thus eliminating the nondescriptive “Other” category for the purposes of this report.
2. For surveys where two finance sources were indicated, and one of those sources was “Self/Other,” the finance source reported in tables of this study is that of the alternate (other than the “Self/Other” category). The self-financing associated with permits financed by multiple methods is primarily in the form of a down payment or interim financing. The “Self/Other” category is intended to be representative of permit purchases that are primarily financed by personal resources rather than simply purchases involving a down payment as many financing methods commonly involve a down payment.
3. Surveys involving three finance sources as well as the remainder of the two finance source surveys (i.e., those surveys that did not indicate “Self/Other”) are reported under the category of “Combination” financing in subsequent tables of this study.

Statewide, self-financing has been the predominant method of finance, accounting for 67.3% of all permit purchases during the 1980 to 2011 time period (12,890 permits). The next most important source of financing has been the loan program administered by the Alaska Department of Commerce, Community and Economic Development with 14.9% (2,850 permits).⁵ Transferors financed 5.9% (1,134 permits), banks and other private lending institutions financed 5.6% (1,070 permits), the Commercial Fishing and Agriculture Bank financed 2.5% (482 permits), and processors financed 1.1% (204 permits). The remaining 527 (2.8%) survey responses, which indicated multiple finance sources, were placed in the combination category.

Both the percentage and the number of permit sales financed by the transferor have declined significantly since 1980 (Table 5-6). In 1980, 142 transfers (27.7%) were financed by the seller; in 2011 only 2 transfers (0.3%) were seller-financed. The percentage of self-financed

⁵ The percentage of DCCED financed permits increases to 21.6% when only the purchases by Alaska residents are considered (Table 5-7).

purchases has doubled since 1980. In 1980, there were 209 (40.7%) self-financed purchases, since 2002 more than 80% of the transfers were self-financed.

Sources of permit financing by resident type and year derived from the transfer survey are provided in Table 5-7. The most commonly used methods of financing for the 13,092 permits purchased by Alaskan residents were the personal resources (Self/Other) of the transfer recipient (61.8% or 8,087 transfers) and DCCED authorized loans (21.6% or 2,827 sales). Urban Alaska residents have received 52.9% (1,496/2,827) of the DCCED loans issued to Alaskans. Nonresidents have the highest rates of self-financing (79.2%) and of financing through the transferor (8.3%) of the permit.

Foreclosures on Permit Loans

Table 5-8 shows the number of permit loans foreclosed upon by DCCED or CFAB over the 1982 to 2011 time period. By law, these are the only two lending entities that can accept a CFEC entry permit as collateral on a loan. The fewest loan foreclosures occurred in 1990, 2008, and 2011 with only two foreclosures in each of those years. The number of permits transferred to DCCED or CFAB began increasing in 1999 and spiked dramatically in 2002 with 45 foreclosures. The number of foreclosures has generally decreased each year since 2002.

Over the 1982 through 2011 period, the number of foreclosed permits was greatest for Alaska Rural Locals with 37.8% of the foreclosures (130 permits), followed by Alaska Urban Locals at 27.6% (95 permits). Alaska Urban Nonlocals and Alaska Rural Nonlocals had fewer foreclosures with 15.7% and 10.8%, respectively (54 and 37 permits). Nonresidents had the fewest foreclosures (8.1%, 28 permits). Nonresidents are not eligible for DCCED or CFAB loans, so those represented here were likely residents when they received the loan and subsequently changed residency status due to migration prior to foreclosure.

Permit sales with insufficient price information are excluded from estimates. All instances with less than four valid transactions are masked due to reasons of confidentiality. Derivation of permit values is from CFEC Permit Value Report. Begin and End indicate first and last month sales used to estimate permit values.

* The Department of Commerce, Community and Economic Development or the Commercial Fishing and Agriculture Bank (DCCED/CFAB) have transferred 339 of these permits. By the end of year 2011, 5 permits were still held by DCCED/CFAB.

**VI. PERMIT TRANSFERS FROM ALASKA RURAL
LOCALS TO OTHER RESIDENT TYPES**

VI. PERMIT TRANSFERS FROM ALASKA RURAL LOCALS TO OTHER RESIDENT TYPES

The long-term effects of limited entry on rural coastal fishing communities have been of considerable interest to the Alaska legislature, the State of Alaska administration, and the public, especially the degree to which limited entry permits have been transferred away from rural fishing communities. From 1975 through 2011, approximately two-thirds of the transfers made by Alaska Rural Locals (ARLs) have been to other ARLs. This section will present information regarding only the cross-cohort transfers from ARLs.

