## 10 Changes in the Distribution of Sablefish QS by State

Tables 10-1 and 10-2 examine QS holdings based upon the US state where QS holders reside. These tables show how the distribution of sablefish QS holdings changed by state from initial issuance through year-end 1998. The state of residence for QS holders is based upon NMFS-RAM records of current mailing addresses. ${ }^{67}$

At both initial issuance and at the end of 1998, persons from Washington held the highest percentage of QS in all IFQ areas except Southeast. By the end of 1998, Washington residents had slightly increased their QS holdings in the Southeast, West Yakutat, and Western Gulf areas and had slightly decreased their QS holdings in all other areas.

The percentage of QS held by Alaskans in each area at the end of 1998 ranged from $23.2 \%$ in the Western Gulf area to $62.1 \%$ in the Southeast area. Sablefish QS holdings by Alaska residents have increased significantly in the Central Gulf, Bering Sea, and Aleutian Islands management areas, and have decreased in the other areas.

In all areas, the QS holdings of persons from Oregon and other states were small relative to the QS holdings of persons from Washington and Alaska.

Table 10-2 shows similar information as Table 10-1, except it examines the number of QS holders instead of the amount of QS. In the Southeast, West Yakutat, and Central Gulf the majority of QS holders were from Alaska, both at initial issuance and at year-end 1998. Nonresidents of Alaska made up the majority of the QS holders in the Western Gulf, Aleutian Islands, and Bering Sea areas at both initial issuance and year-end 1998.

Since initial issuance, the overall number of QS holders has dropped in all areas. With this drop in the number of QS holders there was a corresponding increase in the average size of QS holdings in each IFQ management area for residents of most states.

Average QS holdings vary considerably among persons from different states within a management area. For example, in the West Yakutat area, Alaska residents received average initial allocations of 73,978 QS units, whereas Oregon residents received average initial allocations of 109,134 QS units, and Washington residents received average initial

[^0]allocations of 192,088 QS units. In all areas except Southeast, persons from Washington held the highest average amounts of QS, both at initial issuance and at year-end 1998.

Table 10-1. Initial Allocation and Year-end 1998 QS Holdings by Area and State

| Area | State | Initial Amount of QS | $\begin{array}{r} 1998 \\ \text { Amount } \\ \text { of QS } \end{array}$ | Initial Pct. of Area QS | $\begin{array}{r} 1998 \\ \text { Pct. of } \\ \text { Area QS } \\ \hline \end{array}$ | Change in Total QS | Percent Change in Total QS |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Southeast | Alaska | 42,740,595 | 40,944,080 | 64.3 | 62.1 | -1,796,515 | -4.2 |

[^0]:    ${ }^{67}$ NMFS-RAM is maintaining data only for current addresses in their computer files; however, CFEC has retained 1995 through 1998 year-end addresses of persons from former NMFS-RAM databases. As a result, the year-end address assignments for persons are based upon their respective addresses as of January 1, 1996, December 31, 1996, and January 2, 1998.

    Note that the total number of initial QS recipients in the tables in this chapter may be greater than the number of unique QS recipients for the area as shown elsewhere in this report. This is because some persons received separate initial allocations over the 1995 to 1998 period, and had different addresses and were classified into different resident categories at different points in time.
