## 10 Changes in the Distribution of Sablefish QS by State

Tables 10-1 and 10-2 examine QS holdings based upon the US state of residence for QS holders. These tables show how the distribution of sablefish QS holdings changed by state from initial issuance through year-end 1997. The state of residence for QS holders is based upon NMFS-RAM records of current mailing addresses. ${ }^{1}$

At both initial issuance and at the end of 1997, persons from Washington held the highest percentage of QS in all IFQ areas except Southeast. By the end of 1997, Washington residents had slightly increased their QS holdings in the West Yakutat area and had slightly decreased their QS holdings in all other areas.

The percentage of QS held by Alaskans in each area at the end of 1997 ranged from $25.8 \%$ in the Western Gulf area to $64.9 \%$ in the Southeast area. Sablefish QS holdings by Alaska residents have increased slightly in all management areas since initial allocation. The percentage increase in sablefish QS held by Alaska residents ranged from $0.2 \%$ in the Southeast and West Yakutat areas to $18.1 \%$ in the Aleutian Islands.

In all areas, the QS holdings of persons from Oregon and other states were small relative to the QS holdings of persons from Washington and Alaska.

Table 10-2 shows the state of residents for QS holders. In the Southeast, West Yakutat, and Central Gulf areas the majority of QS holders were from Alaska, both at initial issuance and at year-end 1997. Nonresidents of Alaska made up the majority of the QS holders in the Western Gulf, Aleutian Islands, and Bering Sea areas at both initial issuance and year-end 1997.

Since initial issuance, the overall number of QS holders has dropped in all areas. With this drop in the number of QS holders there was a corresponding increase in the average size of QS holdings in each IFQ management area for residents of most states.

Average QS holdings vary considerably among persons from different states within a management area. For example, in the West Yakutat area, Alaska residents received average initial allocations of 73,943 QS units, whereas Oregon residents received average initial allocations of 109,134 QS units, and Washington residents received average initial allocations of 191,608 QS units.

[^0]:    ${ }^{1}$ NMFS-RAM is maintaining data only for current addresses in their computer files; however, CFEC has retained year-end 1995, 1996, and 1997 addresses of persons from former NMFS-RAM databases. As a result, the year-end address assignments for persons are based upon their respective addresses as of January 1, 1996, December 31, 1996, and January 2, 1998.

    Note that the total number of initial QS recipients in the tables in this chapter may be greater than the number of unique QS recipients for the area as shown elsewhere in this report. This is because some persons received separate initial allocations over the 1995 to 1997 period, and had different addresses and were classified into different resident categories at different points in time.