Transfer Activity Away From Alaska Rural Locals

For all but three years since 1994, there has been a net increase in the number of permits held by ARLs as a result of transfer activity; the exceptions were in 1996 with a net decrease of 12, in 2008 with a net decrease of two, and in 2011 there was a net decrease of five. In many earlier years, ARLs transferred more permits to other resident types than other resident types had transferred to them, resulting in an overall net decrease in ARL-held permits (Table 6-1). Through 2011, this cross-cohort transfer activity has resulted in a net decrease of 563 transferable permits held by ARLs. Each of the other resident types shows a net increase of transferable permits through their transfer activity with ARLs. The net increases were as follows: Nonresidents was 191; Alaska Urban Nonlocal was 157 permits; Alaska Rural Nonlocal was 91 permits; Alaska Urban Local was 95; and 29 for DCCED/CFAB. Note that permits held by each of the resident types may have increased or decreased in exchanges with resident types other than ARLs.

Every year from 1976 through 1989 there was a net shift away from ARLs due to transfer activity, with fluctuations of loss ranging from 10 to 94. The annual net decreases were generally smaller after the late 1980's. Since 1997 there have generally been annual net gains. The largest net increase over the 1975-2011 period occurred in 2000 when permits for ARLs increased by 49. In 2007, transfer activity resulted in a net increase of 29 permits.

Net transfer activity of ARL permits is presented in Table 6-2 for each permit type for all years combined. Similar data are presented in Appendix D by permit type and year.¹ The Bristol Bay Salmon Drift and Bristol Bay Salmon Setnet permit types have had the largest net decreases in counts of ARL-held permits due to transfer activity, 270 and 158 respectively.

¹ If there have not been any transfers of a particular permit type, that permit/fishery will not be listed on the tables.

While the Bristol Bay permit types have had the highest numerical decreases in the number of permits held by ARLs, other permit types have had larger proportional decreases. There are four other permit types (with more than four initial permits issued to ARLs), with net decreases greater than the 37.9% for Bristol Bay Salmon Drift: Southeast Alaska Salmon Seine (64.2%), Peninsula/Aleutian Salmon Drift Gillnet (63.3%), Southeast All King/Tanner pot (60.0%), and the Prince William Sound Salmon Setnet (57.1%). Transfers to the DCCED or CFAB through loan foreclosures and subsequent resale by these agencies are responsible for a net decrease of 29 ARL permits. The original salmon permit types limited in 1975 account for a net decrease of 31 ARL permits through transfer to DCCED or CFAB as well; there have been offsetting pluses and minuses in the other permit types as well, for example, the 1976 salmon permit types had a net increase of 1 in DCCED/CFAB permits, and the 1997 Dungeness permit types had a net decrease of 1 of the DCCED/CFAB holdings. A net increase in ARL permit holdings due to resale from DCCED or CFAB are seen in five of the original salmon permit types limited in 1975: the SE Salmon Drift Gillnet, PWS Salmon Seine, Cook Inlet Salmon Drift, Kodiak Salmon Beach Seine, and the Peninsula/Aleutian Salmon Setnet fisheries.

Table 6-3 provides information concerning the relationships between transfer parties for 3,131 ARL cross-cohort transfers that occurred over the 1980-2011 time period for which there were transfer surveys. The information comes from the CFEC transfer survey. As might be expected, most (62.6%) cross-cohort transfers of ARL-held permits were between persons who had no previous relationship.²

Permit Financing Methods

The methods used to acquire permits through transfers from ARLs to other resident types for the 1980-2011 period are presented in Table 6-4. Most (76.9%) of these cross-cohort transfers were sales (2,407 of 3,131) but considerable variation occurs across all limited entry fisheries. Other acquisition methods in the CFEC transfer survey include gift, trade, and other.

Transfer survey information on financing methods used in permit sales from ARLs to other resident types is provided in Table 6-5 by permit type and year. The most significant source of financing has been the personal resources of the buyer (69.8% - 1,679 out of 2,407). The percentage of each source of financing varies considerably among the fisheries, however.

² The relationship question in the Transfer Survey form was reworded in October 1983 from “friend” to “personal friend.” This rewording may be responsible for part of the increase in the percentage of “other” responses after 1983.

The survey information also indicates that since 1984 there has been a dramatic decrease in the number of sales of ARL-held permits financed by the transferor. There have not been any transfers of ARL-held permits financed by the transferor since 1995.

**VII. PERMIT TRANSFERS FROM ALASKA LOCALS TO
OTHER RESIDENT TYPES**

VII. PERMIT TRANSFERS FROM ALASKA LOCALS TO OTHER RESIDENT TYPES

Alaska Local permits, which are the combined permits from Alaska Rural Local (ARL) and Alaska Urban Local (AUL) resident types, are the focus of this section. Alaska Local permits are defined as those permits held by persons who reside in the area near a limited fishery. Since 1975, 79.0% (16,122 transfers of 20,401) of all transfers from Alaska Locals were made to other Alaska Locals. The remaining 21.0% (4,279 transfers) were made to other resident types (Table 3-3). Tables in this chapter provide information on the cross-cohort transfers between Alaska Local permit holders and other resident types. They are similar to tables in the previous section on Alaska Rural Locals.

Transfer Activity Away From Alaska Locals

Over the 1975-2011 time period Alaska Locals transferred 4,279 permits to other resident types (Table 7-1). Alaska Locals received 4,044 permits from other resident types, which resulted in a net decrease of 235 locally held permits. Total net decreases were greatest in the years 1979 through 1986. Since 1997, the annual net shift of permits held by Alaska Locals has been positive each and every year.

In the 1975 to 2011 time period, the total net increases to other resident types due to transfer activity with Alaska Locals constituted 136 permits to Alaska Urban Nonlocals and 107 permits to Alaska Rural Nonlocals. For permits transferred to Nonresidents from Alaska locals, there was a net increase in the late 1970s through the mid 1990s; each year since 1997, except for 2009 when the net shift was only two, there has been an annual decrease. As of 2011 there was a total net decrease of 42 permits held by Nonresidents. DCCED or CFAB permit-loan foreclosures and subsequent resale by these agencies are responsible for a total net decrease of 34 Alaska Local permits.

The cumulative numbers of transfers to and from Alaska Local permit holders are presented for each permit type in Table 7-2, and by permit type and year in Appendix E.¹ By the end of 2011, transfer activity resulted in a net decrease of permits held by Alaska Locals in 25 permit types and net increases to Alaska Locals in 36 permit types. Nine fisheries experienced a total net effect of zero as of 2010.

¹ Note that if there have not been any transfers for a particular permit type, that permit type will not be listed on the tables.

The greatest net decreases in the number of permits held by Alaska Locals have been in the Bristol Bay Salmon permit types (428 permits), the Peninsula/Aleutian Salmon Permit types (85 permits), and the Prince William Sound Salmon permit types (108 permits).

The Salmon Power Troll permit type showed the largest net increase (132 permits) to Alaska Locals, followed by the Cook Inlet Salmon Drift (72 permits) then the Kodiak Salmon Seine (49 permits).

The relationship between transfer parties by permit type and year is presented in Table 7-3. Statewide, 64.0% of the survey responses indicating transfers from Alaska local residents to other resident types during the 1980 to 2011 period were between people who had no pre-existing relationship (2,246 out of 3,507).²

Permit Financing Methods

Transfer acquisition methods are presented in Table 7-4. From 1980 to 2011, 75.9% of the transfers from Alaska locals to other resident types recorded on surveys were sales (2,662 of 3,507 transfers). Therefore, cross-cohort transfers appear more likely to be transfers between people without a pre-existing relationship and are more likely to be sale rather than gift transactions.

Sources of permit financing are shown in Table 7-5 for 2,662 purchases where nonlocal buyers acquired permits from Alaska locals. For all permit types combined, 75.5% of the permit sales from 1980 to 2011 were financed through the personal resources of the transfer recipient. This figure is higher than the amount of self-financing by transfer recipients over all resident types (67.3%), reported in Table 5-7.³ Both tables indicate that since 1980 the use of personal assets to buy permits continued to increase.

² The relationship question in the Transfer Survey form was reworded in October of 1983 from “friend” to “personal friend.” This rewording may be responsible for a portion of the increase in the percentage of “other” responses.

³ Note that Table 5-7 includes both cross-cohort and intra-cohort permit purchases for each resident type.

VIII. MULTIPLE PERMIT HOLDINGS

VIII. MULTIPLE PERMIT HOLDINGS

Consolidation Efforts

Salmon prices declined dramatically in the early 2000's, reducing the value of the salmon fisheries and creating concern for the future economic viability of the industry. As a result, fishermen and policymakers explored many options for restructuring the fisheries. One such effort was implemented in 2002, when the Alaska Legislature passed House Bill 286, which amended Alaska Statute 16.42.140 (c). The law allows individuals to hold two salmon limited entry permits in the same fishery. The permits may be either limited entry or interim-use permits. The law specifies that individuals who hold two salmon limited entry permits are allowed to fish only one of the two permits. This prohibition, however, was supplanted under specific circumstances by House Bill 251, which was passed in 2006. This law gives the Alaska Board of Fisheries the authority to grant fishing privileges to the 2nd permit held by an individual (see stacked permit operation section below).

Although much of the initial interest in presenting the bill was centered on fishing activity in Bristol Bay, the bill was introduced as applicable to all CFEC limited entry permits. By the time the bill was signed into law in the same year, it had been modified to apply to salmon permits only.

The provisions were designed to assist fishermen in several ways. The law would allow individuals to purchase and hold a permit at times that are opportune to them. It would also allow families to acquire permits and hold them until their children become of age to fish them. And finally, the law would allow a flexible and voluntary means of fleet consolidation.

Table 8-1 tabulates year-end counts of individuals who hold two permits in the same salmon permit fishery. Note that this table differs from those in previous chapters, as permit holders are counted rather than permits. The percentages in Table 8-1 represent the proportion in each category of all permit holders in the entire fishery. For example, the table indicates that at year-end 2011, there were 95 permit holders who each held two permits in the Bristol Bay Salmon Set Gillnet fishery. This represents 10.7% (95/886) of all the permit holders in the fishery. In 2011, there were some salmon permit fisheries where no individuals held two permits. The total count of permits can be calculated by adding the number of permit holders and the count of permit holders with second permits.

Stacked Permit Operation

As mentioned above, in 2006 AS 16.05.251 was amended, granting the Alaska Board of Fisheries authority to adopt regulations to allow additional fishing privileges to permit holders who hold two permits in a salmon permit fishery. A 'stacked permit operation' consists of one individual holding two permits in a salmon fishery; this person is allowed to fish two legal units of gear, effectively fishing 'both' permits at the same time. The stated purpose of the amendment was to achieve efficiencies, successfully address market forces, and allow underutilized permits to become fully active in the fisheries.

To date, the Board has authorized stacked permit operations in the salmon set gillnet fisheries in Kodiak, Cook Inlet, and Bristol Bay. The Kodiak regulation went into effect in 2008, with a clause for it to sunset at the end of 2010, unless re-authorized by the Board.¹ At the 2011 Kodiak Finfish meeting, the Board decided to allow the sunset provisions to prevail, effectively returning the fishery to its former status, where a permit holder is restricted to fishing one legal unit of gear. Individuals were still allowed to own two permits in the fishery, but no additional gear was authorized. Permit acquisition statistics for the Kodiak fishery are outlined in Table 8-2.

The Board passed similar regulations allowing stacked permit operations for the Bristol Bay (2010) and Cook Inlet (2011) Set Gillnet fisheries.² Tables 8-3 (Bristol Bay) and 8-4 (Cook Inlet) provide details on the permit acquisitions in these respective fisheries. The Bristol Bay regulations were written with a clause that calls for the rules to sunset after the 2012 season, unless re-authorized by the Board. The Cook Inlet regulations do not have sunset provisions.

The ability to hold a second permit is generally not exercised except when the permit holder is granted the opportunity to use the second permit. This is noticeable in the Kodiak Set Gillnet fishery, where stacked permit operations occurred from 2008 to 2010. The number of individuals with multiple permits jumped from 1 in 2007 to 25 in 2008. In 2010, 38 individuals held multiple permits. At the end of 2010, the ability to fish the second permit ended and by the end of 2011 there were only 4 individuals with a second permit. The majority of individuals with second permits in Kodiak during this time were either Alaska Urban Locals or Nonresidents. Likewise in the Bristol Bay Salmon Set Gillnet permit fishery, in 2009 only 3 individuals held multiple permits. Starting in 2010 the ability to fish the second permit was granted and the count of individuals with multiple permits was 55. This number almost doubled in 2011 with 95 individuals holding a second permit. Of the Bristol Bay second multiple permit holders, the majority were either Alaska Urban Nonlocals or Nonresidents. Cook Inlet, which is the third area where multiple permit holdings are fished, has increased the number of individuals who hold a second permit 11 fold, from 4 in 2010, to 44 in 2011 when regulations permitted the use of the second permit. Most of the individuals in Cook Inlet with a second permit are local to the fishery.

From 2011 to 2013, 5 AAC 21.331 (i) allows an individual who owns two S 03H(Salmon Drift Gillnet Cook Inlet) permits the ability to double the amount of gear in operation from an aggregate of 105 fathoms of net to an aggregate not to exceed 210 fathoms.

APPENDIX A.

**DECISION RULES USED TO DESIGNATE
URBAN, RURAL, LOCAL, AND NONLOCAL**

APPENDIX A. DECISION RULES USED TO DESIGNATE URBAN, RURAL, LOCAL, AND NONLOCAL

Urban and rural designations are based upon information from Census 2000. Because previous editions of this report used 1990 census criteria, some changes have occurred in the rural/urban designations. In general, there are now more Alaska places designated as rural, and consequently more permits issued and held by rural residents.

For Census 2000, the Census Bureau significantly changed its method of classifying areas as rural or urban. The Census Bureau did not automatically recognize previously existing classifications of rural or urban. The Census Bureau used advances in geographic information systems to automate the urban and rural delineation process.

Urban and Rural Classification

For Census 2000, the Census Bureau classifies as "urban" all territory, population, and housing units located within an urbanized area or an urban cluster. It delineates these boundaries to encompass densely settled territory, which consists of:

1. Core census block groups or blocks that have a population density of at least 1,000 people per square mile and
2. Surrounding census blocks that have an overall density of at least 500 people per square mile

The Census Bureau's classification of "rural" consists of all territory, population, and housing units located outside of urbanized areas or urban clusters. Geographic entities, such as census tracts, counties, metropolitan areas, and the territory outside metropolitan areas, often are 'split' between urban and rural territory, and the population and housing units they contain often are partly classified as urban and partly classified as rural.

Local/Nonlocal

1. On the coast, local/nonlocal boundaries are linked to Commercial Fisheries Entry Commission administrative areas which are based on ADF&G salmon management areas. Exceptions include communities that have been within more than one ADF&G management area as a result of the movement of ADF&G boundaries since 1975. These communities have been made local to both areas (see below). In addition, Cape Yakataga and Port Heiden are 'overlap' areas belonging to two ADF&G Salmon

Management Areas and therefore more than one CFEC administrative area. Residents of these two areas will be local for both relevant overlap areas. Lastly, residences in both Southeast and Yakutat are designated local to the hand and power troll gear fisheries.

**Communities Local to More Than One
Alaska Department of Fish and Game Management Area**

Community	ADF&G Salmon Management Areas
Port Heiden	Bristol Bay/ Peninsula/ Aleutians
Cape Newenham	Bristol Bay/Kuskokwim
Cape Romanzof	Kuskokwim/ Lower Yukon
Chevak	Kuskokwim/ Lower Yukon
Hooper Bay	Kuskokwim/ Lower Yukon
Igiak	Kuskokwim/ Lower Yukon
Scammon Bay	Kuskokwim/ Lower Yukon
Aguikchuk	Kuskokwim/Nelson Island/Nunivak Island
Anogok	Kuskokwim/Nelson Island/Nunivak Island
Cheformak	Kuskokwim/Nelson Island/Nunivak Island
Inger	Kuskokwim/Nelson Island/Nunivak Island
Itulilik	Kuskokwim/Nelson Island/Nunivak Island
Kipnuk	Kuskokwim/Nelson Island/Nunivak Island
Mekoryuk	Kuskokwim/Nelson Island/Nunivak Island
Nash Harbor	Kuskokwim/Nelson Island/Nunivak Island
Nelson Island	Kuskokwim/Nelson Island/Nunivak Island
Newtok	Kuskokwim/Nelson Island/Nunivak Island
Nightmute	Kuskokwim/Nelson Island/Nunivak Island
Toksook Bay	Kuskokwim/Nelson Island/Nunivak Island
Tununak	Kuskokwim/Nelson Island/Nunivak Island
Cape Yakataga	Prince William Sound/ Yakutat
Pikmiktalik	Lower Yukon/Norton Sound
St. Michael	Lower Yukon/ Norton Sound
Stebbins	Lower Yukon/ Norton Sound

2. The Upper and Lower Yukon and Kuskokwim River fishery areas are based on immediate river drainages. The Lower Yukon area extends up the Yukon River to just above Holy Cross. The Upper Yukon "local" area extends up the Koyukuk tributary as far as Huslia, the Chandalar as far as Venetie and the Tanana to Delta Junction, 30 miles beyond the upper limits of commercial fishing on that river. The Kuskokwim local area extends 30 miles upriver beyond the limit of commercial fishing on that river and includes the Stony River tributary as far as Lime Village and the Holitna River as far as Kasheglok.
3. The Bristol Bay area extends inland up the Nushagak River and includes the entire Tikchik Lake system as well as Lake Iliamna and Lake Clark.
4. The Cook Inlet local area includes all but the eastern edge of the Anchorage Borough. The line dividing the Cook Inlet and Prince William Sound ADF&G regulatory areas is extended inland directly north. That is, the line runs from Cape Fairfield at 148°50'W,

north to 61°32'N (just north of Bodenbug Butte and south of Palmer) and then west to 150°30'W (to the community of Susitna) and thereafter follows, at a little distance inland, the western shore of Cook Inlet, ending at Cape Douglas.

5. The Prince William Sound area extends up the Copper River to the confluence of the Bremner River, taking in the census subareas of Prince William Sound and Cordova, but not the Copper River subarea. It excludes the interior Copper River as well as the Edgerton, Richardson and Glenn Highway communities.
6. Local/Nonlocal boundaries for the westward herring fisheries are based on ADF&G regulatory districts rather than ADF&G Salmon Management Areas. Herring stocks in western Alaska are managed and permitted specific to these districts. The local definitions for these fisheries are based on the districts as defined in (5 ACC 27.875 and 5 ACC 27.905) ADF&G Commercial Herring Fishing Regulations and extend 30 miles beyond those district boundaries. The districts therein are defined as waters bounded by specified coastline features or latitudes. The local/nonlocal definition includes population centers on the coast within those boundaries as well as within a 30-mile radius extending inland and beyond the northern and southern district boundaries. Because the Nelson Island and Nunivak Island districts overlap with respect to latitude and because pre-limitation permitting combined these fisheries, they will share the same local communities for the purposes of this study.

The following tables show those towns that are classified as Rural and Urban in Census 2000.

Rural in 2000, Urban in 1990				
Adak	Fritz Creek	Nikishka	Ridgeway	Sterling
Chatanika	Homer	Nikiski	Salamatof	Two Rivers

ARN - Alaska Rural Nonlocal

AUN - Alaska Urban Nonlocal

NR - Nonresident

DCCED/CFAB - Department of Commerce, Community and Economic Development/Commercial Fishing and Agriculture Bank

* Alaska Local permit holders include both Alaska Rural Local and Urban Local resident types.

** Nonlocal net shift is the summation of ARN, AUN and DCCED/CFAB (excludes NR) resident types.

This page intentionally left blank.

APPENDIX F.

**PERMIT FISHERY ORDERING AS FOUND IN THE
CHANGES IN THE DISTRIBUTION OF ALASKA'S
COMMERCIAL FISHERIES ENTRY PERMITS**

APPENDIX F. PERMIT FISHERY ORDERING

Many of the tables in this publication present data on individual permit types. These tables are organized in one of two ways: the permit types are classified by the year in which the fishery was limited (e.g. Tables 2-2 and 3-1), or they are classified by geographic region, species, and then year (e.g. Tables 4-2 and 4-5).

The Table below shows the ordering of permit types in the second method of classification. Each permit fishery is associated with a CFEC permit code, which is also shown.

Order	Permit Fishery	Permit Fishery Description	Fishery Code
1	Salmon Power Troll	Statewide Salmon Power Troll	S15B
2	Salmon Hand Troll	Statewide Salmon Hand Troll	S05B
3	SE Salmon Seine	Southeast Salmon Purse Seine	S01A
